Try checking around your house for interference. Most likley.... Water bed or fish tank heater, Light dimmers, Street lamp. Get a portable am radio. Set it on a week station. Then walk around your house & neighborhood. When you find the source of the noise it should be heard on the portable.

Yaesu's CT-44 speaker/mike adapter will work with the ICOM Q7A;
therefore, you can use any Yaesu, Icom, or Standard speaker mike with
the Q7. I have the CT-44 adapter and the Yaesu MH-18A2B speaker-mike,
and it all works on the Q7.

Exactly..... nobody is forced to learn code.... That's why we have a "No Code Tech"..... I suspect this "Code Problem" has more to do with "Ego" than anything else! If I can't have an Extra licence then nobody should! If I can't learn code then we should get rid of code! If people work hard they should be rewarded! Those people who have their General, Advanced & Extra worked for it....It was not given to them. The "Dumbing Down of Amateur Radio" would be a great mistake.

My Opinion,
Don, W6IQ

meltonj@mindspring.com (Jim Melton) writes:
>I don't believe the FT-51R has simultaneous VHF/UHF receive. For me that's
>enough to make me want to look elsewhere.

You must be thinking of the FT-50, which is a single-receiver radio
that covers 2 bands. But the FT-51 is a full dual-band radio. It can
receive one VHF and one UHF frequency simultaneously. It can do cross-band
repeat, either one-way or bidirectional. It can also receive two VHF
channels at once, or two UHF at once, but there is some loss of flexibility
and sensitivity when using the VHF "side" for UHF reception or the UHF
side for VHF reception. And only the VHF side can do AM receive, so
you can't receive two air band signals at once.

Except for a few operating features (crossband repeat, duplex operation,
sub-channel muting), the radio behaves like two completely independent
radios in one box. Each side has its own memories and its own VFOs,
its own volume and squelch settings. Each side will scan independently
of the other side.

>I know the specs say that the AT-600 has simultaneous VHF/UHF receive.
>But, can the receiver scan out-of-Ham-band VHF frequencies (specifically
>159 to162MHz) while _simultaneously_ monitoring a single 450MHz Ham band
>frequency?

I can't tell you whether the AT-600 can do this. The FT-51 can.

Dave

12. FS: AM B'cast modulation monitor, mint!

```
TFT model 753, rack mount, large, lighted, mod %
meter, still FCC type accepted.
Covers AM broadcast band and SW. Makes a great
mod monitor for that
AM rig! Hi Fi monitor audio audio output, 0.15%
max distortion. This is a high end
modulation monitor still used in commercial
broadcast stations. Needs a small
RF sample coupled into it for operation. Works
well on 160, 80, 40, 20 M !!
Very sharp looking....
Some specs:

Reads -100% to +133% with 1% accuracy
freq response 20 Hz to 25 KHz, demodulated audio
out
peak indicator adjustable 30% to 150%
S/N ratio >75dB
Power required 117 VAC, 50/60 Hz 2.5A max
Mounting 19" rack, 51/4" high, 14" deep

With original manual, $249 shipped to lower 48

73,

Chuck...K1KW
```

When I first got my ticket - I thought there was no use for CW either. Then 10mtrs closed and it was all that was left. I sat and listened to 40mtrs - learned cw and started to enjoy it. Now can send and recieve over 30wpm by hand. Once you learn it you will enjoy it. Or at least that's the way it worked here.

Hopefully, it will not be dumbed down. Reducing the Morse code
requirement is certainly not a cause of dumbing down. That simply
eliminates a jump-through-the-hoop exercise which allowed some folk
to substitute a skill unrelated to electronic knowledge, for
electronic knowledge, thus contributing to dumbing down.

I'm auctioning about 10 sets of Labtec C-324 Boom-Mic Headsets on Ebay at

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=23684627

The audio and mic response is great. You'd probably have to change the mic plug before you could key a transmitter, though.

They are both good, serviceable units with no major problems and you will probably be happy with either. There are of course feature differences, but only you know what is important to you. I doubt that anyone on the list will be able to tell you which unit happens to be 'better' for your specific use.

Sorry if this isn't much help, but with a question as generic as 'which is better' there isn't much to go on in the way of providing advice...

Certainly, it would be a "dumbing down". The fact that you think it is "a skill unrelated to electronic knowledge" has nothing to do with it.

Amateur Radio is a hobby which has several levels, like many organizations you may choose to belong to. Requiring extra effort or special skills is a part of life, so why "dumb it down" by giving "membership" to everyone equally?

There are some defunct forms of government that believed in the "commonality" of all citizens. Don't you get it? America is great because its people are challenged to do better, in everything they do. This includes the pursuit of hobbies. Those who stand out should be rewarded. I wouldn't want the anonymous "sameness" of members of certain organizations who wear hoods, for example.

I will be responsible for my failures, and expect rewards for my successes!!

22. Re: Opinions on Kenwood TM-G707 dual-band mobile?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-01 00:00:00 UTC
From: Rick Pemble <pemble@ix.netcom.com>
Message-ID: <6pvre9$rjo@dfw-ixnews10.ix.netcom.com>
Source record: 136174

I bought a TM-G707 last week. I also own a TM-V7A. The TM-V7A is only $50 more.
I bought the TM-G707 thinking that it was a V7A with a different display (V7A is BLUE and 707 is AMBER). In fact, it is
quite a bit "dumber" than the V7A. It is a nice radio, but for another 50 bucks, you can have simultaneous dual band operations, simultaneous memory name/freq display, cross band repeater op, etc.

For me, I like them both. The TM-V7A is a little too complicated for mobile use (for an old fart like me), I have it mounted in my shack and like it FB. The G707 is mounted in the car and I think it is perfect for mobile use -- nice and simple, no worry about fiddling with the controls while going 85MPH down I-95.

So, compare the two and consider what your needs are -- I don't think you can go too wrong with either.

cheers

Rick W4RP

Just cleaning out the shack, stuff I'm no longer using. I have THREE (sell
all 3, will not break up),
Two Hour "AA" Nickel-Cadmium Battery Chargers. Each unit will charge 2 or 4
at a time. Will work with Ni-Cads up to 650 mah capacity (will not work with
Metal-Nickel Hydride batts). Lightly used, and all come in org
boxes,manuals. Radio Shack model # 23-234.(org price was $ 14.99 each)
Will sell ALL 3 for $ 22.00, and
I will ship UPS for that too (ground,USA, lower 48 only).

I should have been more specific... quality wise - which one is
better. Feature is secondary.

Yes, you can run Pactor on the TS847, but if you use the coupling capacitor suggested on the print in the manual, it may not work. I used the suggested 10 Mfd Cap and it did not work!! I ended up with using a .01 Mylar cap, works great with my AEA Pk900. I love this radio, works great.....

29. Yaesu FT-8500 DTMF Paging ???

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-01 00:00:00 UTC
From: boleyd@myself.COM
Message-ID: <35C39231.85EFDEDD@myself.com>
Source record: 136181

When using the DTMF paging on the FT-8500 the unit remains in paging mode after receipt of a valid page. In effect it goes into DTMF Code Squelch Mode by default. This forces the sending station to preceed its transmissions with the 3 digit page code each time it sends. The more rational action would be to revert to normal mode (no special paging or code squelch) and allow transmissions to proceed without the need to be preceeded by 3 DTMF digits.

If you remember to disable paging mode MANUALLY, after receipt of a page the of course, normal transmission can occur without involving the 3 digit DTMF stuff.

Any ideas on how to get it to go to normal, non-page-mode, after receipt of a valid page???

> special skills is a part of life, so why "dumb it down" by giving
> "membership" to everyone equally?

There is no need to do this. However, there is a need to ensure that any
testing is appropriate for the privileges granted by the licence.

Sure, have Morse testing, if you want, but make sure it grants Morse rights
only. Sure, restrict access to HF, if you want, but make sure the test for
access deals specifically with HF issues. Sure, make the exams as hard as you
like, as long as you can justify the level of the exam compared to the licence
conditions.

This is appropriate testing, this is what AR needs. It doesn't need to "keep
the standards", it needs to fix them up by, for a start, putting sense into
the licence system.

Mark.

The extra effort must be relevant. Else why not just require all
hams run a marathon before membership. Let the the extra effort
be in electronics knowledge, not an obsolete communications skill.

If all one knows about a person is his level of Morse code skill,
one can say absolutely nothing valid about his dumbness level.
Some of the dumbest hams I know are CW whizzes and because of
that, don't even realize how dumb they really are.

Not because Grandpa did it but because it is required by the Fcc or is it that you don't think you should learn morse code ? remember when all else fails code gets thru. Be happy that the ARRL has requested a change in the Lic system and now General or class C ops will only have to know 5WPM code and extra 12WPM will that make you happy ?
Seems you just want something for nothing....maybe we should lower the standards to become a pilot too.

Message-ID: <01bdbda7$745a3960$3f438cd1@dano>
Source record: 136189

Well, if the older models are anything like the new stuff, read below...

My brother has an Icom W21AT. It was alot more expensive than my FT530. A guy can barely figure out how to program a freq. in the vfo without the book. The buttons are so tiny, that I have to use a pencil or similar to push them. IMHO I feel that the Yaesu radio is going to be alot better radio for the money. Quality-wise, Icom vs. Yaesu portables are propably nearly the same. Icom's just alot more money.

If you want customer service after the sale, buy a Yaesu. From what I have seen here on the news groups, Icom's service leaves alot to be desired. I had to send my FT5100 and my FT530 both in for service. FT5100 was a warranty problem, the FT530 was operator error. Both radios were sent at different times and both arrived back and repaired in exactly 14 days as Yaesu promised. To make things even better, Yaesu fixed the broken keypad(my fault) on the FT530 at no cost and replaced several items that were revised on later models. ALL AT NO COST TO ME!
Now that IS customer service.

A friend and I setup a new type of On-Line Hamfest recently. It is currently free since we are still working on it. It allows you to list items for sale in a Hamfest-like enviroment.

Instead of only allowing a listing of one item or so like most on-line auctions do, we allow you to setup a table. A table can contain a bunch of different items--much more like a real hamfest. This site will be open to amateurs and non-amateurs, but we are modeling the site more for the amateur community in hopes that it will help out the hobby.

Please come and visit the site. It is all free for now. Once we finish this we will probably start to charge for listings, but we don't think it is right to charge for a system that might have bugs in it! We urge you to setup a table and start visiting the site often. The more people we can get to use this, the better the system will become. Don't forget to send us some feedback while you are there!

Hamfest-Online
http://www.hamfest-online.com/

We have worked long and hard on this site, and we hope you will find it useful. This is only a side project of ours, as we will be going off to college in the fall, we want to make sure that the system is as good as it can be before we have no time to work on it again! Let us know what you think.

And while we're at it, we ought to add testing for proper buggy-whip
usage to our driver's license test.

Please spare the me "when all else fails, CW get's through" argument.
There are much more efficient modulation methods with superior
performance than CW. Of course, you can't build them with just
spark-gap transmitters or vacuum tubes, so I guess they don't count.

Is it really all that bad to change the license structure and testing
requirements to reflect the world we actually live in these days (and
I mean outside of Amateur Radio, too)?

What "license conditions" would warrant greater difficulty in the
electronic theory exam?

If it requires evidence of more brain power to operate a store-bought
rig at 440MHz than to operate a store-bought rig at 3920 KHz, then the
Tech license exam should be harder than the General.

Knowledge of operating conditions and anomolies comes with experience,
not studying material in manuals.

The need for advanced technical knowledge went away with the
availablilty of the Far East "rig of the month club", when Kenwood,
Yaesu and Icom turned amateur radio into a consumer-marketing
playground.

There is still a need to recognize greater levels of accomplishment in
the Amateur Radio art. The CW requirement certainly helps identify
those who felt the need to advance further beyond the beginner novice
stage. Since most technical advancements in communications today are
now the result of laboratory engineering, should we require a BSEE, an
MSEE and a Doctorate as evidence of higher "license conditions"??

That's how it happened to me. Once I took the 15-20 min a day to really learn it, I really enjoyed it. My radio doesn't even have a voice mode.

> to them.

Here is one for cross band repeat:

1. Lock Keyboard, then power off
2. SQL+MAIN+BAND+POWER ON.
3. Unlock keyboard to revert to normal

If you get email about disabling extened RX, please let me know.

Place a 6 Amp Diode Reverse Biased across the Collector and emitter of the
TIP2955.
This will help protect the Transistor from short circuits and spikes.

Does anyone know if the Q7A uses the same speaker-mike adapter as the Yaesu FT-50? Also does anyone have a mod for full 800MHZ capability?
Any help will be appreciated. Thank you

I fell heir to a old Yaesu 2 meter radio. Had to clean all the rotary switches and the ptt switch to get it to working again but it seems to be doing fine now. I think the radio is about 20 years old. Does anyone know if this was a good radio in its time?

>ham radio will be really dead.

Nobody is proposing no testimg at all. The point is: why should we keep CW mandatory? It should become a choice of operation only, like SSB, AM, RTTY, or SSTV. Legislation, electronics theory, and operating skills should be enough to license a ham operator. If you like CW, you learn it because you want it. Simple. No obligations.

Anyone have a good clean copy of the Kenwood TS 520 (not "S")
service manual? On page 10, there are two Figures that give
levels. My copy, my only copy, is very, very unclear there.
I would be very appreciative to get a clean, readable copy
(even enlarged if it is easy to do!) of page 10. I have many
manuals myself and can return favors :-) .

64. Help! Identify vacuum tube working voltage

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-01 00:00:00 UTC
From: Luke <99310289@mail.wsu.edu>
Message-ID: <01bdbd10$a3bde720$73037986@peng.physics>
Source record: 136376

Hi, I need help to identify the working voltage of a vacuum tube. Since the HAM people maybe one of the last group in the world still using vacuum tube, I hope somebody maybe can help me.

This tube is from an amplifier of my daughter's 20-years-old electric piano that is an antique model. It is mechanical type, not synthetic music keyboard. The power supply (transformer) out of function yesterday. The problem is, there is no any label shows the output voltage like the transformer in the market now. Since the transformer connects to the vacuum tube, if I can identify the wiring of this vacuum tube, then I can find the output of this transformer, that's the basic idea.

The brand of this tube is "Sylvania", model number "6CA4", there are 9 pins, I need to know, at least, what's the voltage that connect to pin 1, 4, 5, and 7?

Any suggestions? Thanks in advance!

Luke

75. WTT: Compaq pentium w/WEFAX for FT726

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-01 00:00:00 UTC
From: N1QVE <harry@connix.com>
Message-ID: <35C2FE5A.BC87482E@connix.com>
Source record: 136387
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

Hi & thx for reading.

I would like to trade a fine Compaq Presario 9546 (100MHz Pentium, 24MB RAM, 1GB HD, CD-ROM, modem/fax, w/ALR FLexview 3x monitor) that also contains a 137MHz WEFAX Receiving System for a Yaesu FT726 VHF/UHF allmode base (or for other VHF+ gear).

The WEFAX system is a complete satelllite downlink station that receives and processes images of the Earth sent by low-orbiting polar satellites in real-time. In addition to the Compaq pentium, the system includes:

a. Quorum WEFAX PC1 demodulator card - fits in card slot of the PC.
b. Latest QFAX software with orbital prediction, receiving, and image processing capability.
c. Allegheny Microwave 137MHz WEFAX receiver with xtals for .500, .620, .850.
------covers NOAA and Russian Meteor sats; expandable to 8 channels.
d. Allegheny Microwave 137MHz preamp, powered via coax.
e. 137MHz turnstile antenna, built after Taggert (included free).

The receiver is outboard to the Quorum board...a stand-alone device. One selects a satellite and the Quorum card automatically captures and stores the images in a
user-definable format and directory. The QFAX software provides different approaches to displaying/printing the images, decodes the temperature data, and provides pixel-resolution temp info selectable by mouse as well as a color-keyed overlay. There is a 3-D option that provides an interesting rendition. There is a geographic overlay from simple long/lat to country/state/shore. Zoom and pan, cropping, etc. The groundtrack of the pass can also be displayed. The package has integrated pass-prediction software that not only predicts and trips the demodulator, but also shows predicted RX ground coverage for a pass -a very useful feature. There is a mast-mount RX preamp powered thru coax.

All offers considered.
73 and thanks
Harry

83. Problem with FT847!!! Birdies

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-01 00:00:00 UTC
From: zhahadum@home.com
Message-ID: <uUFw1.392$ql.11959157@news.rdc1.va.home.com>
Source record: 136395

Has anyone else had this problem? I know I can't be the only one.
One word: BIRDIES! Has anyone heard if Yaesu is going to allow for a warranty relief repair or whatever for this? I counted 45 birdies on 10m alone! It is terrible on HF. At first I didn't realize I had that many. When QST article on this radio came out, I started checking & sure enough-lots of birdies.
How many people have this problem? What to do? I work Ao10 alot & right around 145.901 is a bad birdy. My notch filter takes it out, but what a pain.
Anybody else have this problem? (I thought when I first go the radio a couple months ago that the birdies might have been TV subcarrier harmonics or something-but not so).

You might as well use a '340 in a TO-220 and a TO-3 can pass
transistor like the MJ2955 or 2N4398 for starters. I assume you've
got a resistor between the emitter of the PNP and its base, and
feeding from the base to the input of the regulator.

if you place a second transistor, also a PNP with a second resistor
designed to drop the necessary voltage at the desired current limit to
turn this second transistor on, with its collector connected to the
regulator input, it will then bypass the resistor which biases your
pass transistor ON, feeding the regulator the current from its
collector, the short-circuit or thermal limits in the regulator will
shut it down before you experience any damage.

If you put an SCR triggered from a zener reference at the output such
that it conducts from the input fuse to ground, that will also prevent
the undesired overvoltage. It doesn't need to be too hefty, but it
certainly needs to survive the discharge of the filter cap, on the
regulator-side of which the fuse should be located. There should also
be a resistor between the rectifier and the filter cap to protect your
diode bridge, by the way. Some people use a negative tempco
thermistor, but I would just use a 0.1-ohm resistor or so. At less
than 10 amps you won't need to worry the voltage loss/power
dissipation too much.

I'm sure that if you read the QST article you noticed that while they had the same problem (with multiple test unit samples), they were able to get one fixed (or at least made much better) by sending the unit back to Yaesu for service. I believe the problem had to due with flux contamination on the PLL board.

Send it in for warranty service, they may be able to cure the problem for you. I know you would probably rather not do this, but at least you have a course of action (as opposed to Yaesu's response on the FT-50D 'wideband' receive problem - "Yes, it doesn't work as advertised" and "No, we're not going to fix it for you".)

Bruce,
If you do any soldering while the rig is on be sure to use an ungrounded soldering iron..Its usually not a problem as long as you dont shuffle your feet etc. This will keep you from shorting anything through the 110v ground.
Replacing the battery is not that easy while the unit is powered. If I remember correctly there was some info in QSTs Hints and Kinks column several years ago dealing wth this. You needed to use some diodes to prevent the new battery from discharging into the old one and also to permit the rig to still power the ram.
good luck. I've got a 271 and 471 that will require this operation in a few years.
By the way , if you goof say good bye to the operating system.....

Hi Gerald
I just picked one up from a member of my club for $175 Canadain. It is in very good condition and works very well. It is quite sensitive and almost totally IM free. I have had the radio only 2 weeks and have not gotten a beam for ssb yet. I have only been an amateur for six months so I cannot tell you any more than that. Good luck with the radio.

Yes, that is true....That is the *only* thing bad about having a multiband rig.
If *anything* goes wrong with any band, u r off the air for a bit. I still
really like the radio!

Why is it when people disagree on a subject they resort to name
calling instead of an intelligent resonse. Maybe its because they do
not . Thats whats wrong with the world now, is that everyone wants to
take the easy road and not work for anything.

The Morse code requirement will not be the demise of Amateur Radio,
it is the lazy attitude of the people who do not want to do the hard
work, but want it handed to them on a Silver platter. All they want
is the easy way out. It's this lazy attitude that will put Amateur
radio in it's grave, Not CW.

From: davem@cs.ubc.ca
Message-ID: <6q2bor$1nr$1@columbia.cs.ubc.ca>
Source record: 136207

pat@nospam.com writes:
>What's the better dual band HT between the Icom W32A & Yaesu 50RD?

These really aren't comparable radios. The W32A is a "full dual band" radio that will receive two frequencies simultaneously, or receive on one and transmit on another (in the other band) to provide full duplex operation or act as a cross-band repeater. The Yaesu FT-51 is the comparable Yaesu model.

The FT-50 is a simpler radio than either. It will receive in any of three bands (including 800 MHz) and transmit in either of 2 bands, but only one at a time. You can't receive two frequencies at once, you can't talk full duplex, and it won't act as a repeater. The Icom IC-T7 seems to be the closest match to the FT-50.

These are two different classes of dual band radio (I think of them as "dual receiver" and "single receiver") and you might want to think about which type you want or need. Once you know that, then compare different manufacturer's radios within that class.

Well, a similar thing did happen back in the 50's, Don, when the FCC did away with the Class A, B, C (Conditional) licenses and went to Novice, Tech, General and Advanced.

The Generals were given full phone privileges on all bands, including 75 and 20. Previously, one had to have a Class B license and a year of experience and pass a reasonably searching exam on advanced AM phone to get a Class A and be able to work phone on those bands. But, now it was all handed out on a platter.

I suppose that one could accurately comment that people who had not demonstrated competence in AM phone operation by examination and prior operating experience were suddenly given full privileges on 75 and 20.

Curious, but those bands have never been the same since, have they?

And, even more curiously, those same Generals, et al, screamed bloody murder when in 1968 Incentive Licensing came along and took away some of their CW privileges and some phone bandwidth.

The FCC giveth and the FCC taketh away, and not always as we would like.

I have an old MFJ VHF converter I am looking to get rid of.

This thing plugs on a 2m HT and allows it to receive from 154-164 MHz.
Obviously, with most of the newer radios, this isn't much use anymore,
but I will sell it cheap if some one has an old radio they could use
it on.

Send me email...

IC-706 original, including mic, docs, separation cable and original box. Condition 9.5 out of 10, fully operational. $700 firm shipped CONUS

PK-232MBX, firmware rev 7.0, includes two radio cables, full docs, original box. Condition 9.0 out of 10, fully operational. $100 firm shipped CONUS.

MFJ- 948 Deluxe supertuner, as new, used once then put away, including docs and original box. $90 firm shipped CONUS.

MFJ-1272MYV TNC/Mic switch for Icom/Yaesu to Kam TNC. As new including full docs and original box. $30 shipped CONUS.

MFJ-8621 Packet Tranceiver, bought new for use as a dedicated EMWIN receiver. This was purchased as an experiment. I wanted to re-crystal fo 150.435 and use it to capture EMWIN local feed. As it turned out, the wideband nature of the front end of this rig wasn't selective enough. But it works fine as a packet rig on it's stock freq of 145.01. So rather than fiddle with it any more I'm selling it, and will toss in the EMWIN crystal as well. Unit is in mint condition, working perfectly, with original docs and box, also including the extra crystal for those in a less rf-congested area. $90 shipped CONUS.

Bencher BY-1 paddles, mint, in original box. Bought these and have never used them. $55 shipped CONUS.

Diamond SX-200 SWR Bridge, in as-new condition with original docs and box. Bought an MFJ-259 right after I bought this, and never used it. $80 shipped CONUS.

Terms are postal M.O. payment, I'll supply phone # and references if requested. Shipment will be via Certified Priority Mail.

Thanks and 73,
Ron Ricketts WA5VFA

Now, thats a earfull! Have you ever tried contacting the fcc to get rid of illegal op's? If you have you will know that it doesn't work. If we hear a illegal station, would would you suggest we do? We have had problems on the local repeaters here and have called the fcc until we are purple in the face and little gets done. After about 5 years of bugging them, they finally showed up. They got after one guy that a local had nabbed live and in color sitting in his car. Not a whole lot really happened, and all the worst offenders remain trashing the repeaters. What would you suggest we do about foul language if the fcc refuses to file because of first ammendmant rights? Dead carriers? I outcarrier them... I've found the fcc to be fairly useless as far as enforcement. Not their fault, they don't have the funds /man/woman power. I can think of a real good way to get the goofballs off the radio, but it pretty much entails me beating the crap out of them. Then, I will probably be the one in legal trouble. I can tell by your statements you don't have too much experiance dealing with the fcc. Also no way to self police if we can't make a legal radio citizens arrest. In other words, we can't do it with the present system. MK

I am using hamsticks for the most part. They are very inexpensive and foolproof compared to most screwdriver antennas. I also had to contend with the XYL not wanting anything "ugly" on the cars. I am not bothered in the least by needing to get out to change antennas. I always carry 10, 20, and 40 with me. For those "special occassions" I throw in 6 and 15. They are also used on the boat and on the portable tripod. The 2 in always on the car. I spent less than $100 for the whole set.

Source record: 136230

I too was attracted to ham radio because of cw and have used it almost exclusibely for the past 30 years. However, I also agree that is should be treated as a 'choice' and not be mandatory. If someone wants priviledges in the cw bands, he should pass a cw test. If he has no interest in cw, he should not have to pass a test and he should not be allowed in the cw bands.

From: Jay A <jltmn@ibm.net>
Message-ID: <35c4e418.0@news1.ibm.net>
Source record: 136231

Would someone who has used both rigs care to give a comparion between the 2? I am interested specifically in receive capabilites and not in features nor cosmetics. I mean, yes obviously the dials and buttons on the 847 are smaller than the 920. Obviously it does 2, 6 and 440. The 920 has a built in memory keyer and tuner, etc etc.

Someone please just comment on the receivers, specifically on HF and not on published specs, but rather on real, over the air experience with the two (if you've got that).

Stating "right on" is not very intelligent either.

The point I was making is that the horse is or should be dead. He stated nothing new. He also cannot be bothered to spell check, or is incapable of the same intellectually.

My first intelligent response is take this to the rec.radio.amateur.misc where it belongs.

Second response is that CW cannot be justified in any manner as a logical discriminator for levels of privileges.

The current ARRL proposal is a step in the right direction. Perhaps this step isn't big enough - I'm not sure.

The long worn out premise that battery operated and CW are the only solution is meaningless. First - battery operations have a very limited life. Second - I can operate from a vehicle in a "battery" mode with any and all modes. Why restrict it to CW? Same senseless drivel that has beat each and every group to death.

I too have taken the morse tests. I too have passed them. So what? This has not made me better, nor has it made me wiser. It was simply a required hurdle. I cannot find a single cogent reason to require it of others, save the necessity to achieve higher licensing levels.

Perhaps YOU have something intelligent to offer other than: "Right on. You hit it on the head." This certainly bespeaks of higher intelligence. <Tongue buried VERY deeply in cheek.>

It looks like nobody including the ARRL can agree on a licensing restructure.....Maybe we should have a 5 or 10 year moratorium on issuing Amateur Radio Licenses???? That way the FCC can save some money for congress without screwing up the Ham bands. That will work for me.... d8->

Cheers,

You might check to make sure the 9V battery in the base is good. Also,
there is a gain control on the bottom as well. I use a D-104/T-UG9 with
my 757GX II with no problems. The impedance match is not correct but I
get great audio reports and that is what counts.

Not quite. Particularly between the ages of 6-11, children have the
ability to acquire languages and communications methods at rates
far exceeding those of adults. Making the assertion that a "negative
mindset" is the culprit may be emotionally satisfying if you have a
pro-Morse test agenda to promote, but ignores a lot of physiological mechanisms
behind how people learn.

Its amazing how we always want to lower our standards so that people can join the ranks. Why don't we just do away with things like algebra or english lit. in our schools, that way everyone could get their degree. I mean I have really never had much use for the 3 years of algebra that I took. My current career doesn't make use of it. English lit., well, that speaks for itself. The fact is that people just don't want to work at anything these days. They want it all for the minimum amount of effort. Sure you say the manufactures need more people to feed their market, or people with dyslexia are handicapped, but 20 years ago this wasn't even a big issue. Frankly, excuses are like asshole, everybody has one! We gave an inch with the no code and now they want a mile! I urge everyone to speak up, not only to the ARRL, but to your congressmen and senators. We worked hard for our HF privileges and now we are letting them slip away to anyone who wants them.

We welcome new people to the hobby, it is the only way to keep it alive. We understand the process of learning code can be intimidating but it is not impossible for anyone. Some of you guys wanting to drop the code should be ashamed of yourselves! What kind of example are we setting for or children when we present an example that lowering standards is okay to accommodate slow learners. Being a slow learner doesn't mean someone can't learn it just means it may take 2 weeks instead of 1 to learn the code. Should we do the same for our academic standards in our high schools and universities?

If we loose it then we are all to blame. The OT's that let it slip away, and the newcomers that worked to take it away.

Years ago, I paid $3000 for a 4.7MHz PC with only floppy drives. My friend just paid $1000 for a 200MHz Pentium PC laptop with 2G hard drive and CD ROM drive. Should I be jealous of him? Times change. Why should he pay as much as I did. Your HF privileges are not "slipping away" anymore than my PC above slipped away when my friend bought a better machine for less. Do you feel the same way about people who win the lottery? You don't have any less money even though they got something for almost nothing.

> We welcome new people to the hobby, ...

After they jump through the hazing hoops.

I need help!
My MC-60A Kenwood mic got dropped and doesn't work anymore!

Does anyone know how to open it up so I can see if I broke a solder link?
If not any suggestions on where to send it for repair? I am in Rhode Island.

thanks and 73's
Lee

Message-ID: <1998Aug2.210750@kuhub.cc.ukans.edu>
Source record: 136247

I have a Kenwood dual bander that needs service, and would like to know a reliable service center for their equipment. There have been several threads here on problems folks have had in getting good service on ham equipment. None of the shops that work on commercial Kenwood 2-way want to work on ham equipment.... just not their area of expertise.

Where is the best place for Kenwood amateur service?

135. Transmit problem on Kenwood TS 50S

I have a Kenwood TS 50S HF transceiver that is approximately 4 years old and I have a problem. The radio will receive fine, but whenever I transmit everyone I talk to says that I sound distroted, like I'm off frequency or overmodulated. Does anyone that has this rig know what may be causing this? What about the overall quality and reliability of this rig? I bought the radio used and it is the first Kenwood that I have ever owned. Anyone with any information on how to correct this problem, please e-mail me. Thanks in advance for the help.

138. TS-180S "warble" on rx

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-02 00:00:00 UTC
From: jsusreyn@webtv.net
Message-ID: <4753-35C5236F-68@newsd-112.bryant.webtv.net>
Source record: 136251

I'm trying to fix an old Kenwood TS-180S that seems to have a problem in the vfo or pll circuits. The receiver has a "warble" on all signals it receives. I'm guessing that the local oscillator is being modulated by some kind of internal noise source...

The "warble" is shifting the rx signal by maybe ~100Hz. The period of the "warble" is maybe ~10Hz, but varies somewhat--it is not a constant sine wave. The result sounds kinda like "vibrato" on a guitar amplifier or organ.

Has anyone run into this before? I have the service manual and have been probing around, but don't have an answer yet.

Thanks for any insight,

John Reynolds N7IW

Start by trying a different mic. Also in the menu there's a hi and low
mic setting. That's a good start. If that doesn't solve the problem
you have to get inside. I have a feeling that the change of the mic
will solve your problem. 73 Chris VE3NGW/W4 Florida

Yaesu is a probably low-impedance electret mic input circuit. D104 is a high impedance output mic element, either crystal (original models) or ceramic (much later models). Your problem is very likely simply a poor impedance match.

I have used a transformer to match these, but a preamp would be a much better solution allowing you to manage gain and impedances much more easily. See the ARRL Handbook for suitable preamp circuits.

Another problem is that most mic input circuits these days are for electret mics which require a polarizing voltage. If that is connected to the D104 crystal element it could fracture it or so bias it as to produce little output. Ceramic would probably stand the voltage but output could suffer. In any event a series coupling capacitor is required to isolate the polarizing voltage from the mic element.

Maybe you should be afraid. It's not wise to make anonymous people mad. Many of us who used to be up front with our ID's have had problems. You may get subscriptions to embarrassing magazines coming to your house to which you didn't subscribe. You may get threatening snail mail. You may get email bombed. Or worse. It's hard to fight back against this type of thing so if you read anonymous posts that are reasonable then consider them and give reasonable answers. If not ignore them. Further I think most of us who post here are hams, but of course a license is not required on the net, which probably has a lot to do with why ham radio has come to what it is today.

I'm not sure what software you should have received, since we are using the CAT 300 DX which had none and needed none. Perhaps you're referring to the "Programming under Windows" software, which we don't use. All our programming was done with TT phones, one button at a time!

On the other hand I did try an approach they sort of mentioned, but not really with enthusiasm. (Good reason too, they didn't know enough about it to push it.) They sold me an RS 232 interface, and I provided the modem at the repeater site. The idea being to program the controller remotely from a computer, and of course then you do need their software. I bought the software for the CAT 300 DX, and have it now. But after going thru all this, I found their real intent was to have me take a laptop computer to the repeater site, and download directly thru the RS 232 interface. The idea of using a modem and doing it remotely was sort of an off the wall suggestion they made. It took me hours and hours to finally get it to work, which I did. They really had no interest in helping me either, were so disinterested they offered to give me the money back on the interface and quietly go away. Not a happy parting.

Good luck,

Olin McDaniel, W4PFZ

This may not be a problem at all. My IC-746 behaves the way you
describe, the fan is clearly controlled by a thermistor or something.
The fan's operation in the '746 is definitely related to internal temp -
it does not run just because the PTT line is down.

I don't know if the fan in the '756 works the same, but are you _sure_
that it used to run every time the transmitter was keyed..? If it did,
maybe *that* was the fault condition... :)

> ...the Icom W32A & Yaesu 50RD...

Unfair question. They are both excellent performers! <grin>

I happen to own a Vertex VX-10 and a Yaesu FT-50RD (as well as Icom units). The one thing that is unique to the FT-50.VX-10 is this:

With simply holdint the HT in your left hand, you can change the channel, adjust the volume, key the mike, open the squelch, and turn on the display lamp --- ALL with your thumb!!! It is extremely "ergonomic" and easy to operate in that respect!!!

Things i have heard about it that aren't in its favor: It has a "different" profile (or footprint). yes, it is "short and squatty." For example, The Pouch pouch made for it is the ONLY The Pounh that I have encountered that i wasn't pleased with - because the unit's weight is so, well, concentrated and short.

But it's a solid performer, and a very excellent unit.

Grab a Maha MH-C77a Universal Charger/Conditioner and a Maha FNB-NiMH-47 battery, too, while I'm spending your money for you <g>. The Maha charger will charge about ANY NiCad or NiMH pack you own - for about 1/2 the cost of anyone else's "dedicated" charger! And NiMH cells give you 20-40% larger capacity in the same size pack! For example, the brand new production runs of the maha NiMH FNB-47 (due soon!) will be 2,000mAH - that's a whopping 2 Amps in your hand!!! (SOURCE: A conversation with the President of Maha.)

If you can, get to a dealer and play with these two radios. Both (I believe) are computer-programable. I enjoy the heck our of the ADMS software for the Yaesu.

Let us know what you decide upon!

This trial and error method is the _worst_ possible way to learn about HF propagation. I'm amazed that anyone would suggest that every operator re-invents the operating wheel. Much better to know about, say for example, the dawn terminator _before_ you start experiencing its effects. The same applies to the use of indicies and the related prediction tools which are available and not beyond the average person's understanding.

There are excellent publications which describe the types of HF propagation that can be expected and what to expect from an operating perspective and the strategies for reducing their impact.

I gather from your comments that you believe that you can't learn anything useful about propagation and operating conditions from the books indicates that you have never been a commercial or defence HF operator when reliable contacts are important.

If you take that tack, so has the need for Morse, with the advent of modes like PACTOR. Why do Morse if there is a better mode available?

> There is still a need to recognize greater levels of accomplishment in

> those who felt the need to advance further beyond the beginner novice
> stage. Since most technical advancements in communications today are
> now the result of laboratory engineering, should we require a BSEE, an
> MSEE and a Doctorate as evidence of higher "license conditions"??

Just a guess, but I gather your interests do not lie in the technical area, because of your apparent total focus on appliance operating.

You may be interested to know that there _are_ still significant things being done the home shack by non-degreed people. In a company I worked for, this happened with a very low noise mixer (made by an Amateur) and a high power coaxial matrix switch. Sure the commercialisation was done in the company, but the design and proof of concept was done in their homes in their own time.

Many Amateurs still develop or modify their own equipment.

The thing that amuses me the most is that it appears you can only perceive recognition as being worthwhile in the areas that interest yourself.

Mark.

157. ft-50 mod

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-02 00:00:00 UTC
From: Robert Sorensen <sorensen@student.law.ucla.edu>
Message-ID: <35C4121D.1264@student.law.ucla.edu>
Source record: 136316

Hi all,

I have a specific question about ft-50 mods. I have accomplished the Rx increase through desoldering J1. I have also been mashing around with ADMS-1D software, and have managed to increase the receive hugely. However, I am still missing freqs 824-848 and 869-893. Is this because I have not removed the resistor? The serial number is 7L23XXXX. If so, could someone please describe the resistor hardware mod in detail. I don't mind mashing around with software without much of a clue and learning as I go, but hardware is a different story...

Ciao

Rob

Oh.... What about the ARRL's brilliant idea to just give the Tech Plus & Novice their Class C (General Ticket) without first passing the Tech & General portion written test.... Do you want people who don't have a clue about operating HF with privileges to run 1500 watts on all the HF bands. I would like to know the ARRL director who thought that one up.

Cheers,
Don, W6IQ

Interestingly we have the same argument raging in this country.

At the end of the day it won't be you or me that sees the demise of this hobby repeat hobby, it will be our children's children who will find silent bands with no one to talk to. That's if they're even half interested in this archaic hobby to start with.

Why can't radio amateurs take a look at themselves from the viewpoint of the outside world and address the problem of falling entrants into the hobby repeat hobby. We're seen - in this country at least - as a bunch of mooseheads, preserving old traditions a load Tony Hancocks, nothing else. And it ain't attractive to the outsiders. Sure you might say "I'm alright Jack, I'm doing fine" but that's hardly a constructive statement in keeping the hobby alive. Don't worry about it, guys, when you go upstairs it will still be there, bloody old morse, old timers (like me) prattling away on phones but no young uns, but don't worry about it, you had your good times, don't worry about anyone elses in the future.

If they are going to reduce/eliminate the code, then make it a requirement to build your own rig (not from a kit) I have not upgraded yet (working at it now!) but I resent the fact that the ARRL feels that it is in my interest (as an amateur) to make it "Easier" for me to upgrade. How can you feel like you earned something if you haven't?

Gotta tell you Dads' out there, the Novice Ticket makes a wonderfull father and son/daughter project. Try it. Don't get discouraged because the kids just "soak up" the code like a spong and you have to work at it. Thats just the way it is. Kids have NO problem kicking your behind on code. The theory portion will put you back on equal ground for a while. :o) A short while only though!

Hi Gang,

I have for sale a Yaesu FT-726R 2 meter & 432 all mode transceiver. It has the Satellite board installed, internal power supply, 10 memories, 2 VFO's, original manual, and hand mike. A 6 meter module could be added for tri-band coverage. This would be a great rig for someone that wanted to get started in weak signal or satellites. It works well and it is a 9 on a scale of 1-10 cosmetically. I'm asking $700 and I'll pay the shipping to your location in the continental US upon receipt of a US postal money order. References will be supplied on request. You can call me 515-243-5293 or email is OK. Thanks and 73,

Al

Well Don, tech+'s did 40% of the work required for a general class
license but they were only granted phone privileges on a dead band for years
and years. Just consider this act of grandfathering as an attempt to average
out the unfair treatment they endured for all those years.

Does anyone know the proper modification procedure for the VX-1R to expand the VHF-UHF transmit range and is it true/or not that the cellular can be restored ?????

Currently, there are two different modifications posted on Web sites involving this radio.
One suggests bridging one set of pads and the other suggests jumping two sets of pads.

I would appreciate any information on this modification, especially from someone who
owns this radio and has sucessfully done this modification(s). Thanks very much.

Amateur Radio is a hobby, which is a self-training pool of radio enthusiasts.

"Self-training" not only in electronics, but in self-discipline.

W6RCA's comment of substituting a skill unrelated to electronic knowledge,

indicates that he has a poor understanding of what the hobby is about. Electronic

knowledge, is only one facet of the hobby, operating skills is another.

The "because grandad did it, doesnt mean I have to do it" is only a cop-out for lack of

desire to achieve the nomenclature of "Ham" by working for it.

In the future can anyone tell me what effect an atomic explosion in space with no

atmospheric resistance, would have on all those satellites. Just one satellite went

out recently, and everyone was crying because their beeper wasn't working.

Yes computers can send hi-speed code, but whne the power goes out and you are

relegated to batteries then your CW skills will be utiliosed to the max. if youi have

any! As the Boy Scout motto says: "Be prepared"

Asbestos suit on.

I agree and I remember that the late senator goldwater had two fantastic
base set-ups and pushed for code to remain but when he sat at his radios
he would use modems and computer 90% of the time.
All the code/cw amateurs that want code/cw to be part of testing and
operation need to wake up as do the no code/cw amateurs code needs to go
and proper manners need to be improved, We all need to help the
manufactures to promote amateur radio and get more of the public
interested and involved in amateur radio not to increase sales but to
keep the frequencies we have and to keep amateur radio ALIVE.
Come on now people amateurs/ham's men and women and teens lets get the
band wagon going and keep our hobby/passion alive and well and we need
to police our air-ways and help the fcc to get rid of the abusers the
foul language and dead carriers the trouble makers the one's that give
amateur radio a bad name off the air.

SAVE Amateur Radio promote it work to make it grow, work to make it Live for another hundred years or longer and as for me I have been getting my children hooked on amateur radio and hope the carry it on after Im gone.

You are spared. You don't have to participate in the discussion either. It is YOUR choice, as it is the CHOICE of those whom do NOT wish to upgrade to other classes. Superior is relative, depending on what it is that one is wanting and trying to do. The term superior is not necessarily an all reaching one. It can and does have limits.

> Is it really all that bad to change the license structure and testing

So you agree with dropping the passing grade from 70% to 60%, not applying red ink to an error filled English paper since it will have an effect on the esteem of the writer, and other such demonstrable "dumbing" down of America?

While I support changes to the rules, and see that both code proponents and no-code proponents have equally valid points, to simply pattern the structure after today's society would translate to "go out and buy a rig and enjoy". This is evident in today's society in every facet of life.

As many other ridiculous posts - not worth a real comment. The "dumb" or lazy factor applies especially when the poster either is illiterate or too lazy to even use a spell checker.

What is it you REALLY want to say?

Being prepared can take many different paths. What size is YOUR generator with automatic transfer switch? The mode isn't important if the system is powerless.

Fairnes??? You are going to let people loose on the HF bands who will be allowed to run 1500 watts just to be "FAIR". That's like giving someone who failed his drivers test 10 time a drivers licnese...to be Fair. How can you "Grandfather" some a license that they never had and don't qualify to have. If the Novice & Tech Plus do not have to test for General then "NOBODY" should have to test for anything.... Make eveybod a Class A (Extra).....That's the only "Fair" thing to do... We could then call it the "Citizens Band" or CB....hi hi hi hi hi!

Don, W6IQ

I have an Icom 706 MkI and am trying to connect a headset to the radio. The headset is a Optimus Pro50-Mx, which has a dynamic element. The microphone that came with the radio has a electrete mic. I was wondering how I could interface this different type of mic to the radio. I am guessing that I would need to use a small preamp with the dynamic mic. If anybody has information that could help me, I would appreciate any help.

Thanks in Advance,

Matt C.

What's to boycott?

It's called a market driven product. Buy/read it if you want, else
otherwise not.

Hard to see calling someone who wants to make a buck a "blatant
opportunist".

Hello,
Who was the gentleman from Arizona who purchased the Kenwood TH75A handheld and batteries from me? I inadvertently forgot to pack the instruction manual and the second battery wall charger when I tested the radio prior to shipping it to you. They both turned up yesterday after cleaning the kitchen table (grin). PLEASE contact me so I can forward the items that are rightfully yours -- I need your address. My hard drive crashed and I lost the relevant information.

thanks,
Joe

197. CPU reset Icom 706 MkII

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-03 00:00:00 UTC
From: John Timmers <john_timmers@mindlink.bc.ca>
Message-ID: <35C6653D.55F74C96@mindlink.bc.ca>
Source record: 136007

In the last few days, whenever I power on my IC706MkII, the CPU automatically resets itself, erasing whatever memories, settings, etc. had been saved previously. Annoying to say the least. Is the radio a candidate for the service shop (its still covered by warranty) or is there something that I can do (through some button push sequence during power up) to solve this mystery?

BTW, I have actually done the button-up/button-down while power up button is pushed (as described on pg 15 of the manual for a main CPU reset) thinking that this might do it, but hasn't had any favourable results.

And if it does have to go to service centre, what are experiences of others dealing with Icom in this regard?

I am planning on sailing to south pacific for live-long dx pedition.
I do not plan on comming back. Instead I want to do like Danny Greene
did in the 50's and 60's on his yacht "Yasmi".

Am I correct in thinking that Hams might want to fly out to where I am
and crew on the next let....and of course operate /MM and at the next dx
spot?

Any suggestions as to which spots to 'put on the air ' first.

Ahoy -- Good Ship Menage-A-Troi
Avast ye DX Lubbers, and where might ye be sailing fer??
Skull Island sez ye, shiver me timbers buts thats the home of
K1NG Kï¿½NG and he don't low no Dxpeditions there.
Better plan on Fantasy Isle -- dey got Da Plane Da Plane!!
Or one might furl the scuppers and head for
Tabacco Spit next to Mary Cay

Avoid Grief Reef sez I
A good CW spot might be QueEss Cay
But Avoid Pay Atoll and Bootlegger's Strait, however
But Have a Bon Voyagee Maties sez I.

Me thinks your post is akin to Troll Atoll, Maties

Gary, thanks for answering my questions.

According to Tec-Tec, the Scout is OK with an SWR of up to 2:1.
"Operation at, or near, full power is allowed with an unbalanced
(coax fed) load impedance of 25 to 100 ohms or an SWR up to 2:1."

If I understand this correctly, the radio isn't going into a
VSWR foldback.

I'm running 75 feet of RG-213, so I'll guess that the losses must
be small.

> >If so, does 1/2 an "S" unit on my signal make any useful difference?

Message-ID: <35C6A3C0.7C23@mindlink.bc.ca>
Source record: 136017

Hello fellow W32A owners ...

Just purchased this radio along with the cloning software and found a bug with the software not allowing a pause character into the DTMF entries ... I have generated a patch for this if anyone needs it send me an email bjdobs@mindlink.bc.ca ... also I have drawn out the interface diagram for the RS232 interface.

I have heard that there is a mod for opening the cell block using a cap? does anyone have more details? (The +/-92.1 IF shift works ok just would like all the options)

Also has anyone tried to figure out the interface protocol? Looking for both the cloning and the remote keypad protocols.

When D523 is removed (TX Block) are all bands opened up? (118,300,144,440,600,800)

I was looking at some 3rd party accessories for this radio however I'm concerned that the ptt jack has 3.5 volts on the center of the 2.5 mm jack ... most garden variety remote mikes have only 2 wire plugs (thus the 3.5v would be shorted internally to ground)

So far I'm pleased with this radio ... have had the occasional hicups of attempting to tx on the wrong band/side ...

regards
TerryR

Unfortunatly, that happens to a lot of cruisin' hams..... But
most of them WERE planning on coming back....

>Am I correct in thinking that Hams might want to fly out to where I am
>and crew on the next let....and of course operate /MM and at the next dx
>spot?

I doubt it. But I'm sure you could find some cruzers that want to
go along. Check the inter island net on 14.315 at 0800z daily, I
think you'll find somebody to go along for the ride. When you get to
the DX spot, please don't operate /MM. Put your feet on the beach.
If you operate /MM you'll become famous like Don Miller, not like
Lloyd and Iris.

>Any suggestions as to which spots to 'put on the air ' first.

Yes, I'd recommend P5. I think that would probably be very popular with
everyone you speak to on the radio. Don't forget to enlist a QSL manager
before you go, and take along an Inmarsat terminal so you can email
back the logs. Have a nice trip.

The handbook is certainly a worthy refernce (I have mine on CD-ROM). There are a number of good introductory books and study guides for those starting off. Check out http://marconi.mpce.mq.edu.au/wia/bookshop.html for a list of titles available from the Wireless Institute of Australia (NSW).

Good luck with geting your licence!

Jim,

Are you then saying it is "ethical" for the ARRL to ecourage FCC policy making that would increase their profits and the profits of radio manufactures.... I thought the ARRL was supposed to be for the benefit of Amateur Radio Operators... mainly the "Members" of the ARRL. The majority of who have told the ARRL there should be no changes to the "code" requirements. Not radio manufactures. Sounds like a "conflict" to me?????

220. Protocol specs for HT PC interfaces?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-03 00:00:00 UTC
From: tell@cs.unc.edu
Message-ID: <6q54jjghg1@rukbat.cs.unc.edu>
Source record: 136059

Several of the HT manufacturers are now touting their PC interface capabilities and software, including ICOM, ADI, Alinco, and Yaesu.

Have any of them released specifications on the serial protocol, or has anyone out there reverse-engineered said protocols? Anyone written their own software to replace or suplement that available from the manufacturers?

As a non-microsoft user, I'd like to be able to chose to support manufacturers with an enlightened view of the PC world, and avoid those without. (By that I mean recognizing that some HAMs prefer MacOS, Linux, or somthing else, and are perfectly capable of writing their own software.)

ADI is the only one I've been able to query so far by email, and they say that their protocol is proprietary, with no plans outside of windows and maybe DOS. Guess I won't be buying their's.

I simply don't buy the argument that these policy changes are motivated by economics in the amateur radio market. I don't see the big economic boom. But even if there were an economic side effect, it don't see any harm in it. I can easily see how we all might benefit from it.

>I thought the ARRL was supposed to be for the benefit
>of Amateur Radio Operators... mainly the "Members" of the ARRL.

The ARRL is one of the organizations I belong to, I support them, I believe they are working in support of causes I believe in, and I want to see them thrive and survive. Yet I can find no alterior motives in their actions. I am not perplexed by the actions of either the Board or of the FCC, and I do not need to look for secret conspiracies in order to understand what is going on here.

>The
>majority of who have told the ARRL there should be no changes to the

>to me?????

Your recollection of the poll results is different than mine. I recall no such mandate that "no changes" should be made to the code requirements. I recall nothing that supported continuing the 20 WPM exam. Furthermore I would like to suggest that until evidence to the contrary has been produced, the only connection between the ARRL proposal and the influence of radio manufacturers is idle speculation.

I would like to establish contact with someone familiar with the old SBE line of gear. Specifically the SB-2LA . This is an oldie-but-goodie final amp having six 6JE6 tubes in the final, and runs about 1.2 kw or so from an 880vdc intermal pwr supply. I have a question about a part of the control circuit. I do have the schematic for the unit.

Sorry for jumping in without seeing all of Cecil's post (just too
damn many on these threads to keep up). I think what Cecil must be
saying is that "CW operations" per se are not really tested to
any degree. That is, what do various prosigns mean, how do you
run over the exchange, give a signal report, etc. I don't think
I agree with that, since if you were honestly trying to pass
the current CW test a lot of it wouldn't make sense if you didn't
know some of these things.

Anyway, CommQuart, you may not have looked at the current CW
test judging by your comment above. It is much watered-down from
when you took it, only requiring you answer 7/10 multiple-guess
questions correctly based on what was sent (or 1 minute solid
copy, but guess how often that happens). Though they give you
a blank page to copy onto there is no requirement that you
actually write anything down if you got the 7/10 correct.

That usually translates to 4-5 wpm LESS in operating ability
on the air. Get used to working "generals" at 7.026 going 3 wpm.

HI I just got an EICO 753 and need to know what the tube number is that
sits next to the 5.2xx xtal on the left side of the radio as you face it.
It is a nine pin tube. I am also looking for a manual for the 753 and 751
P.S. If anyone wants to dispose of one please let me know. Thanks Larry

Hi!
Has anyone got a manual for a yaesu FT225RD?
I have just purchased one without a manual and would like to find out
how 2 use it fully.

If anyone can help I dont mind sending a stamped self addressed envelope
if it can be photocopied.

Or E-mailed..

Regards Paul. G1YFC.

The National Electrical Code requires that antenna masts be grounded.

does anyone have
>an idea of the percentage of buds that have grounded mounts?

This is not a matter for referendum.

>
>next, if i do choose to ground, can i use a gas pipe (the line from the
>meter to the house)?. is this safe? is it "code"?

You don't have a choice to not ground. (See first answer above).

To a gas pipe?

If lightning directly strikes the dish, you will have 10,000 or so amperes
of current going through the gas pipe looking for electrical ground.

The pipe will get hot at the pipe joints and maybe blow apart. The
electrical arc would have an excellent shot at catching the escaping gas
on fire.

Think blow torch. Big blow torch. And probable loss of your house.

Morse code "Sending and receiving proficiency" is not a CW
operating test. It is a big step from memorizing Morse code
characters to operating proficiently on the air with CW.

Boy, are you ever way off base. I have proposed that the technical realm be beefed up significantly. I have done the code bit, and I have no problem with it being a requirement, BUT I can find NO logical reason for its use as a discriminator for access to bandwidth or privileges.

As to your ridiculous comment; "you and the no code guys are just a bunch of snobs that are trying to dumb down America", you should be perhaps aware that I resigned as a college faculty member when the administration gave a young lady an A when she protested her final grade. She had earned an 81 and an 88 for mid-term and final. The college allowed the challenge even though it was far beyond the window of time for challenges.

Yep! You are a piece of work. You don't know squat about me or what I stand for. I get the impression that YOU are already "DUMBED" down.

From: boleyd@myself.COM
Message-ID: <35C6272F.CB164354@myself.com>
Source record: 136077

I have a Hustler G6-270 VHF/UHF base antenna. UHF SWR is ok. However, the SWR on 2 meters is 3:1 at 148.00 and drops to 1.5:1 at 145.00.

Any suggestions on how to remedy this??

Most of the above either cost the perpetrator which means they
won't do it, or it is illegal and not very difficult to prosecute which
also means they probably won't do it. If you can't ID yourself in
a free society, it is no longer a free society.

>It's hard to fight back against this type of thing

Nonsense. Please explain which part of the above is hard to
fight back against?

>so if
>you read anonymous posts that are reasonable then consider them and give
>reasonable answers. If not ignore them.

Usually I make it a practice to ignore anonymous posts except to
point out that anonymous posters have as much credibility as
whale dung.

>Further I think most of us who post
>here are hams, but of course a license is not required on the net, which
>probably has a lot to do with why ham radio has come to what it is today.

Say what? What does not having a license on the net have to do with
what ham radio has become? For that matter, what *has* ham radio
become in your anonymous position?

Please, please, please do NOT use the Gas pipe! Definately not "code".
Grounding to the gas pipe is a little like trying to put out a fire with
gasoline, it really doesn't work very well!

If an inferno in what your after, this is the correct method.

Otherwise just drive a ground rod into the earth and connect it to your
dish mount.

242. SWR <= 2:1, Will an antenna tuner do any good ???

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-03 00:00:00 UTC
From: bdiaz@my-dejanews.com
Message-ID: <6q5isn$ml1$1@nnrp1.dejanews.com>
Source record: 136081
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment

I have a Ten-Tec Scout (50 watts output) and a multi-band (10, 15, 20, & 40M) "V" Dipole. After some tuning of my antenna, I've been able to get it as good as I can hope to adjust it.

The 20 meter band is about 2:1 at the edges and 1.7:1 at the "best" part.

The other bands have a lower SWR < 1.5:1 at the best points.

Because of the shorted length, I can't get all of 40 meters with an SWR of < 2:1. Still I expected that and tuned the antenna to cover a bit of the Novice CW and a bit of SSB on 40 meters, so I'm happy with that.

For 20 meters: Will I gain very much if I use an antenna tuner?

I can't recall, is it an SWR of 2:1 means that 1/2 of your power to the antenna is lost as heat? In that case, at the edges of the band my 50 watt output is really a true 25 watt output.

Is this correct?

If so, does 1/2 an "S" unit on my signal make any useful difference?

I believe that with a tuner (set correctly), my rig will run cooler.

Correct?

A cooler running rig should last longer, but will the difference be that much?

Please post any other comments you might have on using or not using a tuner.

>Certainly, it would be a "dumbing down". The fact that you think it is
>"a skill unrelated to electronic knowledge" has nothing to do with it.

True if it was simply a matter of Cecil thinking it. On the other
hand, when he states a truism, whether you agree with him
or not doesn't change the truism. Morse Code has no
measurable correlation to electronic knowledge, contrary to
the whines of Vince and others.

>Amateur Radio is a hobby which has several levels, like many
>organizations you may choose to belong to. Requiring extra effort or
>special skills is a part of life, so why "dumb it down" by giving
>"membership" to everyone equally?

Care to cite the cases where government privileges are
awarded based upon unrelated skills other than amateur
radio licenses?

If you want to have "effort" rewarded, there are already a
plethora of outlets for your tender ego.

>There are some defunct forms of government that believed in the
>"commonality" of all citizens. Don't you get it? America is great
>because its people are challenged to do better, in everything they do.

Do the initials BS mean anything to you? Those other forms of
government tried to enforce commonality. That is entirely
different than allowing commonality or individuality. Our form
of government is based upon individual freedoms and a
central government that exists to protect the rights of the individual.
People are allowed to rise to their level of competence without
the interferement of the government.

>This includes the pursuit of hobbies. Those who stand out should be
>rewarded. I wouldn't want the anonymous "sameness" of members of
>certain organizations who wear hoods, for example.

Well you would perhaps fit in better in that organization than others.
That organization is about imposing their personal views of
individual worth upon others. Sounds like something you want
our government to do.

>I will be responsible for my failures, and expect rewards for my
>successes!!

Sounds good to me, just don't ask the government to be the
one handing out rewards or deciding what your failures are.
That is the responsibility of private enterprise in our system,
not the responsibility of our federal government.

73,
Todd

My question was is it ethical for the ARRL to be involved in a possible conflict of interest. I said nothing of conspiracy.

> I simply don't buy the argument that these policy changes are motivated by
> economics
> I do not need to look for secret conspiracies in order to
> understand what is going on here.

> Your recollection of the poll results is different than mine. I recall no
> such mandate that "no changes" should be made to the code requirements.

Here ya go!

The ARRL Board of Directors met in annual session, January 17 and 18, 1997, at Albuquerque, New Mexico. Here is a summary of the meeting highlights:

Responding to survey results that show that the majority of members favor retention of Morse code for HF operating privileges as an international treaty obligation, the Board decided that the ARRL will not support changing the existing treaty requirement--an issue on the WRC-99 agenda. The Board also accepted other committee recommendations regarding the international rules that govern the amateur and amateur-satellite services.

Ignore the above message folks. This guy Abdul has posted to other numerous newsgroups with trolling crapola like the above. He's probably some twerp with no life who just likes to get the gist of a debate and then posts BS to keep the fire going.

Clean your coke bottle eyeglasses and get a life twerp.

> of snobs that are trying to dumb down America.

Let's see now. First I had to quit laughing hysterically.

Look, I am NOT a no code proponent. I have stated openly for almost eight months that there ought to be a reasonable compromise between the pro code and the no code elements. I have proposed more stringent testing in the written to balance whatever reduction in code requirements there are.

I have NEVER gone along with simply dropping code requirements without a quid pro quo. As to superiority, it isn't hard when folks like you come blasting in without a clue. Ask AA9DX and ccom for copies of what I have sent them off the group. Your premise is wholly unsupported.

In MY book you are another one of the wonders that hasn't a clue, yet wades in in YOUR "superior" manner, yet are totally wrong. I suspect this happens quite frequently in your life. As to the no code support? Ask W6RCA, Cecil. He and I have had heated debates over this issue. I DO NOT give blanket support to the pure no code views.

I have even suggested a "practical" portion of the exam in things like antenna building and tuning. Oh yeah, I'm "really" all for dumbing down. <groan> I detest the current standard of 60% being passing. It used to be 70%. It should go back to it. I used to grade papers in Computer Science with standards of: 2 points off for each spelling or grammatical error. Yes, a student could fail a paper yet be technically 100% correct simply because it was carelessly and poorly written.

Cheers!

Hope you wise up before you walk into a minefield. God help us - another bloody wonder. I wonder how it survives.....

> can you "Grandfather" some a license that they never had and don't
> qualify to have.

Becasuse with the stroke of a pen, they are now qualified. Are you
trying to say a tech+ plus isn't "qualified" to be on HF? Exactly what
kind of magical deeds does one need to perform today in order to get a
General class license that makes them qualified to "talk" on HF.

The "incentive" in incentive licensing is simply moving away from code
and toward written testing. A long time overdue.

Has it escaped your notice that the ARRL proposal *still* requires Morse for HF? The privileges gained for a given Morse speed ability would change, but the requirement for Morse is still there. That's consistent with the January 1997 decision you quoted and the stated survey results that show that members favor "retention of Morse code for HF operating privileges as an international treaty obligation."

Note that the text does *not* say that the survey shows that the membership favors no change to the license structure. And the reason it doesn't say that is because that's not what the survey showed! In fact, over 60% of the members responding to the survey favored granting full HF privileges at a Morse speed of "10-13 wpm" or less. (The full details can be found in the February 1997 QST article starting on page 54.)

You sound like all the other no coders Bob. Always putting down people that
don't believe in what you believe. You find anything wrong with their
posts just to show how superior you are. What you and the others have is a
superiority complex and in my book you and the no code guys are just a bunch
of snobs that are trying to dumb down America.

Hey Ray, why should I be tested on RTTY, AM and the other modes if all I want
to do is talk into a mic and use SSB. Don't care about the other modes so
shouldn't be tested on them. Right!

Gee if I'm not interested in building electronic equipment or operating sat
why should I have to take a test on those subjects? Lets not dumb down
amateur radio by making it so easy that all you need to do is place an x on
the signature line and you will get you call sign with full privileges..

Cecil amateur radio is not all electronics. Part of it is also operating
skill and cw is one of them. Look at it this way, you have an operating part
(CW) and an electronics/rules and regs. Looks like ham radio to me!

If I used your way of thinking then all I would need to do is demonstrate how
to use the PTT on my mic if I wanted to only use voice.

269. TS-820-S Tuning Dial

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-03 00:00:00 UTC
From: Daniel Metzger <dmetzger@monroe.lib.mi.us>
Message-ID: <35C56CB3.415B@monroe.lib.mi.us>
Source record: 136108

I have an old Kenwood TS-820-S that has been giving me good service for two years, but the main tuning dial has developed "rough spots" - kinda like something in there needs libricated or needs the sand washed out of it. Anybody know what to do? I'm a little afraid of opening it up and having springs and gears pop out in six directions.

(Separate e-mail reply appriciated - my schedule makes me miss this group more than I would like.)

From: klimasewski@fccvde.enet.dec.com
Message-ID: <35C5B11E.A436216A@fccvde.enet.dec.com>
Source record: 136109

How do radio's today compare with radios 10 years older? Are the dual conversion
radios like the new FT-847, IC-706, Alinco DX70 or any other dual conversion have
better receivers than older rigs?

Obvious there are more features on the newer radios but I wonder if the receiver/transmitter are any better.

What a bunch of shit Cecil.. Unfair treatment they endured! Maybe I should sue the FCC because when I took the novice I had it for only a year and if I did not upgrade I lost the privileges. It was a traumatic period for me. Wow almost lost it all because of it.

From: W8EK@usa.net
Message-ID: <6q4d2n$t7i$1@nnrp1.dejanews.com>
Source record: 136112

We have the following items available:

TH-41 BT - 440 MHz HT, synthesized, with thumb wheel switches
very small size (shirt pocket size), DIP switch programmable
subaudible tone built in, original box, manual $ 135

stubby rubber duck (about 2 inches long) for TH-41 $ 10

PB-21 H, heavy duty battery pack for TH-21/31/41 series $ 25

DC-21 adapter to use TH-21/31/41 series HT from 12 V DC $ 30

TW-4000 dual band mobile transceiver (2 meters and 440 MHz)
GASFET front end, mobile bracket, original box, manual $ 250

YK-88 C, 250 Hz CW filter for TS-120/TS-130, TS-440, etc. $ 75

LF-30 A, Low Pass Filter, 30 MHz cut off, KW, for xmtr $ 30

The following items are NEW "left over" stock:

BT-6 empty battery tray $ 20

DC-1 DC adapter $ 20

PB-26 NiCad pack for TR-2600 $ 45

MC-43 microphone (8 pin w/ up/down switch) $ 55

SC-8 T case for TH-21/31/41 series $ 15

SC-15 case $ 25

SMC-30 Speaker mic for TH-21/31/41 series, and others $ 35

Heavy Duty power cable for Kenwood / Icom HF radios
(6 pin square plastic connector) $ 20

We also have many manuals (both operators and service), primarily from the
1980's. E-mail your requests.

Prices do not include shipping from North Central Florida.

Hello there :) I'm an electronic musician looking for old SYNTHESIZERS,

KEYBOARDS, drum machines, analog sequencers, vocoders, unusual old

effects and all related electronic musical equipment.

In general, I'm looking for working or non-working instruments made in the

late 60's, 70's and early to mid 80's. Machines with KNOBS, SLIDERS and

especially ~PATCHCABLES~:

The more unusual, the better.

_Moog

_ARP

_Roland

_Buchla

_Serge

_Korg

_EML (electrocomp)

_Polyfusion

_EMS (synthi and vcs-3 putney)

_RSF

_Oberheim

_Sequential

_Steiner Parker

_Aries

_Synton

_E-mu

_Electro-Harmonix

_Ionic

_OSCar monosynth

_Roland _TB-303 Computer-Controlled *Bassline

_Roland _TR-909 Rhythm_Composer

_Roland _TR-808 " "

_Pearl Syncussion SY-1

_ARP _sequencer

_EML-400 _Electrocomp _sequencer

_Korg _SQ-10 _analog _sequencer

_Simmons SDS5, 6, 7 Drum Brains
_Oberheim Xpander
_Sequential Studio 440
_Prophet VS rack

If you have any of the above or similar equipment which you'd like to sell,

or know where i could find some, please email me at rolandman1@aol.com

If you'd like to, please include your phone # since my email has occasionally

been unreliable in the past.

Thank you very much for your time and I apologize in advance if this posting bothers anybody.

I subscribe to "CQ" and most certainly DO NOT support a boycott. However,
I DO wonder about the presence of W5YI on the masthead of a magazine in
which he hawks his wares. (You know, "journalistic integrity" and all that
jazz). Years ago, Peter Norton was a columnist for on of the PC rags whilst
also marketting products. To their credit, the magazine eventually let
Norton go, to pursue his primary bidness. Maybe "CQ" should do likewise.

Just a thought.

Of the multitude of possibilities of operations, why is Morse code singled
out for support from the feds? Looks like bias and prejudice to me.
CW operations are NOT tested. Only rote-memorizing of the Morse code
is tested.

1st, I believe it's time to start limiting your posts to only one per newsgroup. I don't mind seeing it in multiple newsgroups but, only once per newsgroup please!!

2nd, have you tried submitting a counterpoint and had it ignored? Have you tried to send in an advertisement and had it rejected because it conflicted with "Freddy's" advertisement?

Just curious.

If the FCC accepts the ARRL license restructure proposal, copanies that sell HF gear stand too make millions.....maybe billions of dollars off the deal. Many if not most of these companies advertise in QST magazine (owned by the ARRL). The ARRL through QST would stand to make a lot of money. Isn't this a conflict of interest?

A thought,

Abdul,
Give a reason why we should do as you ask.!
Was the article by CQ / W5YI informative?
Was it based on the truth, personal comments aside?
If the answer is yes to both of these, why don't you want
us to read it ?
Are these facts contrary to those given by the
A.R.R.L / Q.S.T. ?
Have the A.R.R.L. debated the subject with it's membership
prior to submitting the plan so it is a result of membership
input ?
What is that thing that Americans say" I may not like what he
has to say but I will defend his right to say it"
As one who is foreign born that sounds pretty good to me.
The alternative of "shooting the messenger" prevents information.
What is it about your heritage Abdul, that finds this aproach offensive?
Have a happy, safe and productive week

Oh NO!! The FCC and the ARRL should be trying to drive them OUT of
business, right Don?

Just wondering why you think this will have such an enormous effect. Are
people prevented from buying these radios now? Is there some kind of law
that says you can't buy an HF rig if you haven't got an amateur radio
license with HF privileges?

The proposed changes will not affect the entry level license class of
Technician, so I wouldn't expect any significant increase in the number of
new licenses. The changes only affect those who already hold amateur
licenses, and those looking to upgrade from Tech+ and above.

>Many if not most of these companies advertise in QST magazine
>(owned by the ARRL). The ARRL through QST would stand to make a lot of
>money. Isn't this a conflict of interest?

I bought all my first rigs used. The guys I bought from were the ones
getting to buy new ones. The financial benefit of the proposed changes,
if any, would seem to apply to more than just the manufacturers and
publishers.

My FT-920 has never given me any problem, including that you mentioned
above. I think that the simplest thing to do to determine the source
of the problem is to disconnect the antenna to see if the "chuggs" go
away.

If it doesn't go away, then it is probably something internal. I'll
probably raise my concern over the unit to Yaesu if it happens.

Good luck and 73!.

i am in the process of installing a 7.5' Winegard dish, purchased used from a tvro hobbyist/installer.

he did not have the antenna grounded (he probably did have lightening arresters at the house entrance).

this brings up a couple of questions. is there any advantage (other than cost/labor savings) that i should be aware of? like maybe the chance of a direct strike is increased by grounding? does anyone have an idea of the percentage of buds that have grounded mounts?

next, if i do choose to ground, can i use a gas pipe (the line from the meter to the house)?. is this safe? is it "code"?

thanks,

loren

320. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-03 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6q337n$b4k@news.Hawaii.Edu>
Source record: 136266
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman (KH2PZ / KH6)

>Evan

Evan:

I can't speak of R7 mods, however, I have operated an R7 and TR7
side-by-side for many years and NEVER turn up the TR7 unless for some
reason I need dual-receive. In my opinion the R7 has it over the TR7
not only in audio, but selectivity, sensitivity, etc. I wish I could
give you suggestions as to the root of the problem but I can tell you
the R7 should at least equal, and probably exceed the TR7.

Incidentally, I use external speakers (non-Drake) for both
receivers...the internal TR7 speaker leaves much to be desired, as
does the matching MS7. I use a small Radio Shack 10W stereo amplifier
and run both audio outputs to the left/right channels. I use a paid of
small bookshelf stereo speakers (used to use a pair of Motorola mobile
speakers which worked well also). The tone and balance controls are
useful for tweaking various conditions, plus balancing dual-receive
mixes.

Hope you can optimize that R7, it's a great receiver!

73,

Dan

Well, I took the General theory test, and 5wpm back in 1976 to get my tech+.

As for grandfathering and will a novice figure out a linear amp (use thereof),
well, those of you who memorized their way to General with Bash(sp) books
and such figured it out.

Neither have the price of technology, lotteries and code requirements.

> I'm not talking about lossing HF privliges and I appologize for wording it to
> give that impression.

What I am speaking about is that small barrier that separates people who have the self discipline enough to jump a hurdle instead of crawling under it. It sets a standard that invites the type of individual who doesn't require much policing. Someone who has worked for a privilege and wants to take care of it. Granted, amateur radio is not void of some huge problems. I hear a lot of racist crap on the low bands, jamming, obscenities etc. but for the most part the amateur bands are in fair shape (I only operate HF, so I can't in include 50+mhz in that statement). I have noticed that most of the rise in the amateur problems have increased over the past 10-15 years. I'm not sure what that means. Maybe someone can come up with an explanation.

If it were up to me, I would do away with any technical knowledge required for a license. In this day of plug and play technology who needs to know how a transistor works or how to plot a smith chart. The written is equally as difficult for me as the code is to some people. Is that next? Will it come to

the point that all one has to do is send in an application for a call sign?

73
Brent Scott, N5CLK

P.S. can anyone tell me why when I look for my old call sign on call sign databases it doesn't come up with a cross reference to my new call?

The FT-50 has a 45.1 Mhz IF on 800, so to rx CMT freqs, just add 90.2 to
the desired freq, and enter the result.
The performance will be only SLIGHTLY worse than if you keyed in the
actual frequency.

Source record: 136285

Hello !!!

Me and my friends bought 4 YEASU VX-1R radios and it's working just fine but scanning is not ok I can't scan 2 band at the same time... Ex. if i stored 2 meters ham bands repeaters to memory and 70 cm repeaters to memory, ican scan bouth bands at the same time ..

Our local YEASU dealer said that i have to change the program inside of that radio with PC.

So if you have taht program could you send it to me via Email.. or tell me where i can load it down... And if have more information about that configure please tell me ....

Best's 73 to you..

> Why do you insist on putting people though an outdated hazing
> ritual. How is ham without morese code unqualified to use HF?
I fail to see how having to learn code is a hazing ritual. It's only 26 letters and ten numbers. And the numbers are in order to make it easier to remember. Having someone stick their tongue on my antenna while I transmitted would be a hazing ritual. A no -code ham lacks the expertise to work a cw contact. Not the end of the world maybe ,but kinda limited. Also may have a little trouble with cw id'ers. MK

Hi gang,

I've just uploaded about 30 pictures of the KWM-2A and accessories I restored some days ago. I have also included some 'hints' and copies of my messages to the Boatanchors and Collins lists, so you can follow the restoration process in detail.

If you want to take a look, please, go to my WEB page (address in my signature) and then click in the "KWM-2A" link.

I would love to hear your opinion if you visit the page.

Hope you enjoy them!.

Best regards and happy holidays.

JOSE

If the rig was ever mobile, and even if it isn't, check the connection at the antenna output for integrity. Otherwise, look for grounds to the station and the presence of RF getting into the mike.

For many people yes, though here in Australia the tests are easier than in the UK (assuming you guys still have 12wpm random character tests). Here you have a choice of 5 or 10 words per minute of plain text. Five is easy with a couple of weeks practice on a PC; 10 takes a bit more work... :-)

I have a Morse program you can connect your key straight into com port 1
or 2 without any hardware. The keyer is provided in the software. This
is free at http://come.to/g0mdo. There are two programs DMORSE sends and
receives, RMORSE is receive only. Help yourself

Did we ever? It was plain text (plus a separate section of random numbers) when I took it in 1970-something.

Doug this unit uses a battery inside to maintain the
memory. I can't remember what type right now, but
if you remove the top cover, you will see it right behind
the front panel.

If anyone else has these units, the flat TX/RX relay
will sometimes will not pull up to let it go into transmit.
A little contact cleaner sprayed into the relay will
usually get her going for another year or so.

Doug if you'll send me your mailing address direct to
dplaff@mtnhome.com
I'll send you a photocopy of the KDK manual.

I agree with your thoughts of not lowering standards be it radio or school. However, you can drop old outdated or non use techniques and put in place something of equal importants to keep the standards up and be more useful. Case in point, as far as higher learning in school: Drop the courses on how to operated a mathematic sliderule and put a course on how to program a computer. Twenty years ago, sliderules were widespread and people needed to know how to use one, because the electronic age hadn't come yet. Now that the computer age is here, sliderules are history. So drop the sliderule and put computer programing in its place, you haven't lowered your standards. You can do the same thing with radio license testing. I view the code testing about the same as learning the sliderule. Interesting but limited to todays world. If someone wants to learn either skill, go for it.

I wish I could have gotten by with only three years of algebra. When I went to college, we started in calculus and it was presumed everyone had a good foundation in algebra. Should we make everyone take calculus just because?

BTW, I am a General class and I learned code, but it was a nine month struggle and I have promptly forgot it. CQ, CQ, CQ.... MY NAME IS, MY QTH IS..... doesn't interest me. Don't miss code either. I am glad that I was exposed to it on the otherhand.

Mark re-read the statement. I was refering to an analogy of what someone
said a person should be tested for if he only wanted to operate certain modes.
Why do you snip only part of what is sent and comment with something stupid?
Just shows that we lack education here in America.
I feel that all HAMs should start out with a "psychological" test. If they
pass that then pass a code proficiency test, a theory test and an operating
test. The psychological test should be given every 5 years upon renewal
of the license. I have been licensed since 1966.

Lets not make it easier for one to get a license. There is enough DUMBING DOWN
here in America. I see it all the time as a Sheriff's Deputy.

369. Help w/ Dentron Jr. Tuner

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-04 00:00:00 UTC
From: s55648@aol.com
Message-ID: <1998080412460500.IAA04748@ladder01.news.aol.com>
Source record: 135915

When I attach coax to my Dentron Jr.Tuner antenna tuner, at the time the coax plug is inserted into the unit, its OK, until the shielding part (the external part) of the plug touches the receptical. Then the Rx goes dead.(no sound). Possibly there is a short, but I have no schematic, and there seems to be no short at the either plug.
Any ideas why the unit would cause the Rx(no receiving) to go dead at this poimnt, and how I might go about fixing it?
tnx
jeff

They still are basic SSB transceivers. They transmit and they receive.
Newer ones have fancy stuff like memories and dual receive but
if you don't care about that stuff then save your money and buy an
older radio.

This unit is clean and works great. Comes with the 25 watt amp, original mic with keypad, tone board, box and manual. I don't have the mobile mounting bracket. Used as fixed station only, so no battle scars from mountain topping. Non-smoker. Asking $400.00 and I'll pay shipping to lower 48. Contact me by e-mail or call 770-972-7248 (nights) 770-640-2476 (days).

Don,

Every ham who would have HF privs under the ARRL proposal already
has HF privs under current rules.

They can buy and use an HF rigs anytime they want.

Hi Robert,

Vibroplex makes a real nice straight key (a new addition to their line), bencher makes a good key as well. These are both somewhat expensive. MFJ makes a good basic key... that is not expensive.

My first straight key (1980) was a Nye Viking Master Key. I still use
it. It is easy to adjust, has the "Navy" style knob, a weighted base
and is very easy to operate. I would recommend it to anyone looking for
a quality straight key.

Just get a J-38 or J-37 for $20 to $30. These keys have been used by thousands of hams for years and years. You see then sell on Ebay all the time. I prefer the J-38 over the J-37 as its key lever can be set for higher tension than the J-37. Others prefer the J-37. The Wm. Nye Speed-X key is another good choice for around $30 to $40 new. The little brass Japanese key Ameco sells for less than $20 is also a good value. It's basically a J-38 style key.

I have the Bencher RJ-1 and the Vibroplex straight key. They are very nice and very good looking but I really don't see where they send that much better than my J-38's. If you are going to spend 4 or 5 hours a day working CW with a hand pump then go for an expensive key, otherwise the old J-38's do the job just fine!

Bob,

The calculations for 2:1 SWR using 75 feet of RG-213 on 20 meters is.

Match line loss 0.59 dB
Additional loss due to SWR 0.11
Total Losses 0.7 dB

As you can see there really isn't anything to worry about. 1/10 dB
can't be heard on the other end.

Likewise, so that's two of us who would welcome any informed comments on this rig. Is it really the case that they're shipping a rig with a general coverage transmitter, as well as receiver? This would seem to be a big advantage, given the prospect of new HF band allocations at the next WARC.

Source record: 135932

Jeff,

If the tuner is not properly "tuned", it may be rejecting the very frequency your receiver is attempting to receive!!

Try tuning the tuner by adjusting the bandswitch or "inductance" control for maximum receive signal. You should notice an increase in receiver noise. Then you can do the same for the other controls before you ever apply any power from the transmitter. A tuner, by its very nature, will tend to act as a bandpass filter and pass only frequencies near its resonant frequency with little attenuation. While frequencies not near the resonant frequency will be rejected, that is, attenuated significantly.

Regards,

Bill

Howdy.
I have an Icom Q7A for sale. It was purchased about 1 month ago at HRO in Sunnyvale. It has the Yaesu earpiece, 4 1400Mah batteries, and the MaHa charger. The total price on all this stuff (and the outrageous CA tax) was ~$250. I'd like $175 for it plus $10 to ship it to you COD.

The radio is mint, has box, manual, warranty card, receipt, etc.

Cheers,

Tom Wiggins

Ward,

I've been using the ATI 201HP. It's a great little radio and has done everything that I have asked of it.

The features make it very easy to use for a newbie, (like myself). It works great for hitting all of the local repeaters, even from a distance.

It seems to hold up well to all the abuse I have subjected it to with not a bit of a complaint.

I have added a mobile antenna and a RF Concepts 30 Watt amp to the truck for some extra punch when I am out in the sticks.

If I had it to do again I would buy the same radio. Great radio, even better price.

Hope this helps,
73's
Dave kc0dox

392. F.S. Yaesu FT-840, FC-10, FP-800 Sale/Trade/Offer.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-04 00:00:00 UTC
From: ab4d@aol.com
Message-ID: <1998080416531100.MAA04086@ladder03.news.aol.com>
Source record: 135938

I have for sale/trade

1. Yaesu FT-840 with both optional Filters and FM Unit, Rig is about three years old probably has about 50 hours of use, includes all documentation, boxes and asscy's.

2. FC-10 Matching Automatic Antenna Tuner is about two years old probably been used 5 times since new.

3. FP-800 Matching Power Supply for the FT-840, this is also about two years old and has about 25 hours of use.

All of the equipment is in mint condition/non-smoker used, and includes all boxes, manuals and asscy's, I no longer use any of this gear and I want it out of the ham shack

What I am looking for is, the asscy's for the 1000mp like the DVS and the FIlters. I also need an Ham IV rotator or a Yaasu 800sdx rotator, Pair of 3-500ZG tubes matched and unused, Kam Plus or Kam 98 Tnc. Yaesu SP-8 speaker, anything offered for trade must be in mint condition.

Cash price is make me an offer because these items will sell to the highest bidder/trade/combination by 8/15/98.

Jim/AB4D

I'll second that. I have used a Nye Viking Master key for about 10
years, and I really like it. Very smooth, easy to adjust, nice heavy
base. I think I paid about $60 for mine.

>arguement went back quite that far

>>
>> Barry,N8PVX

This has been going on a lot longer than that. It dates to
the early 30's when land Morse was widely used by Hams
who were RR telegraph OP's. They used Land Morse
on the Ham bands so they could have their private club
and only the fraternity could copy them. The big fight
was which code could be used. After WWII the FCC
declared that International Morse was the standard.
Some insisted on still using LL Morse even if it
was illegal.
Radios Op's from the military soon populated the
Ham Bands after the War and wanted their club
again. The fight was the Phone op's vs the CW Op's.
Then in the early 50's the FCC threw out most of the
License classes and the General class had all the bands.
This didn't sit well with the "CLUB" and they screamed
and hollered so the Extra class was created with no extra
bands. It took about 10 years for the FCC to give
in to the "CLUB" members and we have the mess we
have now. The only problem now is that the "CLUB"
members are all over 70 or dead.

Seems strange that all the most sophisticated systems
in communications today are operated and maintained by
non-licensed personnel. The Ham bands are the only place
you need a FCC license to operate any equipment.

>a CW contact.

I think it's that way so as to keep those frequencies clear of phone and
data. It may in fact be that way BECAUSE those frequencies are allowed to
them, and the FCC did not want to further balkanize the bands. Those
bands are not used exclusively by Technicians. Someone using CW there
would obviously not be able to successfully tell someone who does not know
code that he is interfering - that's the basic idea anyway.

I just got a fax from Icom this morning telling how to open up the
receiver for scanner freqs.
I have not tried this mod yet myself but it looks fairly simple.

Any questions, you can reply to me at Bert_Herald@juno.com, or email the
Icom technical support staff at icomtech@compuserve.com. They are very
helpful.

Here's all the info I got, re-typed:

Maximum supported Frequency Ranges:

* VHF, 118-135.995 MHz Rx, 136-174 MHz TX & RX
* UHF, 320-399.995 MHz Rx, 400-479 MHz TX & RX
* UHF, 849-869 MHz & 894-950 MHz RX

See prodct literature for frequency limits from factory. Please note,
these are the "tunable" frequencey ranges only. The receivers are
optimized over 20-30 MHz ranges which have been centered around the ham
bands at the factory. Performance outside the ranges defined in the
product specification is not guaranteed.

AM/FM MODE SELECTION (118-135.995 MHz or 320-399.995 MHz Rx only):
* Select an appropriate frequency (left side display only)
* Push and hold the left side MONI(SQL) switch for about ONE second to
toggle AM mode ON or OFF
* The symbol "<" appears to the right of the frequency when AM mode is
enabled

FREQUENCY RANGE MODIFICATIONS:
* Remove Power and Antenna Leads
* Remove the bottom cover of the radio
(see section 16, page 65 of instruction manual)
* Viewing the bottom of the radio, orient the chassis
with the fan to the right (front of radio to the left)
* Locate jumpers W-18, D-139, and D-138

TO ENABLE RECEIVE ON ALL SUPPORTED FREQUENCIES:
* Cut jumper "W-18"

TO ENABLE ONLY SOME RX FREQUENCIES:
* Remove D-134 to enable receive on 300 and 800 MHz frequencies, or
* Remove D-132 to enable receive only for 300 MHz frequencies

>conflict of interest. I said nothing of conspiracy.

It would have to be a secret, since there exists no outward evidence to
support the idea that a conflict of interest exists. It would have to be
a conspiracy if the ARRL is doing something on behalf of a third party.
(conspire: to act in harmony toward a common end.)

I simply don't buy the argument that these policy changes are motivated by
economics and I do not need to look for secret conspiracies in order to
understand what is going on here.

>> Your recollection of the poll results is different than mine. I recall no
>> such mandate that "no changes" should be made to the code requirements.

>Here ya go.

>the Board decided that the ARRL will
>not support changing the existing treaty requirement--an issue on the

Thanks Don. The ARRL addresses only the ITU's regulation in the document
you cite. It definitely does not say that no changes should be made to
our code requirements.

The following items are for sale:

PK-88 Packet TNC, with mailbox option, includes documentation, cables, etc.
$ 75

Hal CT-2200/KB-2100 RTTY/ASCII/CW system, solid state, quality system
copies signals that other units do not $ 475

DGM MVD-1000 interface. Connect to your receiver and a composite video
monitor, and receive baudot, ASCII, and CW signals. $ 125

HAPN Packet adapter - Internal TNC, plugs into 8 bit slot
inside PC - includes lots of software, complete documentation,
cables, etc. Software for BBS also included. $ 80

I found some "patch panels" as used for RTTY, etc. These are the standard
1/4 inch jacks, and are new. Each panel is about 8 inches long. I have some
with 20 positions and some with 40. The 40 position have two 20 position,
one on top of the other. 20 position for $5; 40 position for $10.

Mechanical tape rewinder. This is presently set to rewind
11/16 inch tape, but I think it can be set for 1 inch ASCII
tape, as well. TTY green color. $ 30

Drake TV-300 HPF High Pass filter (for TV set, if you
have TVI) $10

Wattmeters
Tempo RBF-1 A - dual meters for SWR and Power $ 50
Akigawa APM-1 H Peak reading, or average reading $ 100
Micronta SWR bridge and field strength meter $ 18

Prices do not include shipping from Florida.

From: Pat Armstrong <Pat_Armstrong@ccm.ra.intel.com>
Message-ID: <35C76FDB.79B9@ccm.ra.intel.com>
Source record: 135950

I offer for sale a three month old Kachina 505DSP PC controlled XCVR. The radio was purchased in late April and just received the latest firmware/software upgrades from the factory. The radio does not have an automatic antenna turner, however this option can be user added as an upgrade. I am selling the rig due to competing hobbies/interests. Please see the Kachina web site (www.kachina-az.com) for any and all information on this fabulous radio. I am asking $1500.00 (cost $2K) and will ship for that price to lower 48.

Thanks, Pat - AA7FG, Oregon...

MFJ-948 Deluxe supertuner, as new, used once then put away, including docs and original box. $80 shipped CONUS.

MFJ-1026 Signal Enhancing Noise Filter. Used briefly and then I fixed my noise problem so it's surplus. $95 shipped CONUS.

MFJ-1272MYV TNC/Mic switch for Icom/Yaesu to Kam TNC. As new including full docs and original box. $30 shipped CONUS.

MFJ-8621 Packet Tranceiver, bought new for use as a dedicated EMWIN receiver. This was purchased as an experiment. I wanted to re-crystal for 150.435 and use it to capture EMWIN local feed. As it turned out, the wideband nature of the front end of this rig wasn't selective enough. But it works fine as a packet rig on it's stock freq of 145.01. So rather than fiddle with it any more I'm selling it, and will toss in the EMWIN crystal as well. Unit is in mint condition, working perfectly, with original docs and box, also including the extra crystal for those in a less rf-congested area. $90 shipped CONUS.

Bencher BY-1 paddles, mint, in original box. Bought these and have never used them. $50 shipped CONUS.

Diamond SX-200 SWR Bridge, in as-new condition with original docs and box. Bought an MFJ-259 right after I bought this, and never used it. $80 shipped CONUS.

SOLD IC-706 original, including mic, docs, separation cable and original box. Condition 9.5 out of 10, fully operational. $700 firm shipped CONUS

SOLD PK-232MBX, firmware rev 7.0, includes two radio cables, full docs, original box. Condition 9.0 out of 10, fully operational. $100 firm shipped CONUS.

Terms are postal M.O. payment, I'll supply phone # and references if requested. Shipment will be via Certified Priority Mail.

Thanks and 73,
Ron Ricketts WA5VFA

He may be on the masthead, but I suspect he is a contract employee, paid for the column on a fixed page rate. That does not make him a employee of CQ, and his opinions may not represent those of the publisher.

If the magazine is carrying W5YI advertising, I suspect he is paying for the service.

I see no conflict of interest. If you don't like what he says, there is nothing to stop you from expressing your own opinions.

Regards

Pete

It's a 100 (or 110) watt rig.

It can be brought down to the 440 band, but you have to retune the receiver front end. Normally the front end is broadbanded from 450 to 470, and when they say 450, they mean it! It might go down to 449 if you're lucky as shipped from Motorola. I've retuned several to cover 441 to 463, so the same radio can be used for most of the 440 band and the GMRS frequencies. It has to be done carefully to retain it's broadband characteristics. The transmitter will go down to 440 without any modifications needed.

There's no way the radio can be duplexed. It uses the same synthesizer and multiplier string for transmit and receive. But you can buy the radios cheap enough to use two!

As someone else already mentioned, for programming info check:

http://www.geocities.com/SiliconValley/5857/

Paul Bennett has programming software available at a _very_ attractive price that can program these radios. All you need is a (relatively) inexpensive programmer capable of programming 2816 Eproms. Puul's software works very well, and he's good to deal with.

Good Point. If I should ever WANT to send didah's over the air, I can buy a little board for my computer that will blow the socks off the best "fist" around the world. I don't have to build the board or understand boolean algebra to operate it. Ditto on powering up a new Yaesu or Kenwood. Some people in the hobby want some artificial diffuculty to hinder everyone (manual morse code) so they have a false sense of accomplishment. There was a time when it was a major achievement to make a tungstun wire glow for 18 hours in a glass globe. I appreciate what ol' Thomas did for us, but I still just buy my 100 watt light bulbs at the Wal-Mart like everybody else. I don't see the need to RE-INVENT the light bulb (or to regress to 1920's technology for the sake of some old time purists. Do you know we are about to pass the year 2000? Its time to join the time present and stop living in the past. End of subject. KF4WWF NCI # 1831

Absolutely! The DSP, being in the audio stage, will not deal with
adjacent strong signal rejection. The Xtal filter will.

Exactly right! There are those computerists out there that are upset because their world of Assembler and C++ has been invaded by internet browsers that have never written their first line of binary machine code. It probably doesn't upset you much either. Never mind that you have never done a subroutine in Quickbasic language, you just buy your computer at Wal-Mart and plug it in and go. So you cast an evil eye at folks who don't have any interest in manual morse code and act holier and smarter than thou because you like to do didahs. Fact is, I bet you're not interfacing your computer with assembler code.... you just point at the picture and click your mousie just like the rest of us to SEND all that morse code diatribe. I'll bet programming isn't going to be dumbed down because of your activity on the web either. End of subject. KF4WWF NCI # 1831

I had a similar problem with that design. Not all that complicated to
work on but a couple of suggestions.
1. When you remove the dial knob be sure you keep track of the parts
order.
Seems to me there is a washer;spring;washer
2. Then there is a bearing race-I suspect that's your problem. Clean in
a
good alcohol batch and dry out. Cold have bad bearings but I suspect
just plain old dirt.
3. If you must remove the two part dial watch the relative location of
the two dials. It's a tricky job to get everything to line up at the
correct frequency. Also note where the hole to get the screw out is
relative to the outer dial.
Mike
BTW KW redesigned the darn dial..

I agree that mandating CW is outdated. But, I think to keep the airwaves from becoming like internet chat rooms or CB's there needs to be some form of alternate testing for those who do not wish to utilize CW. Maybe a tougher written test or some other testing method for weeding out the bozos.

I would like to get a HF rig and utilize voice, but I have no desire to transmit CW and refuse to learn it . I tried to learn, but couldn't set aside the time it would require me to learn it, plus I have a hard time learning anything I don't like (a problem that goes back to high school).

> And if we ignore the treaty?What's gonna happen?NOTHING!Just like when
>the other countries have ignored it in in past and present....

The US has always had the reputation of being a "class act"
with small-nation delgates to the ITU, and in a setting where
their one vote is as powerful as our one vote, it would be
very bad karma to jeopardize this position/facade, take your
pick.

Then again, taking an exception to the Radio Regs on the record
- a move permotted under ITU procedures - is not exactly
"ignoring the treaty".

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-04 00:00:00 UTC
From: ian coulter <ian.coulter@dsto.defence.gov.au>
Message-ID: <35C6460F.396B3EE7@dsto.defence.gov.au>
Source record: 136027

From Instruction manual:-
1 Select memory mode with [V/M]
2 Set memory channel to be cleared with Dial
Rotate [Dial] while pushing [Func] to select memory channel in 10
channel steps
Call channels (C1,C2) and VFO (VF) cannot be cleared.
3 SElect VFO mode with [V/M] and push [Func] + [V/M] momentarily to
indicate selected memory channels.
Do not hold [Func] + [V/M] for more than 0.5 sec ,otherwise the memory
channel contents will be transferred to VFO.
4 Push [Func] + [Call]for 2 secs to clear the selected memory
channel.
3 beeps sound ,then the frequency is cleared.
5 Push [V/M] to return to VFO mode....

Hope that helps

SOLD IC-706 original, including mic, docs, separation cable and original box. Condition 9.5 out of 10, fully operational. $700 firm shipped CONUS

SOLD PK-232MBX, firmware rev 7.0, includes two radio cables, full docs, original box. Condition 9.0 out of 10, fully operational. $100 firm shipped CONUS.

MFJ- 948 Deluxe supertuner, as new, used once then put away, including docs and original box. $90 shipped CONUS.

MFJ-1272MYV TNC/Mic switch for Icom/Yaesu to Kam TNC. As new including full docs and original box. $25 shipped CONUS.

MFJ-8621 Packet Tranceiver, bought new for use as a dedicated EMWIN receiver. This was purchased as an experiment. I wanted to re-crystal fo 150.435 and use it to capture EMWIN local feed. As it turned out, the wideband nature of the front end of this rig wasn't selective enough. But it works fine as a packet rig on it's stock freq of 145.01. So rather than fiddle with it any more I'm selling it, and will toss in the EMWIN crystal as well. Unit is in mint condition, working perfectly, with original docs and box, also including the extra crystal for those in a less rf-congested area. $90 shipped CONUS.

Bencher BY-1 paddles, mint, in original box. Bought these and have never used them. $50 shipped CONUS.

Diamond SX-200 SWR Bridge, in as-new condition with original docs and box. Bought an MFJ-259 right after I bought this, and never used it. $80 shipped CONUS.

Terms are postal M.O. payment, I'll supply phone # and references if requested. Shipment will be via Certified Priority Mail.

Thanks and 73,
Ron Ricketts WA5VFA

The ARRL has no choice and neither does the FCC. ITU international treaty requires Morse below 30mhz. FCC will pertition the ITU to drop the Morse requirement, but who knows when and if ITU will go along with it.

Is the radio going into VSWR foldback? If it isn't, and it probably
isn't, use of a tuner won't improve your signal.

>I can't recall, is it an SWR of 2:1 means that 1/2 of your power
>to the antenna is lost as heat? In that case, at the edges of the
>band my 50 watt output is really a true 25 watt output.
>
>Is this correct?

No. There is no direct connection between VSWR and system
loss. Indirectly, a VSWR other than unity will cause increased
line loss, but if the transmission line is relatively low loss in the
first place, as it should be on HF, then the additional loss due
to VSWR will also be very minor.

>If so, does 1/2 an "S" unit on my signal make any useful difference?

Yes it can, but it is very unlikely that you're suffering a 3 db system
loss due to the slightly elevated VSWR. You'd have to be using a
long run of very lossy transmission line to see that much extra loss.

>I believe that with a tuner (set correctly), my rig will run cooler.
>
>Correct?

It depends on what load impedance the transmitter is actually seeing.
If the impedance is higher than 50 ohms, the transmitter may be running

cooler. If it is lower than 50 ohms, the transmitter may run slightly hotter. Or not, it depends on the design of the output network.

The purpose of a tuner is to supply the transmitter with a load impedance that it can drive to full output. If your transmitter can produce full output without the tuner, then the tuner is unnecessary. Most of today's solid state "no tune" rigs can produce full output at VSWRs up to 2:1. With values above that, you may need to use a tuner in order for your transmitter to produce full output.

The most important thought being lost in all aspects is that ham radio is a hobby. It does have serious sides (ARES/RACES/ARC, ad nauseum) but it should primarily be fun. I agree with a basic code test, in fact I never argued about the current system. It was a rite of passage.

I also enjoy assembling models, yet I do not have silk screening or painting perfected. For those who enjoy code they are free to embellish and enjoy this aspect. Similarly for packet, TV, etc..

When it ceases to be fun, get out. In the meantime let's accentuate the positive aspects of our hobby and quite debating items which will change. Versatility, after all, is what the majority of you have professed in your notes.

The Yaesu VC-25 VOX headset for the VX-1R works on the IC-Q7. It doesn't have sticky PTT but you dont need an adaptor so its about %30 cheaper than the sam ICOM unit.

Works well.
Cheers
ERIC.

I recently bought a mobile motorola syntor x model # T74VBJ7204BK and I
was wondering if anyone could tell me about it... It came with a
mobile data terminal model # D2706CG ... Can I use that for packet? or
anything else interesting?
How many watts is it?
Can it be used for the 440 ham band?
Can it be full duplex mod-ed for repeater use?
How is it programmed?
Also, does anyone have the color codes for the wiring harness? this one
seems to have been hacked up a bit and I need to reconstruct it.
Also, where the heck do the mic and speaker hook up?
And one more... approxamately how much is this thing worth?

Thanx,

Royce Chow KF6PEO

In article <eh7mOnmv9GA.112@upnetnews03>, Kevin_Ryder@msn.com says...
> And how is this different from the ARRL.

Exactly!I wasn't going to renew my ARRL membership,they aren't(and haven't)been doing ham radio any good since about the early 60's!The CW mentality(sheeesh,it's JUST ANOTHER MODE!),along with the incentive liscense disaster are just a couple of their ideas "to help"ham radio.I was surprised to see in the last QST in the "it happened 10,25,50 years ago in QST section,an article from *50 YEARS AGO*!!about how some hams are feeling CW is a "thing to get out of the way when getting the liscense,and not staying proficient in it".I didn't think the CW arguement went back quite that far,I knew it went back 25 years,because when I was a novice,I was complaing about it then....I had a couple of QSO's,and threw the ticket in a drawer.I never even saw it again,I was so disgusted with CW....

>can void your homeowner's insurance.

i looked before posting in my 1984 NEC guide and could answer this. had not i seen done at more than one construction site, i would not have posed the question. i could have been mis-taken, but i have never seen a black water pipe with the green coating. maybe it was just dirty, not really black pipe at all(?).

>Realize that the antenna structure is grounded anyway by the
>mount pipe, so it is already a target for strikes, but that's probably
>not a sufficient ground to properly handle lightning strike currents,
>and should be augmented.

i am using a non-penetrating roof mount on the ground (that's what came with) so i need to do something. how about a chain-link fence? (i know, just do the job and do it right! ;-).

...>
>Now if you really want some protection for the dish against
>strikes, you'll install a lightning rod near the dish, and higher
>than the dish, to become the preferred local target for lightning

>not just a single ground rod.

i have a power line close by, i am hoping that is providing some protection (20ft poles, about 35 feet away).

>And to protect against induced surge from a nearby strike
>(say to that lightning rod), you need to install a high quality
>gas discharge suppressor in the coax to the LNB.
...>Gary Coffman KE4ZV | You make it |mail to ke4zv@bellsouth.net

i am using surge arrestors now (the ones installed by the cable co) for the little dishes, and plan to install this item for the bud.

"gas discharge", how do i recognize one if i see it? is this the type that i see at building/elec. suppliers and/or Radio Shack?

what should i pay for a "good/hi quality" one?

Gary, thanks for the detailed response. and thanks to all who have responded. i am not really an idiot, but i sometimes do a very good imitation ;-).

Use either an earth ground rod, available at any electrical supply
shop, or a grounding strap to the COLD water pipes if they are metal.
If they aren't metal....you shouldn't have bought the house.
Use 10 gauge or heavier solid copper ground wire..

ABD ishyguy@idirect.com

I recently purchased an Icom 2at (micro) version. this is the unit
between the 2at and the 02at. It has 10 memories, a dip switch has been
added for the ctcss, and the unit should scan.

Unfortunately i didn't get any op manual, so i was wondering if
any new of the f- key combinations on how to make it scan the mems,
and if anyone knows of the dipswitch settings

examp; 107.2 103.3 and how do i activate this, it has a switch on
top, when i put it on it does not stop the squelch.

any input would be appreciated

thanks

477. IC-Z1A wideband mods

Newsgroup: rec.radio.amateur.equipment

Hi there,

Does anyone have any mods for wideband receive for an Icom IC-Z1A?

Cheers,

Glenn VK3YY

I have got a software of MOTOROLA:
GM300 GR300 M120 M10 M130
MC MICRO and M110 for you.

I'm looking for schematic diagram for programming the Motorola GM300, and the cord programming to the micro.

Please help me.

Olivier

Have a dj-s41 440 pocket ht. One of the first ones out. So this recieves 400-499mhz. Transmits 417-481!! Great for the Ham bands and also covers outa band for thr FRS frequencies. It's in great shape, has a few minor light scratches on the window display, barely noticable. Have box and paperwork with a case. Not many of these around that have this full mod so I am asking 80 shipped in the US. Thanks, Scott Hilton,n0oba

Well guys, I *forgot* & realized that I had my pentium *on* on the other side of the room when I ran the test. w/o the computer on, I counted only 5. Sorry. But I do have a couple on 2m USB & here & there.

482. Re: JUSTIFICATION FOR CW

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-05 00:00:00 UTC
From: VKHD16A@prodigy.com
Message-ID: <6qao3t$5h8o$1@newssvr04-int.news.prodigy.com>
Source record: 135814

Lets' face it, the only justification for CW is as a filter. It shows who is dedicated enough to spend the time in a hobby they love to receive extra privilages. I agree with this justification.

The ones who want to lower or eliminate the code requirements: Techs who want General without working at it and Advanced who want Extra without working at it. With the way code tests are currently, with multiple choice questions, you can be 8 to 10 wpm and still pass the 13 wpm test. This will get you up to an Advanced licence and almost all of the spectrum on all of the bands.

Being a ham only for 2 years, I think the tests are too easy. I made Extra in 1.5 years. By the way, the code came to me somewhat difficultly and slowly-- it took 5 months and one fail to pass 5wpm. I made the determination and took the time to learn it and increase speed. Do people think they can learn code without effort? It took me hundreds of hours.

The code tests and written tests are much easier that any other tests I have ever taken: College, post graduate, professional credentials, state tests. Why do we have to make them easier?

I guess I am used to working hard for the things that I value in life, and do not expect to get things for nothing.

Best Regards,
Steve, KQ6TI

I'm vacillating between the AT-600 and the -HP version. Is the
difference between the two radios (2.5 W vs 5 W for the HP) mainly
with the battery pack or are there internal differences as well?

MFJ-948 Deluxe supertuner, as new, used once then put away, including docs and original box. $75 shipped CONUS.

MFJ-1026 Signal Enhancing Noise Filter. Used briefly and then I fixed my noise problem so it's surplus. $90 shipped CONUS.

MFJ-1272MYV TNC/Mic switch for Icom/Yaesu to Kam TNC. As new including full docs and original box. $25 shipped CONUS.

MFJ-8621 Packet Tranceiver, bought new for use as a dedicated EMWIN receiver. This was purchased as an experiment. I wanted to re-crystal for 150.435 and use it to capture EMWIN local feed. As it turned out, the wideband nature of the front end of this rig wasn't selective enough. But it works fine as a packet rig on it's stock freq of 145.01. So rather than fiddle with it any more I'm selling it, and will toss in the EMWIN crystal as well. Unit is in mint condition, working perfectly, with original docs and box, also including the extra crystal for those in a less rf-congested area. $90 shipped CONUS.

Bencher BY-1 paddles, mint, in original box. Bought these and have never used them. $50 shipped CONUS.

Diamond SX-200 SWR Bridge, in as-new condition with original docs and box. Bought an MFJ-259 right after I bought this, and never used it. $75 shipped CONUS.

Terms are postal M.O. payment, I'll supply phone # and references if requested. Shipment will be via Certified Priority Mail.

Thanks and 73,
Ron Ricketts WA5VFA

>

Loren,
I'm a little late to this thread, but thought I'd throw in a
suggestion.
For my surge protection on my BUD, I currently use a Panamax
MaxSat AllPath. Panamax generally has a $5 million lifetime guarantee
on their products and anything connected to them. Tho' I think
some of their surge-protectors cover $25 grand (usually plenty coverage)
I'm pretty confident in their products. I own three different types.
The two non-sat protectors have been replaced/rebuilt for free after
a wicked storm perhaps two years ago; the MaxSat has been trouble-free.
Also, my brother has (had) a RCA mini-dish parked right next to my
BUD and recently lost it to a nearby lightning strike (no surge
protector)
Also, I do have a 8-foot grounding rod buried next to
my dish and connected with 10-gauge wire. I think my brother has
some kind of grounding rod the coax is attached to.

For more info on the MaxSat try:

http://www.panamax.com/products/satellite/maxsat.htm

and for a decent price, try Nelson Hill:

Check the length of speaker wires to make sure they aren't a resonant dipole. Run the speaker wires about two or three turns through a torroid core or get a couple of those ferrite filter blocks that wrap around the wires.

Source record: 135825

I like to avoid this discussion in this newsgroup because it doesn't belong here. But this tripe is too much to ignore.
Your arguments here rank that of a Democrat. NASA choices of modulations methods have another simpler basic element that you ignore: data rates. CW is used to have two human beings communicate voice grade data, not transmitt high speed imaging data. And yes, CW is not a choice for Mb/S. But, to even begin to argue that "CW isn't the mode that always gets through" is an affront to anyone that actually works HF -- all modes --, because it does (and by the by, CW beacons are still not an uncommon all else fails beacon mode for spacecraft).

Your sophmoric discourse is based on complex technical equipment for communication being readily available. If you believe in your own argurments, burn your ham ticket, and learn about wavelength divsion multiplexing on fiber or chaotic signalling over RF for secure high speed comms. What an idiot, the basic of CW is that you don't need a computer or any gear to decode CW, just a human brain about as bright as a chimpanzee. When the power goes out and you hear a distressed boater modulating a foghorn, it still gets through.

I suppose you didn't learn math, calculators are so cheap, don't read cause TV is there, why Ham? dial a random phone number.

A ham ticket should indicate that you are aware of the basic modes of modulation (CW, SSB, AM, RTTY, PACKET, AMTOR, etc)
AND know how to use them. PERIOD. Justifications of why NOT to learn something you don't know are just plain stupid, stupid, stupid, no matter how you dress it up.

so go ahead and flame.

Source record: 135828

1. Yaesu FT-990, AC/DC, with automatic tuner. version 1.3 firmware. 2.0 khz ssb filter, and 500hz CW filter. Hand Mic, and owners manual. I am the original, and only owner, and this radio is in MINT condition. Asking $1300.00 shipped insured lower 48 only.

2. Kantronics Kam with the enhancement board, making it a Kam Plus. It has the 8.0 chip in it, and does all the digital modes including pactor,

and g-tor. I have the manuals, and cables and the boxes. Asking $200.00

3. Kenwood TR-7950 2 meter FM 50 watts output. was used with the kam for

VHF packet.
The radio has 16 memories, and is a 7 on a 10 scale cosmetically. I have

the mic and cord.
I am asking $175.00

These items are used regularly and all work as they are supposed to. As I am updating some the shack, these items are "extra" to my needs.

If interested, reply to my e-mail address.

497. FS: Stolen Standard Twin-Bander C5608 For Sale

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-05 00:00:00 UTC
From: David Hempy <hempy@ket.org.spambites>
Message-ID: <35C90B53.D27D10BB@ket.org.spambites>
Source record: 135829
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

I bought a twin-bander amateur radio (described below) at a police auction in Lexington, Kentucky, USA as recovered, unclaimed stolen property.ï¿½ I have attempted to locate the true owner of this radio for the last six weeks.ï¿½ No one has claimed ownership, so I now offer this radio for sale.ï¿½ The true owner may still claim the radio by identifying the serial number, but as soon as the radio leaves my hands, the serial number will not be adequate to claim ownership.ï¿½ After that point, I will refer the owner to the Lexington Police Department.

I am selling the radio in a Silent Auction.ï¿½ I will accept bids via email for a period of 10 days.ï¿½ A bidder must provide their name, email address, telephone number and the amount of their bid in a private email to hempy(at)ket.org . (If replying to this message, remove the ".spambites" from the reply address)ï¿½

This is a Silent Auction... that is, bids are not revealed to other bidders.ï¿½ The successful bidder will be the only one to learn the result of the auction, and others will never have the opportunity to out-bid the high bidder.

The radio is sold as-is.ï¿½ I have no idea if the radio works... I have never even hooked it up.ï¿½ (I do not have a license)ï¿½ It appears to be in "Good" condition.ï¿½ Frankly, I think the fact that it was stolen is more reassuring (function-wise) than if it turned up at booth in a flea market.ï¿½ There is no antenna.ï¿½ The sale will be final.

My original description of the radio follows below.

The successful buyer may elect to send a money order in which case I will pay all shipping and insurance costs; or the buyer may elect to pay for COD shipping; or may offer another mutually acceptable exchange or agent.ï¿½ I will happily supply numerous personal and professional references upon request.

Looking forward to seeing this radio find a good home,
David Hempy.

ps.ï¿½ Many thanks for the kind words expressed by several of you.ï¿½ Really makes you feel good about the Golden Rule!ï¿½ O(8-)

My original announcement:

I bought the following amateur radio at a police auction in Lexington, Kentucky, USA, and would like to try to locate the true owner:

Standard Twin Bander C5608

VHF FM 144.000-147.995MHz / UHF FM 438.000-449.995 MHz

I'm pretty sure it's a ham radio... Looks approximately like a CB on steroids.ï¿½ It has two antenna inputs (450MHz and 144MHz) and a third, unlabeled antenna on the 144MHz side... a pass-though perhaps? It has oodles of buttons labelled things like, SUB, MS/SCAN, V-M/ENT, CALL/MUTE, etc. The mike has a keypad on it with a lot of the same buttons and a few more, like DTMF and SIFT.

It is a car-mount chassis. It measures 20 x 15 x 5 (cm)... you'd mistake it for a modern car stereo at first glance. According to a ham friend, one antenna is for 440 MHz, one is for two meter, and the other is for a combined dual-band antenna, which he discouraged. Apparently it will repeat signals from one band to the other... useful for roving around your car with your handheld, he said. It is made by Marantz, and he thinks it's one of their better units.

That's about it. I'd like to see it get back to the original owner, and the police department will facilitate the transfer if the true owner claims the property. As no one has claimed since I first advertised its recovery in June 1998, I'd like to sell it to someone who will actually use it.

Please email privately me at <hempy@ket.org> to identify the radio or to make a offer on purchasing it.ï¿½ï¿½

-David Hempy

I tried to find on few years ago, Ampenol quit making them .. Solved it
by replacing the panel part with a Radio Shack 4 pin mic connector.
It fits nicely, is not too hard to rewire .. bonus.. my kenwood mic now works on the
heathkit and the kenwood.

>the house. Any and all comments or suggestions would be welcomed.

The NC60 outputs only a couple hundred mA. That's enough for charging
and to run the receiver, but not to transmit. If you transmit, at the
very least you'll be pulling current from the batteries. The NC60
might also current limit, trip a circuit breaker, or put hum on the
transmitted signal since it will be overloaded during transmit.
Or it might work OK - but you're still discharging the bateries.

However, the story is different using either the car adapter or any
reasonable bench power supply. Either one should supply as much current
as the radio can use during transmit, so the battery is unaffected and
continues charging. And yes, charging takes place in the car - the
FT-50 has an internal constant-current regulator that will try to
charge the battery any time there is sufficient external voltage.
With the highest voltage battery being 9.6 V, 13.8 on the input should
be plenty for charging.

Date: 1998-08-05 00:00:00 UTC
From: Steam <steam@megsinet.net>
Message-ID: <6qcu3pmuk1@news.megsinet.net>
Source record: 135838

I'm selling a Heathkit SB-220 amp. This amp must have had very little use. The
cabinet, face, and meters are in beautiful shape. I bought it from a local ham and used
it for a very short time with my Kenwood ts-440s. I was going to put a soft-key into it, but
never did since I don't use it.
It has full output on all bands and tunes nicely. I also have the original manual. It can
be seen on my web page: http://www.megsinet.com/steam and go to the ham radio
page.
Price is $550. I'd prefer pickup in the Chicago area, or I'll meet halfway up to a reasonable
distance.
I'll ship if I have to, but will need to know how to ship without damaging the unit. It's quite
heavy and the tubes are fragile. Price would then be plus shipping.
If you're interested or have any questions, please e-mail or call me at: 708-795-7739.
Thank you ... Mike, N9IVO

Hello !!!!

I need adms-1 software to configure my radios scanning method...

Now scanning is so stupid, i can't all memory frequenses at the same time...

VX-1R can't listen 2 meters and 70 cm amateur simplex and repeaters channels at the same time ..... What is the Yeasu idea ????

Icom, Alinco, Kenwood and many other radio can do that and it's OK But not Yeasu VX-1R radio !!!!!!!!!!!!!!!!!

please if you have that software pse. could you send that software to me via Email... or tell me how or where i can load it down.

> 449 if you're lucky as shipped from Motorola. I've retuned several to
> cover 441 to 463, so the same radio can be used for most of the 440
> band and the GMRS frequencies. It has to be done carefully to
> retain it's broadband characteristics. The transmitter will go
> down to 440 without any modifications needed.

According to paul's web page, there is a 403-430 MHz version, and it appears to be that because the sticker inside the cover says it's programmed to 413.850 for all channels. The web pabe says the 403-430 version requires surgury on the VCO, and retuning, but I can't find any more info on that... Heck, I don't even know what a VCO is! (I'm new at this) So is this thing worth the trouble, or should I just sell it and buy something that's ready to go?

Also, thanks to all that replied!

Hmmm, well, I must confess, I was thinking about the CW test for an Irish amateur licence (or more correctly, radio experimenter's licence), and I was assuming it was the same as the UK test.

I bet you guys never had to wait over a year for amateur test results (as I had to in 1982-1983, before I got EI6BTB)...

Have you considered purchasing this accessory just as other VX-1R owners
have done? It cannot be downloaded. I'm always amazed that people will spend
hundreds for a particular radio and then expect someone else to give them
software etc.

Doug, it sounds like you may have the KDK-2016, or possibly the -2015.
These came out in 1978-79, and are still pretty useful rigs. If you
take off the top cover, you should see a soldered-in battery that looks
like an AA cell, just behind the LED frequency window. This is actually
a three section NiCd of about 3.6 volts. This is the memory back-up
battery, ans it has probably permanently died by now.

I don't know of a direct replacement. You might try Yost Company (Mr.
NiCd)...I think they have a web site. The replacement needs to be a
NiCd of some sort, since there is a charging circuit built-in to the
radio. A 3 volt Lithium cell could probably be soldered in place and
work OK, but I don't know how long it would last, AND THE CHARGING
CIRCUIT WOULD HAVE TO BE DISABLED for any replacement battery except a
NiCd or NiMH.

I can't at the moment find my manual. If you need more info, get back
to me and may be I'll have located the manual by that time.

BTW, my 2016 is still working after 19 years, with original battery.
Also, the most common malfunction on this radio, which may cause it to
stop receiving or transmitting, is dirty contacts on the large flat
relay on the PC board under the bottom cover. Just pry up the snap-on
plastic relay cover, spray some good quality contact cleaner on the
contacts while clicking the mic PTT button (into a dummy load). You'll
have to do it again someday, but that will restore function now.

I forgot to mention that, if you can find a supplier, what the KDK needs
as a replacement battery are three "one-third AA" size NiCd cells
soldered in series. These cells ARE NOT too hard to find. Try Yost at

http://www.mrnicd-ehyostco.com/

Message-ID: <#tfm2PIw9GA.273@nih2naaa.prod2.compuserve.com>
Source record: 135877

Guys,

I recently received a 2 page letter from KB6ZV (Arrl) explaining to me that CW was old and antiquated. It was giving us (hams) a bad image as geezers in the general public, and it was time to move on. Funny that I have 5 mode positions on my HF and guess which <one> will work when none of the others can get through under the same conditions? CW. Justify the other modes! You can't tell me that testing for the best mode on the rig isn't valid.

IMHO - I use CW on ham radio, you guys who prefer not to use it - stick with your computers and leave ham radio to the hams.

de WB8YQJ/6

Another ham recently wrote:
"I use the telephone for voice. Not much fun but works 99.99% of the time. Ability to reach who I want to talk to is very good. Clarity is good and doesn't cost much. For fun, hobby, enjoyment etc I use CW. "
And that's the whole point. Amateur radio is a HOBBY. OK, some of us get involved in community service with the skills learned. But primarily, it is a hobby, and a hobby has to be fun. What the anti-cw'ers cannot seem to grasp is that, once learned, CW IS FUN!

These things are incredibly sensitive to RF. A couple of sets at work pick up a *FM* broadcast station 1/4 mile away clear as a bell!

Get some Radio Shack "toroid choke cores". The rectangular O-shaped things. They come in packs of two - you'll probably need two packs. Put them on each cable leaving the speakers (including the one to the wall transformer, if you aren't using batteries to power the speakers) as close to the speakers as possible. It might not be a bad idea to put another one at the end that plugs into your sound card, as close to the sound card as possible. Follow the provided instructions - wrap the cables around the cores as many turns as will fit.

It really works pretty well.

Hello,

As a HAM wannabe (and studying for my tests, incluing CW!), I have a question regarding radios stury enough for "field" use. I am think along the lines of the AN/PRC77 tactical radios used by the military. I have heard some things, good and bad, about the SGC 2020 being a good radio for such types of use, but nothing definitive. Can anyone give me any ideas/advice on this?

TIA,
Tim

PACTOR isn't bad, but it won't beat a good CW operator (except in
terms of speed and accuracy). PACTOR II and Clover II can beat
a good CW operator, however. They still work when the signal is
inaudible to the ear by adaptively changing modulation rates and
forms to suit conditions (ordinary PACTOR doesn't).

Now PACTOR II requires a $1000 external box and Clover II requires
a $300 plug in card, so they are a little on the affluent side. But the *free*
Coherent program (BPSK), which will run on even an 18 year old PC-XT
using a very simple interface circuit, can do better than the very best CW
operator in a gaussian noise environment (it still works when the signal
is inaudible by ear too, but is only manually adaptive so it can't make
optimum dynamic use of the channel the way PACTOR II and Clover II
can, and its FEC is rudimentary, so it isn't nearly as robust, but it is
free).

Even in third world countries, PC-XTs are dumpster diving material
today, so cost is not an issue. (Bulk and power consumption might
be an issue, but Coherent will run on a palmtop like the now obsolete
HP95LX too, and that's flea power compared to even a QRP rig.) We
can easily program a system similar to Coherent into a lowly embedded
processor no more expensive or complex than the average keyer, so a
PC isn't an absolute requirement. But PCs are so common it makes
sense to use them in most cases since it avoids the need for specialized
hardware and benefits from the economies of scale, and rapid obsolesence

cycle, of the PC industry, IE yesterday's castoffs are still good enough
to implement what we need to beat the CW operator.

(Note, most amateurs in third world countries are from the elites of
their country, and generally have stations very comparable to those
of people in the first world countries, often better. Those at subsistence
levels simply don't have the leisure time to be radio amateurs, so we
needn't wail that the equipment needed is beyond the means of those
making $200 a year. They aren't amateurs anyway.)

If you just must avoid use of a processor, plain old RTTY, *when sent
at the same speed as CW*, still gives an average 9 db advantage, due
to its use of a uniform code and a fully voiced modulation, when decoded
by an optimum decoder. Even the ancient Hoff decoder made from passive
telco toroids and a simple opamp slicer, is a near optimum decoder. And
a Mod 33 can be geared down to run at typical CW speeds (though why
anyone would use a mechanical monster today is a mystery). The *radio*
equipment can be even simpler than for OOK Morse since the keying circuit
can be less complex to do FSK than to do properly shaped OOK, and the
receiver requirement is identical.

This has been well understood for the 50 years that modern information
theory based on the work of Shannon and Nyquist has been in existence.
Not only has the superiority of uniform codes and fully voiced modulations
been demonstrated in practice, it is also fully understood in theory so cut
and try is unnecessary. Link margins can be calculated exactly.

That's why NASA uses uniform codes and fully voiced modulations instead
of CW for its deep space probes. If CW really worked better, they'd have ranks
of headphone wearing Morse operators copying the signals of deep space probes
such as Voyager or Galileo (machine encoding of OOK Morse is trivial, machine
decoding of OOK Morse isn't). But they don't, because OOK Morse is *not* the
method which gets through when all else fails. Voyager runs less than 5 watts,
and is now over 9 billion miles away. To the headphone wearer, it isn't even there,
but the machine decoders still copy it fine. (Regular monitoring of Voyager has
recently been discontinued so the DSN can spend more time receiving signals
from other probes, but Voyager is still checked from time to time.)

Coherent is being used today on 80m where noise and multipath fading are
often extreme. It handily beats manual CW operators. But it is far from optimum.
We can do still better (and the military does). Multitone FSK, and particularly
spread spectrum, work even better against the noise, interference, and skywave
multipath of HF. (Of course those two techniques are presently illegal for
US amateurs to use on HF if they occupy greater than a 1 kHz channel,
a real pity since they are well proven to be better than any technique amateurs
currently use.) Non-intuitively, the Shannon relation tells us we can receive
weaker signals if we *expand* the bandwidth over which they are transmitted
beyond that required for the baseband information. This is the basis of the
FM enhancement effect, and the coding gain of SS.

Manual CW operators can't even approach the performance levels offered
by those techniques. And thanks to modern VLSI, the equipment to do it can

be very cheap. For example, my DSP based QPSK system (radio transmitter, receiver, *and* coder/decoder) cost less than $125, and I had to buy the parts at quantity one prices. At that price point it is crystal controlled and operates at less than 10 mW, but it can still reliably and routinely maintain a circuit on 30m between here and the other stations using my technique in Indiana and Colorado. Average throughput is only 10 bps (12 WPM), but it never gets tired and it doesn't make mistakes. Much of the time, the signal isn't even audible to the ear, but text continues to print. Even the best CW operator can't do that.

If you still believe that manual OOK Morse gets through when nothing else will, you're at least 50 years behind the SOTA. And if you believe that a *TNC* is the way to do high performance digital, you're also way off the mark. Making the PC act as a dumb terminal to a Z80 makes no sense at all. And don't even mention 300 baud Bell 103 AX25 packet. That has to be the worst system for HF you could possibly choose.

Because of HF skywave multipath, you want to keep your symbol rate below 45 baud (use symbol overloading, IE M-ary coding, to get a greater bps than baud), and you want to use a robust protocol with FEC and low addressing overhead to make the most of available channel capacity. For the most part, this can all be done in software on the PC. Specialized and expensive hardware generally isn't required to do weak signal HF digital, though you can do it that way if you have money to burn.

R268 (on main board) sets the maximum output power (with
front panel RF power control up all the way). R267 on the main
board sets minimum power (with front panel RF power control
turned down all the way). The factory settings are 100 watts
and 10 watts respectively.

And the current ARRL proposal is in full accord with that statement.
The ARRL is not recomending modification of the ITU Morse requirement
(though the RSGB now is). But there is *no* speed requirement in the
ITU's S25.5, so proposals to change *domestic* Morse speed testing
levels is not in contradiction to the statement you quoted.

>meter to the house)?. is this safe? is it "code"?

The NEC *requires* that all antenna structures be grounded.
And the NEC *forbids* connection to gas pipes. Violating either
can void your homeowner's insurance.

Realize that the antenna structure is grounded anyway by the
mount pipe, so it is already a target for strikes, but that's probably
not a sufficient ground to properly handle lightning strike currents,
and should be augmented.

Attachment to a gas pipe, besides being a Code violation, is also
an invitation to a very serious disaster because strike currents
(typically 18,000 amperes) can cause the pipe to rupture at a
resistive joint, and cause a fire or explosion.

Now if you really want some protection for the dish against
strikes, you'll install a lightning rod near the dish, and higher
than the dish, to become the preferred local target for lightning
strikes. You'll want a very good ground for the lightning rod,
not just a single ground rod.

And to protect against induced surge from a nearby strike
(say to that lightning rod), you need to install a high quality
gas discharge suppressor in the coax to the LNB.

551. High Capacity NiCd Charge

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-05 00:00:00 UTC
From: amikam@my-dejanews.com
Message-ID: <6qa9aq$o6e$1@nnrp1.dejanews.com>
Source record: 135897

I have purchased some Panasonic 1100 mAh NiCd cells. I have a simple, slow (trickle) charger that charge any kind of battery for 15 hours before switching to very slow charge. When measured I found 30 mA of current going to the cell for the 15 Hr period (the charger has a red led during this time) and ~ 4 mA after that (Green light on the charger). I assume that the charger has no way to know what is the capacity of the cell that were put in it.

The question : Is it enough to charge the 1100 mAh cells for 15 Hr?

The total current flowing into the cell won't be close to the rated capacity .

Maybe it is better to charge it for 2 complete cycles?

Any advice will be appreciated.

73,

Jimmy

I rarely operate CW anymore, but when I did I was a straight key man. I'd suggest buying a military J-38 or a Speed-X. Either will serve you very nicely, and should be available for around $20 on the used market. It takes an awful lot to wear these keys out, so a 50 year old key will probably serve you as well as a shiny new one.

For sale: That hard-to-find power plug for Yaesu VX-1R radios.

Price, including first class postage to 50 states or Canada:
1 connector for $3.00
2 connectors for $5.00
3 connectors for $6.50
(add $1.50 for each additional connector)

We also have 7806 regulators for an additional $0.50 each when
you get one or more connectors.

Add wire and a couple bypass caps and you can have a 12-volt
adapter for under 5 bucks. Compare that to the $38+ that Yaesu
wants for their's. (At the Rochester hamfest it was "only" $35.00.)

Send a note saying how many you want along with a check or M.O.

>>but limited to todays world. If someone wants to learn either skill,
>>go for it.

I say limited basically because most CW people send and receive at a slow speed 5, 13, 20WPM or maybe more?) Yes there is a small percentage of people that can copy at 25+ WPM. CW is like speaking a foreign language and takes lots of practice but usually much slower than voice. Yes its fun for some and yes there are people that get very good at it. If a person likes the challenge, go for it, just like learing a second or third language. In my example, sliderules can get the job done, but they are slow compaired to todays computers and calculators. Should sliderules classes be mandatory? Or should they be phased out (which they are) and the high standards of whatever licensing program be maintained by introducing the study of new technology fitting to the subject? CW should not necesarrily be foregotton but less importantance should be placed on mastering it. A 5WPM test should suffice for all classes of license would be my recommendation.

I bet you more people are communicating by the new electronic internet than by CW. Face-to-face communication, followed by telephone and then followed by internet would be my first guess at the most used forms of communication. I don't belief CW would make the top 10 list.

>Sounds like they're referring more to a QST than to a CQ. CQ is a call to
>any station, QST is a call to all stations.

Hi Jim - QST is one of the few Q-signals which is amateur-specific -
you won't find it listed in any ITU pub. It literally means "Calling
all amateurs and ARRL members."

CQ is the general call to any *or* all stations; you'll hear it used
both ways, e.g.:
"CQ CQ CQ DE 3LKM 3LKM - ANI ONE HV SOUTH PAC WX BTWN 140E AND 180?"
and
"CQ CQ CQ DE XSU XSU XSU TFC LIST QSW 448 KHZ UP"

CQ is the lowest precedence general call, the others being
TTT, XXX, DDD SOS, and SOS.

I'm looking at the CTCSS tone encoder and decoder board for the (now out of business) Advanced Computer Controls (ACC) model RC-96 repeater controller.

We may need to expand our CTCSS decoding capability. MX-COM, the manufacturer of the IC, no longer shows this model in their (1993) catalog nor their web page.

Does anyone know of a supply or direct, plug in replacement for these?

Thanks in advance.

John...

Brand New Portable Antenna Analyzers for sale.

Active VSWR meter giving direct readings of both VSWR and % reflected RF power.
It is designed to check the exact resonent freq. of any antenna, HF, VHF & UHF.
It has a 4 digit freq. counter and an analogue meter, with a switch for 2 freq.
ranges and 2 knobs for freq. adjustments, Fine & Coarse.
It has major advantages over a standard VSWR meter in that it sees the antenna
system exactly as the Transmitter sees it, plus the frequency is swept to see
where its resonating. Makes trimming so much quicker and easier !

For further info E-mail RTE
at rte@iafrica.com
or call (011) 882-9182 or 882-0762
or Fax 882-9182
Johannesburg.

RTE also buys, supplies, rents and repairs Comms. Monitors plus all sorts of RF
Test Equipment.

First of all, thanks to all who responded to my request for help with my MC-60 microphone. It turned out all right!

Have a new problem. Just purchased a TS-450s/at. It works fine but is not putting out full wattage/power. Had a friend double check on his meter and it is averaging about 25w on SSB.

He thinks that perhaps the radio was "turned down" by a previous owner who is known to have used a linear with it.
The question is: How do I turn it back up???
Is there a pot somewhere that can be returned to it's original state? And if so, where the heck would it be???

Thanks in advance for any help.

Hello Jeff,

You wrote, in part: <<<< I know the manual says not to transmit on the FT50 while charging using the NC60B charger >>>

My guess is that the charger will induce AC hum onto your transmitted signal. However, if you powered it from a DC supply with the appropriate current capacity, there shouldn't be a problem.

Bill

579. RE: - JUSTIFICATION FOR CW

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-06 00:00:00 UTC
From: guygordon@juno.COM
Message-ID: <19980805.212922.3174.0.guygordon@juno.com>
Source record: 135711

Dear WB8YQJ/6

CW is fun and simply another mode. Oh well . . . we all have our favorite modes of operation. Most "computer people" don't know much about RF and most "RF people" don't know much about computers, and never the twain will meet.

It's rather funny, because I've been in Ham radio since 1964, when SSB was frowned on, and the OT's didn't like sounding like Donald Duck. I tired of Ham radio in the early seventies, because it was so limited. Times change, but attitudes in ham radio and history repeat themselves. Now, I'm an OT, but with an exception of promoting new technology. I learnt from the mistakes our backward Ham predecessors.

YQJ/6, for your information CW is good, but will NOT always work, when other modes cannot. i.e. CW is NOT a "fall-back" mode. It's only ANOTHER mode.

A Creative Sound Labs DSP card together with the appropriate application software will "get through" on Pactor or RTTY, when CW will not. With RiTTY software one can "work them" and not "hear or see them." On CW if you don't hear them, you can't work them.

I rue the day, but where must we draw the line on technology and growth? I guess, the original Americans communicated with smoke and drum signals--a form of CW. How far back in time and technology must we regress?

73 - Guy
KO6UJ

WB8YQJ/6 wrote:

I recently received a 2 page letter from KB6ZV (Arrl) explaining to me that CW was old and antiquated. It was giving us (hams) a bad image as geezers in the general public, and it was time to move on. Funny that I have 5 mode positions on my HF and guess which <one> will work when none of the others can get through under the same conditions? CW. Justify the other modes! You can't tell me that testing for the best mode on the rig isn't valid.

IMHO - I use CW on ham radio, you guys who prefer not to use it - stick with your computers and leave ham radio to the hams.

C.W. is a very intricate part of the amateur radio experience. I passed the 20 wpm "multiple choice" test and achieved my extra within 8 months of obtaining my Tech No-Code License. It really is not that difficult and I appreciate the tougher standards
that the people in pass decades have had to deal with but I must say the reduction of standards has got to stop here. I am under eighteen years of age and I think it is enjoyable and I know several of my friends, who have there 20 wpm enjoyed it. With every passing day I become more proficient in the art of c.w. And think as long as you keep practicing nothing is going to stop you. Now do you really think that we should keep lowering the standards or should we say it stops here because either way amateur radio will keep going, but are willing to jeopardize it by letting hoards of licensees onto H.F.? Hell I say if you want it work for it not petition the government to let the standards down. Now hopefully this will not provoke too many people, but I have been reading these statements for the past couple of months and I have to get my 2 cents in. That's what I think.

Sincerely,
Martin, N3ZNF

Have about 50 used 6 and 7AH 12 VDC gel cells for sale. All load tested good. PERFECT for QRP rigs
and portable operation. I have sold hundreds of these to the QRP boy's on the QRP mailing list and all have been very satisfied. Had a few damaged in shipping and one came back DOA which I replaced for the fellow free of charge but that's it. I am the service manager for an alarm company and we change our customers batteries every 3 years as preventive maintenance. These used cells should provide another 2 to 3 and probably longer service if used and recharged properly. Cells come fully charged and are ready to go. They can be recharged with a simple wall wart charger available at Radio Shack or a 1 amp automotive charger. I guarantee against DOA.
Brands are Yuasa, Interstate, Radionics and Portalac.

4 ah cells are $8 shipped CONUS (SOLD OUT)
6ah cells are $10 shipped CONUS
7ah cells are $12 shipped CONUS

Images of the cells can be seen at:

I agree there should be a filter to weed out the non-dedicated from the hobby. No argument from me about that. I don't necessarily want the hobby watered down and become like CB. I just wish they would pick a more meaningful way than code. I view CW, Navajo code talking, or C++ computer language all about the same, interesting, some usefulness but I sure don't find any of them fun and can live without any of them. There has to be another aspect of Ham Radio to be studied/tested upon, that is current, where most Hams need to know the basics of and most likely will use after getting licensed. Detailed antenna construction questions of various desgns could be a likely topic to replace CW for testing purposes.

What would you say if FCC decided that if you wanted to renew your license, that you had to send and copy Navajo at XXX WPM? Remember, the Navajos played an important part in WWII, some 45+ years ago, just like CW has done in the past. Hmmmmm.

BTW, I have already jumped through the 13WPM hurdle so don't flame me for not trying and I still don't think its fun. If its fun for you, then great. Hmmmm, how many minutes would it have taken me to send this by CW? Oh foreget it! If I had of, I sure couldn't review my transmitted thoughts and changed it in any way before sending. How long would it take to receive this message (by CW) and all the other posting on this newsgroup? You would be bogged down by the lack of transmitting-receiving speed and would miss losts of information (some awesome information, and lots of bad) .

My opinion,

Ross

Alan,

Nice to know somebody remembers Cromemco. Microcomputers have advanced and matured fast in the last thirty years so that a "sci.antique.microcomputers" dealing in everything about "antique" microcomputers should be a good outgrowth out of interest in electronics.

>If you have an old Cromemco Z-1 or Z-2 or something close to it and
>you are interested in digging it out of the corner, let me know. I'd
>like to buy one or the other and we could work out an incentive for
>you to go dig it out out.

The Z-1, Z-2 looks and weighs in like a 'boatanchor'. You must be into collecting. Good luck. I saw once a complete set of the series in one of those fund raising used-stuff stores for something like twenty bucks. Discouraging prices reflecting the demand for the stuff but it disappeared overnight. I didn't need it, I still had my own still sitting in the computer room much like an old vacuum tube set. Takes up too much space anyway to get another one, even for collecting. One day, I'll fire mine up again just for the 'll of it to stare at the cursor. :). The thing was like the Collins in its heyday. It cost a lot more though. And the software choices were very limited. Cromemco disappeared as part of another company. The S-100 bus design microcomputers were overcome by IBM, shrinking demand, and plain economics.

The only difference is the battery pack. The HP has the 5W pack and the
non-HP has the 2.5W pack. If you get a cigarette lighter plug you will get 5W
no matter which pack you are using. I'm not sure if there is a AC to DC plug
that will give you 5W if you want to use it as a base rig. I'm looking into
that.

I might just subscribe today.
I do however welcome counter points of view.

The point that is now being forced upon the ARRL via the FCC is that the ARRL was not sharing the same view concerning Morse Code as the majority of the Hams licensed. Judging by your tone, you may be part of this minority.

I believe Gary did a marvelous job of logically explaining where we are in Amateur Radio and how we got here. You may want to use DejaNews to look some of this material up.

Bob, as I remember the 577 was a general purpose curve tracer designed for the educational market. It was available with 2 display options and 2 fixture porches. The display options were: Storage (D1) and Non storage (D2) the porches were 177 Standard devices and 178 op amps. Collector range was 6.5V @10 A to 1600V@.04A. You could check most devices for operating characteristics as well as breakdown or leakage. It was replaced by the 571 in most educational areas for general usage. Hope this helps.. Roger rwill219@aol.com or Roger@blii.com.

Nor do I. I do, however, expect some facsimile of logic to underlie competency tests. Make the written tests harder - fine. But bag the morse.

I agree with Casey. What's wrong with a little challenge now and then to prove to yourself that you can and to the fraternity that you really want it.

As for justification for CW, I think there will always be a need for it. Imagine for a moment a worldwide catastrophy of some sort and you were able to survive, but your gear didn't. You have nothing but junk and parts left and you have to rebuild something to communicate. A sophisticated ssb unit is out of the question, but a simple oscillator is not. Hmmm, maybe CW isn't such a bad idea after all. John

Also apparently used in the HW-101 and HW-202 and perhaps more. I suspect that you don't want the Heathkit numbers so, not to keep you in suspense, in a 2-3 year old Allied catalog, the connectors are now made by Wire Pro, Inc. instead of Amphenol:

Allied # Mfr.'s # Description
cost
719-3105 80-MC2M Male Plug $6.92
719-3110 80-PC2F Female Receptacle $5.16

Allied's Service # 1-800-433-5700 or htttp://www.allied.avnet.com

As I stated, this data is a bit old, so check for more current info. Of course, you might want to just go and switch the connectors to something more convenient, especially considering that the returns for the microphone and PTT are soldered to the spring strain relief, which then is mechanically connected to the microphone shell, to make the third terminal in the circuit.

There isn't an AC adapter for the radio per se. Wall cubes generally aren't filtered or regulated enough to use them with an HT. However, the radio will run off of any good 12 or 13.8 volt power supply that supplies at least 2 amps. There are many power supply manufacturers (such as Astron) that have inexpensive supplies that will perform well in this application. Give your local ham radio store a call or visit your local Radio Shack.

If you were able to comprehend what was written, you'd realize that Voyager
is currently operating at 10 bps, that's roughly equivalent to 12 WPM for the
technically illiterate. Now try using 12 WPM OOK Morse over a 9 billion mile
path while only running 5 watts. Or simply scale matters to an equivalent
SNR on a terrestial HF path and attempt it via OOK Morse. You'll fail miserably.
But my little QPSK rigs do it every day on 30m at an equivalent SNR, and the
fellows running Coherent on 80m are doing almost as well, with their signals
generally inaudible to the ear but still printing out text.

>Your sophmoric discourse is based on complex technical equipment for
>communication being readily available. If you believe in your own

>or any gear to decode CW, just a human brain about as bright as a
>chimpanzee. When the power goes out and you hear a distressed boater
>modulating a foghorn, it still gets through.

Actually, my discourse is based on a graduate level understanding of
information theory as applied to weak signal RF, and on a real world
hands-on practical experience with the techniques which I discussed.
The equipment needed is technically complex, but that complexity is
largely embedded in very cheap commodity VLSI which renders its
complexity moot from an applications engineering standpoint. And
it is certainly widely available, even in the most mundane of consumer
appliances. I have no intention of burning my amateur ticket, but I would
like to encourage amateurs to rise above the chimpanzee level in their
knowledge of RF communications techniques. What boaters may do
with foghorns, or indian scouts do with smoke signals, is not my concern.

>I suppose you didn't learn math, calculators are so cheap, don't read cause
>TV is there, why Ham? dial a random phone number.

Oddly enough, no engineering school requires proficiency in OOK Morse
in order to grant a degree in communications engineering. They do expect
you to understand math, information theory, and signal design. Perhaps
that's because the latter subjects have some relevance while OOK Morse
is just an archaic and inefficient modulation and coding technique now
largely abandoned by all but the most backward of practioners. Med schools
no longer require their students to be barbers skilled in the application of
leeches either. Fancy that.

But lest you think I speak only from a theoretical perspective, I would
remind you that I have 35 years of amateur radio experience, including
a stint as NCS of a statewide traffic net. OOK Morse is not something
of which I only have a theoretical understanding. I've used it in the trenches
too, and found it sorely lacking as a text transmission method. I gladly put
it aside when better techniques became available, as has nearly all of the
rest of the communications world. There's a lesson there for all but those
too blind to see.

You may cling to OOK Morse in the manner in which members of the Society
for Creative Anachronism cling to jousting matches, IE for idle amusement,
but don't be fooled into thinking it is a superior technique. It has as little
chance of beating a modern signaling technique as a knight on horseback
has of standing up to a M1A2 tank. (Even 50 years ago there was no chance
of that, ask the Polish cavalry.) Do try to realize that this is 1998, not 1898.
There has been a bit of progress since the days of spark.

609. FS Kenwood TS450S w/ tuner

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-06 00:00:00 UTC
From: bens@valint.net
Message-ID: <01bdc0e3$516f4dc0$14b86bce@default>
Source record: 135741

I have a TS450S without tuner. It is near perfect cosmetically, and perfect electrically. It has MC43 hand mike, and manuals, as well as original box.

I am asking $575 but would entertain offers.

Bob, KQ7J

From: cgibbs@freenet.columbus.oh.us
Message-ID: <6qcmql$3f3@login.freenet.columbus.oh.us>
Source record: 135742

now that the prices are similar, which of these two reasonably priced
single band HT's would you more experienced users recommend

i know there are better radios and those that do more, but i'm trying to
limit my inquiry to somewhat similar (and relatively inexpensive) equip.

thanks!

Nat, do realize that it is not the government's place to mandate fun.
And I expect you'll be surprised at the number of us who *do* know
Morse who do not consider it fun. If you find it fun, do continue to use it,
but don't demand that the government keep it on artificial life support.
That sort of welfare mentality has no place in regulating access
to public spectrum.

The burden of recruitment should fall on you and your fellow travelers
rather than by invoking government force. If CW is as much fun as you
say, you should have no trouble generating enough recruits to keep its
practice alive. One would assume that its use in Dx gaming activities
would be sufficient motivation for many. I'll take your word for it that
some people do consider it fun, but please take my word for it that
others merely consider it a crude text transmission tool that they
gladly lay aside in favor of better methods.

The idea that all tuners will behave as a bandpass filter isn't true.
Two common designs, the T network and the Pi network, act as highpass
and lowpass filters respectively. I'd make sure I wasn't committing
an operator error by having the antenna select switch in the wrong
position as a first cut. Running through the settings can follow as
another quick check. If it is still dead, it is time to open it up and
trace out the wiring. Tuners are pretty simple beasts, you don't
really need a schematic.

A T network is basically this:

```
-----||-----x----||----
|
)
)
|
---
///
```

And a Pi network is basically this:

```
-----x-----)))))))-----x-----
| |
= =
| |
--- ---
/// ///
```

Well, none of the mobile/portable amateur HF rigs are touted as Milspec,
but most of them can take a fair beating and still keep on ticking. The major
thing you need to protect is the display and controls. You can fabricate a
front cover, sort of like a scope cover, to do that for most of the rigs. Several
of the rigs allow the front panel to be removed. You can then carry it in a
separate padded pouch.

My impression, admittedly very brief, of the SGC 2020 is that the case
is a little tinny compared to some of the others, so I might worry a bit more
about it getting banged around than I would an IC706 or DX70.

The only mod I can offer is one that will greatly enhance the reliability
of the radio. Replace *all* of the solder plated Molex pins with gold
flashed pins. Those solder plated pins *will* give you intermittants
sooner or later, so replacing them with the gold flashed pins now is
a good way to avoid that headache. I speak from experience.

What kind of antennas ? Beams for weak signal work, FM verticals ?
What are your needs ?

Some of the editions of the ARRL handbook have the design of the K1FO type
(probably one of the beter weak signal type) plus lots of other good
information about ham radio in general. If all you want is the antennas, they
have a good antenna book.

Turn radio over with front panel facing you. Remove complete bottom cover. Locate VR-15 near right hand corner of board. Using 13.8 volts, power and carrier knobs fully clockwise, adjust for 100w into 50 ohm dummy load on 14.100 (every legal station has a dummy load). Don't adjust anything else as alc will get out of whack.

I got this info from another Ham when I had to turn mine down!

>

While your argument makes sense on the surface, I wager the dropping of (more stringent) CW testing will not be accompanied by an increase in standards elsewhere in the test. I site the history of the testing program here as a clear example of how standards slowly, but surely drop.

It has been my experience that many opposed to the CW requirement simply don't want to spend the extra effort, regardless of the subject. They will be no more accepting of an increased technical requirement than they are the CW requirement. After all, why would most Hams need to know about resistors, transistors, tubes (gasp!), etc. when all they do is go down to RS and buy an HT. Why should they have to learn all that irrelevant stuff? They aren't building radios. All they need to know are operating protocols and a little bit on safe operation.

Give in on the CW requirement and the rest will surely fall. Do you believe the bands will be better after this? I don't. 5 wpm CW is not that hard, really. If, for whatever reason, 5 wpm is unreachable, there's still the Tech license. What with repeaters, packet and satellites, there's more than enough modern research work to do and fun to have on 50MHz and up. Why would anyone doing, for example, spread spectrum work want to be on the 80M band?

If they do succumb to the clamor, I hope they leave a little bandwidth on HF reserved for CW. It needs so little, given it's efficient use of spectrum.

Just my $0.02 worth.

NIST (formerly, National Bureau of Standards) has a bunch of reference antenna designs.
Not exactly sure how you get your hands on them, but it's public record.

Bob:
Regarding making the written tests harder: they can't under the current method of publishing the questions and answers. It took me several months to learn the material and pass the Advanced test. I know someone who looked at an answer book for 1.5 days and passed the test-- my 15 year old son, who can virtually memorize everything he reads.

That's why I think the code tests should remain. Code takes time to learn, which shows commitment, and dedication to your hobby. It filters out many of those who are not serious and want to cause trouble. Anyone can learn code if they truly try. If they do not want to, they still have a lot of spectrum.

Some suggestions that might make sense:
1. A time requirement in a license class before moving to the next level.

2. Demonstration of setting up a station, operating HF rigs, making contacts, adjusting antennas.
3. Exams with lengthy narrative questions, diagrams to demonstate real knowledge.
4. Proof of contacts from logs, QSL cards.
5. Recommendations of competency from 3 Hams of higher class license.

These would be better than the currents code tests, but a whole lot harder and take more time and effort than learning code.

Steve, KQ6TI

>Really? I always thought 2 meter was a better band for distance than
>70cm?

Usually not. Given equal *physical* antenna sizes are used on both bands, and this is quite common for repeater antennas, and for users with dual band antennas, the antenna gains more than offset the extra "path loss". I put that in quotes because true path loss is the same in both cases, and is due to geometric inverse square spreading, but the formula for calculating path loss implicitly *assumes* a receiving antenna of constant *electrical* dimensions, IE always a halfwave. If instead we assume a receiving antenna of the same *physical* dimension, the extra path loss disappears because we are now intercepting the same amount of signal wavefront in both cases. Add in a transmit antenna of equal *physical* dimension, and we actually have more gain at the higher frequency.

Propagation is basically the same on the two bands (discounting the more exotic propagation modes), so the effectively lower path loss for UHF when using antennas of equal physical size will allow it to be usable over a greater distance. Of course if you are terrain blocked, you are terrain blocked on either band. UHF will give you slightly more multipath, however, and that can be an advantage if the direct path is blocked, IE you get there by a bounce. That's why UHF is often preferred when operating in built up urban areas.

Case in point. We have 2m and 70cm repeaters co-located at one of our sites and sharing a common dualband antenna. I can always work the 70cm repeater further away than I can the 2m repeater. And I can often hit it solidly in the downtown area when I'm noisy into the 2m machine. Both repeaters are GEs, well maintained, and with high grade duplexers.

CONAR Tube Tester, Model 223, with assembly and use manual.

Appears to me to be a tester part of a National Radio Institute course. Seems to be well made/soldered.

Suitcase it is in is wood it seems covered with leatherette. Very good conditiion with a few scrapes but no tears or breaks. Handle metal hardware is rusty but the handle is fine and the latch for the case is rust free.

The inside looks very good. Shiny panel, near new looking knobs, slight blemish /scrape on meter plastic cover which doesn't affect the use and is not bothersome.

Original ILLUMINATED roll chart is dated 1971 and moves freely. Update manuals with dates of 1974 and 1978 are almost like new. Has Compactron socket.

Seems to work fine. I tested a 8FQ7 which I pulled out of my tube box at random and it's an easy and quick tester to use.

It will be 15-20 pounds to ship after I box it well.

$35 plus shipping from San Jose, CA area, ZIP 95070.

Will ship UPS COD if you pay the $5 COD fee. Otherwise $35 + allowance for shipping 20 pounds in a postal money order. I will refund any unused shipping.

Ian, K6SDE
San Jose, CA area

Those who don't believe the current trend in "dumbing down" the
requirements for virtually everyhing shuld note above highlighted items
3 and 4.

When I took my test, we had to draw our own diagrams as narrative
answers, the code test required 1 minute of solid handwritten copy and
we had to demonstrate the ability to send code at the required speed.

The "use" requirement was in force when I got my First Phone license -
you had to have the old license certified by an "employer" before it
oculd be renewed. Now, my First Phone has been dumbed down to a General

Radiotelepohone Operator's license - and is not a requirement to operate a broadcast station anymore.

The CBers had a real campaign going for a while to eliminate licensing based on the fact that "frequencies were the property of all individuals who should be able to freely use them without government intervention". Worked.....didn't it????

Let's not denegrate our own amateur radio service by campaigning for its "dumbing down"!

Yo, Martin! Way to go. You're preaching to the choir, here. I'm an avid cw dog. CW doen't need justification. Does food or air need justification? Nope, they just are.....it's the heart and soul of communications, from which all other modes have sprung. It's efficient, it's a skill of antiquity that should be passed on to the future generations, it's...cw. I am not a snob about it, but anybody that wants to get rid of it is a short sighted moron. Unfortunately, that describes most of our society and nearly all of congress!

Another gizmo to try is the Radio Shack 'audio system ground loop isolator' cat. no 270-054. This device is a isolation transformer which breaks up your audio leads and prevents ground loops and hopefully rf too, but it will pass all the audio thru the transformers. This device will take two speakers. I think they are about $14. I have not had any luck with the toroids.

sigh.

I do have a masters degree in electrical engineering (I am not sure what "communication engineerig is") and I too had to learn basics in stuff I never used-- thermo dynamics, statics, dynamics, chemical engineering etc. And I, like everyone else who graduated with an engineering degree, learned what was asked of us and didn't bitch and whine about relevancy. Later, when I worked at the Kennedy Space Center as a shuttle comm/telemetry engineer, I found out that some of that learning actually was useful. That is the interesting thing about learning something you don't know, you never know when it will help round out an understanding of some problem. It is why real engineering schools require two years of "basic" engineering courses, regardless of your intended ultimate speciality.

You ignore the inference of my reply -- you again are arguing that the availability of complex technology alleviates the need to learn and understand the basics. That is inherently ignorant and dangerous -- ever read Jurassic Park (or see the movie, since reading is so out-dated)? Depending on technology without understanding the basics leans to chaotic instability.

However, what makes your "arguments" so irritating is that you try to impress an argument on why NOT TO LEARN A BASIC AND SIMPLE communications mode and why a more complex one should be required. You will never win any intelligent person with that one ---- dih-dah is A dah-dit is N, dah is T ... oh boy is that tough!. Lets spend a lot of time arguing how smart we are not to learn that outdated method. While we are at it! forget AM, SSB, VSB TV, lets get right to direct sequence spread spectrum encoding.

If you really would like to encourage amateurs to develop a more thorough understanding of complex communication techniques, than you would understand that learning the basics first, as a foundation is the way to go.

So you argue that CW is so simple, so easy, so unsophisticated, that you shouldn't have to learn it? Maybe your QPSK rigs are communicating fine on 30meters, but you are not, your machine is. Big fun. Ham radio is a hobby on communications, from basic to experimental, you argue to turn it into appliance operations -- and you are not alone.

You fail again by simply remembering -- there is a code-less HF license -- it is for 27MHZ, go listen to it

jeesh.

(p.s. if you did go to engineering school, you did have to learn about CW -- maybe not be proficient about sending and receiving morse code, but I know you didn't graduate without knowing how the mode works, how to design a

receiver/transmitter for it)
And as for the military references, try and find a good military officer that hasn't studied and learned all major military conflicts from jousting days to the gulf war -- You still have to learn the basics, even there. And no, I don't think that you speak from a theoritical perspective at all, nor from a practical one, I know a lot of hams, and few interested in DSS, Coherent CW, Chaotic signalling, etc. Why should that be a basis of licensing if it is based on relevancy?

CW is an inefficient and obsolete mode. The time spent learning it (or even using it) today,
in 1998, is better spent experimenting on means of more efficient wireless transfer of information across continents, in the HF bands. The purpose of technology, which is the hobby's basis, is to improve efficiency. Let us use our
genius in radio engineering and operation to advance technology and improve efficiency in communication. Some things become a piece of history, much like
the dreadfully inefficient MSDOS has yielded to Windows.

661. Some KW TS 520 S Questions

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-06 00:00:00 UTC
From: Brad Sheppard <bradnjenn@nf.sympatico.ca>
Message-ID: <35C91078.437396B@nf.sympatico.ca>
Source record: 135845
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.swap

I have recently purchased a used Kenwood TS 520 S. The rig appears to be in good condition and seems to work quite fine. However, when using CW the manula tells me to limit the plate current to 200mA; when I do this the resultiong output is only ~2 watts. I am wondering what is going on here because my power meter shows that I am putting out ~80 watts when I switch to SSB, so my finals are resonating properly. If I adjust my carrier level upward my CW power does go up to ~80 watts but the plate current well in excess of 350mA (meter max.).

I would also like to know if anyone has any information about building or purchasing an external digital readout unit for this rig. The analg dial is quite accurate compared to what I'm used to (Heathkit HW-101 w/ 5kHz intervals), but a digital readout would be nice. For anyone not familiar with the rig there are outputs at the back of the rig for a Kenwood EXT digital readout labelled VFO, HET, and CAR (I'm assuming VFO freq., Heterodyne Oscillator freq, and Carrier freq respectively). Myself and a friend of mine are quite capable of building a display if necessary and anyone can provide the necessary info.

Please reply via e-mail as I do not read the newsgroups very often.

Thanks in advance

664. TX While Charging FT50?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-06 00:00:00 UTC
From: Jeff <jeffj@scott.net>
Message-ID: <PNR751138141r@scott.net>
Source record: 135848

I know the manual says not to transmit on the FT50 while charging using the NC60B charger, but I was wondering why? Also, since the car adapter should only allow 13.8 volts to the FT50, no charging should take place, or should it? I guess what I'm really trying to figure out is whetheror not I can power the unit from a 13.8 power supply while in the house. Any and all comments or suggestions would be welcomed.

i am getting skunked, trying to set up a tvro, in spite of some very useful advice from some nice folks in the tvro ng. i _know_ this is not beyond me.

but no amount of diddling with the dish aiming is going to help. so that leaves me wondering about my next step (which will be checking voltages to the lnb's). the system worked fine before i moved it (i have an electronics & computer hardware background, repair included).

but what i would really like to do is use a Tek scope to check the output of the lnb's (c-band, ku band) since the ird signal strength meter seems to be giving bogus readings.

is this practical? can i construct a "simple" divider from commonly avail parts to bring "L band" down to 100mhz. has anyone tried this? am i "way over the top" in suggesting this?

is there something i can use as a "source", that would give me a "target" to test with??? some kind of amateur kit/project for a low-power xmitter. does Radio Shack have anything that could be used/adapted? i used to have a suplus radar test station, the waveguide looked about the same size as c-band, but of course that is _long_ gone, now ;-).

any suggestions (or speculation) welcome.

thanks,

loren

> frequency then beeps and displays er2. I checked the Rat Shack
> web page, no help.

THAT'S your problem - it's RADIO SHACK, a division of TANDY Corporation, and
here's what's on the RADIO SHACK Web site:

HTX-202 (190-1120) Error Codes Faxback Doc. # 15722

Your transceiver has two error code displays. Refer to the following for
an explanation of each error code.

Er1: INTERNAL RAM ERROR

Er1 indicates the transceiver has detected an error in its battery-backed
up operation memory. This is the most commonly caused by a low lithium
backup battery, but can also be caused by static discharge, or a physical
shock. To clear the error--

1. Turn off the unit.
2. Press FUNCTION and CLR (the D key).
3. While holding these keys, turn unit on.

This will reset unit and clear memories.

If the transceiver frequently displays the error, have the battery replaced by
an authorized Radio Shack service center.

ER2:PLL UNLOCK ERROR

Er2 indicates the transceiver's PPL section has unlocked. Have the
transceiver repaired by an authorized Radio Shack service center.

Regarding the US Amateur Radio license restructuring proposal by the ARRL:

I am currently a General class licensee, and an ARRL member. I obtained my General upgrade this past January. Prior to this, I was a Tech Plus licensee for around ten years, and a Novice before that for two years.

I was tuning across the 40m band last week, and overheard several Advanced and Extra licensees bemoaning the proposal, bleating about how they have already resigned their V.E. status and quit the ARRL. This is stupid! How I wished the discussion were being held in the General sub-band, so some opposing viewpoints could be heard.

I think the existing license structure is flawed. Disallowing Tech Plus operators HF voice below 28 MHz is to prevent them from talking to those who would encourage them to upgrade. This effectively cuts off the Tech Plus from most of the HF community, and has driven a wedge between two large segments of the amateur population. The US code requirements are out-of-line with the rest of the world. I know of many skilled Tech Plus operators who have either sold off their HF equipment, or have quit the hobby entirely - a shame. Clearly, somthing needs to be done.

In attempting to solve the problem, the ARRL may have gone a little too far. For instance, I am concerned that giving a Novice what amounts to a General ticket will remove any incentive to upgrade. Novices and Tech Plus operators should have to pass the General written elements BEFORE getting those HF voice privileges. However, the only alternative to the ARRL's proposal may be to maintain the status quo for many more years, and that is completely unacceptable. I understand that last month, only THREE novice tickets were issued.

Ever demonstrate low band DX to kids? When you make a phone contact, they can hear and understand what is going on. WOW! You're really talking to someone in Russia or the Canary Islands... COOL! Make the same contact in CW and they are lost. CW is alien, and appears to be a formidable obstacle to most people, regardless of the reality. Yes, we're a society of instant gratification - get over it...

Amateur Radio is losing steam and must be revitalized to offset new and exciting modes of communication that have no license requirements (i.e. the ubiquity of the Internet and cellular telephones). Our government has demonstrated a willingness to auction off underutilized radio spectrum to the highest bidder. If there aren't enough amateurs to justify and defend our frequency allocations, they will certainly be diminished.

Does anyone really think "lowering the standards" to 5 WPM code for HF phone privileges will result in a massive influx of CB-type operators? I don't think so! Rather, people with a genuine interest in radio will be given a chance to experience the thrill of making their first DX phone contact. Personally, I think we should retain the Novice, but add Novice HF phone sub-bands in 80, 40 and 20 meters, and dump the Extra Class. (Asbestos underwear on! ;v)

I think the ARRL proposal will go a long way toward increasing public awareness of, and interest in our hobby. I am all for it... YES!

Regards,
Michael Borowiec, N9EUZ

681. request for comments on Standard C510A

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-07 00:00:00 UTC
From: Jeff Wight <jeffw@ichips.intel.com>
Message-ID: <usoj8whfy.fsf@ichips.intel.com>
Source record: 135616

I've not seen many comments on this newsgroup regarding the Standard C510A dual-band HT. The features, size, and price seem about right for me, but I haven't seen much commentary on this radio. I'm looking for information beyond what is found on the data sheet.

Are there any satisfied/dissatisfied users out there who would care to comment on their radios?

How is the audio output?
Is the stock antenna any good? Any suggestions for replacement?
How is it in terms of ease of use (button layout, software)?
How is the output quality on TX?
Are there any reviews of this critter on-line somewhere (or in print)?

I'm considering this lightweight HT for carrying with me on backpacking, hunting, and scouting trips.

Thanks,

-Jeff

TECH AMERICA does buy closeout models at "liquidation" prices from Alinco. (DX-70T-DJ- 190, dj-S41 ect.). Large companies like Tech (Tandy) have no allegiance to the ham hobby or community, and if toasters, radio controled cars or whatever are the next "big" consumer electronics item in a few years, they'll drop ham like a hot potato, after screwing up the amateur retail market, and forcing out of business many smaller local ham dealers that have always helped the ham community, and stuck with the products thru good & bad. Give your business to a "real" Amateur shop that isn't trying to juggle selling you calculators, toys, boom boxes, superman telephones and other stuff at the same time.

683. FS SB-220 amp, super shape $550

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-07 00:00:00 UTC
From: Steam <steam@megsinet.net>
Message-ID: <6qg2e6rpi2@news.megsinet.net>
Source record: 135618

I'm selling a Heathkit SB-220 amp. This amp must have had very little use.
The cabinet, face, and meters are in beautiful shape. A couple chips on the
edges of the cabinet, and the feet are a little beat up. I bought it from a
local
ham and used it for a very short time with my Kenwood ts-440s. I was
going to put a soft-key into it, but never did since I don't use it.
It has full output on all bands and tunes nicely. I also have the original
manual. It can be seen on my web page: http://www.megsinet.com/steam
and go to the ham radio page.
Price is $550. I'd prefer pickup in the Chicago area, or I'll meet halfway
up to a reasonable distance. I'll ship if I have to, but will need to
know how to ship without damaging the unit. It's quite
heavy and the tubes are fragile. Price would then be plus shipping.
If you're interested or have any questions, please e-mail or call me at:
708-795-7739.
Thank you ... Mike, N9IVO

>
>Thanks ! - Vince

If you are wanting to use a 1/4 wave antenna, the
formula is:

234/ f(MHz)

234/463.000 = 0.505 feet X 12 = 6.06 inches

>without a total reset?

I am not aware of any key combination which will do this, but the extended receive can be trivially toggled on and off with Icom's computer software and cable (though the radio will refuse to have the extended receive turned off if there are any frequencies in memories which would be disallowed by doing so).

I sure hope your not upset that it seemed to have knocked some of
the 800mhz out of the display! because if its like mine that's all it
does!!!!!
is display 800mhz and above.. my receiver is dead! up there.
I have read so many post's and comments on how much better the Q7A is on
out of band rx then the standards, yaesus and so on... well all I can say is
my standard
c510a blows the q7a away..... I can remove yes remove the antenna on the
510a
and receive a station on 900 band or 800 as far as that goes, at half to
full scale, with
great audio, and try it on the icom q7a and NOTHING! I mean nothing in the
rx'er at all....even on a outside diamond antenna.... pretty bad. I don't
know but it is getting old the false advertising these people are doing. I
think if your right under a 1000 watt signal
on those freqs you might and I mean might get the rx'er to make a
sound!!!!!!!!!
other than that its a great radio in the ham bands and a little above and
below..
The q7 does a great job on the BC band.OFF MY SOAP BOX
All I can say is I will keep my c510a.... much better receiver!!!!
best of luck with the ICKY'S
73
TROY.

Source record: 135656

I've done the diode thing and here's what happened.
136-174 and 400-470 tx. I lost more rx in the 800 band and a big chunk of the lower 900 band. I acquired some additional irregularities in the VFO mode. CH 1-12. The auto repeater shift is no longer functioning. This is likely dut ot the fact that the mod makes it a european model instead of US version. I also read about a mars/cap mod where you remove the "A" diode on the lower left after removing the back cover. If any one knows if this changes anything, please let me know. The radio works pretty good but I will have to get rid of it because it does not duplex crossband. (one of the main reasons for me having it) I use a crossband repeater at home and can venture a mile or two from home and still cover a large area on simplex. Does anyone want to buy it? I just got it at the Jacksonville Hamfest for 200 bucks. The ICOM guy said it would ot-perform th Standard C508 but all I can see is the TX coverage is greater and the ICOM is much harder to mod.

You've got the point. In all that discussion, I've rarely seen someone who has passed the 20 wpm barrier aknowledgeing that could exist other ways to test ham candidates besides CW. The mandatory Morse Code testing was created around 80 years ago and kept untouched because there was a general credo that it could be useful in war times. The world, the laws, the costumes, and especially technology, have changed a lot since then. Hey, AM used to be popular until the 70's and now is almost gone, replaced by better transmission modes. The Coast Guard, Navy, Army, Air Force, etc. have dropped CW, because it's obsolete. Only a few ham operators insist it's the best thing in the world to separate boys from men.
There is nothing wrong in loving CW. But should it be mandatory just because some hardliners love it? Well, in this times of health and fitness I propose running instead. Every ham should be able to run 10 km to get a license. At least it's healthier than CW (and could be the only thing to do in some situations, when even CW fails!). If you love dih-dahs, great! But do not force it down on everybody's throat. It should be an option only. Imagine if everybody had to type 100 wpm to upgrade their computers or to have access to the Internet...

That's it! To get a contractor's license you do not need to build a house on the exam. What is more complex and encompasses more responsibilities: operating a HF rig or erecting a house?

Most of our troublemakers are extremely committed and dedicated to
causing trouble. Night after night they come back and tirelessly jam
and curse with nary a break. That takes dedication, the same sort of
brainless dedication exhibited by conditioning oneself to emulate a
modem. Perhaps there is no wonder that Extras receive a disproportionate
share of NALs. The compulsive personality trait they demonstrated
to become a dumb modem is also exhibited in their on air behaviors.

>If they aren't metal....you shouldn't have bought the house.
>Use 10 gauge or heavier solid copper ground wire..

In the City of Seattle, the code requires every home electrical service be grounded in the following manner:

* 2 8-foot galvanized ground rods, no less than 8 feet apart, driven all the way in.

* Nothing smaller than a continuous #6 bare copper conductor, running from the rods to the neutral buss on the main panel. Special brass "acorn" ground clamps are used to secure the wire to the rods. Don't use the two-piece clamps -- they oxidize easily and don't do well over the long haul in weather. The acorn clamps cost about $2 - $2.50 each; the rods run $4 - $7, depending where you buy them.

* A primary copper bonding wire is required from the neutral buss to the cold water pipe. Recent code changes require the pipe to be bonded within 5 feet of its entry into the house. A lot of plumbers are installing dielectric valves these days, which breaks the continuity of the cold water pipe. Some people also cut pieces of plastic pipe into the system. A 200 amp service requires a #4 copper bonding jumper; a 100 amp requires a #6. Since you're not running anywhere near these loads (I hope!) a #10 should do fine. But the stuff is so cheap I'd probably go with at least a #6.

*ALL plumbing, INCLUDING the gas pipe if there is one, are required to be bonded together. For this, you can use the two-piece clamps that torque down with large screws. They have a hole on top with a set screw for threading in your ground wire. I like his better than a grounding strap, as it's really secure.

I have problems with the gas pipe requirement, because if lightning strikes the system, any leak in the gas line will make your house look like Mount Saint Helens on steroids. The inspectors counter by saying they don't want to take a chance on the gas piping becoming energized,

hence having a blow-up caused by errant voltage or a dead short. They also seem to think the gas piping will provide additional grounding as it enters the soil outside. I'm not so sure. Washington Natural Gas is running around town replacing all the old steel underground feeds with bright yellow plastic hose!

So, is bonding to the gas pipe code? Well, it is here. It might not be where you are. I'd call the local electrical inspector and ask him before hooking up. Or just go with the ground rod and cold water pipe.

Cheers,

JJ

You are mistaking *old* for "the basics". The Shannon relation is basic.
The Nyquist criterion is basic. Morse is just old. Wilson uses it in his
text as an example of a particularly poor modulation and coding design.
But other than serving as a bad example, it really has no relevance
today.

Tim!

A few comments. Tactical radios are specifically designed to provide very short range communications and this in variable short distances. The range control is usually done by providing a "range" of antennas, a short "rubber duckie" for comms up to 300 Meters, a "(measuring) tape" antenna for up to 1.2 kilometers, and a vertical with ground plane and a 30-40 foot mast for comms up to 7-10 miles. This is because you do not want the enemy to be able to hear your "tactical" movements/decisions/presence/comms. They are designed for use by small (squad/platoon) units for their INTER-COMMUNICATIONS. The PRC-25/77 is an example of a longer range tactical unit. I have used these in desert and jungle warfare and they can be relied upon to go unit to unit for 3-4 miles. Sometimes further. They can communicate with a High-Power "Tactical Frequency" radio with a log periodic or other beam type antenna reliably for 10-20 miles, esp-ecially if the "command & control"(high power) set is up high and/or has a tall tower.

The SGC-2020 is the beginning of what could become a fantastic com-munications set. It will never be a "tactical" radio. I have regulalrly used one to communicate, with one watt output, 70 miles and have carried on daily conversations at 27 watts from Central America to Bogata and to Washington, D.C.. If its design hadn't been "altered at the last mom-ent" and "a new inferior design shoved into production in the last 60 days" it could have been a fantastic set. Hopefully SGC will finish the orig-inal design, clean up the many niggling problems and a few quite serious problems and make it into "ALL IT COULD BE". Its concept is fantastic!! It is selling like pancakes and, from what I can discern, has a fairly high dissatisfaction ratio from seasoned operators. It is BUILT LIKE A TANK. I have run over mine, in a rubberized canvas carrying case, with a jeep twice. Had to replace the main tuning knob from one of

these encounters. (P.S. This was an equipment evaluation test, not carelesness on my part.) Give SGC a while and this radio could be the best radio on the market, especially for the buck$. Lets hope they continue and do it the SGC way. Their Battery pack and Front case are a sick joke. These were made for a few "military" trials and were priced for this market (along with the infameous $4000 toilet seat). I have taken my unit and put it, along with a Z-Match with integral led swr meter, field expedient antenna kit, headset/microphone, and Gates hermetically sealed Lead Acid battery pack with solar re-charger in a Military Surplus air and water tight emp proof fiber-glass and aluminum (night vision goggles) carrying case with about 1-1/2 inches of foam padding. This all cost me less than $150 on the open surplus market. I've dropped this unit from a helicopter 75 feet to the waiting ground troops about 50 times. "She takes the likken and keeps on tikken"!!!! Lots of birdies, areas(freqs) of signal dropout, insufficiently narrow bandwidth/filtering, no noise limiting at all, weak audio on both transmission and reception, but the best idea in ham radio in the last 40 years. Come on SGC, I dare ya!!!!! Correct the ills and you'll never look back. It might even make you a competitive ham radio manufacturer. It will also sell to the para-military market by the 10's of thousands.

Probably the same way that they offered the DJ-190 for $99. It is the remaining
stock of a discontinued model, and they bought the lot at liquidation prices.

Most of my ham friends in AZ have backup systems like
solar panels and/or propane/diesel/gasoline powered
generators in addition to food, water, and weapons.
IMO, all *serious* hams have backup power.

Much hotter on RX than the 508 and VX-1R (I own both), and much better
RX audio (bigger speaker). Also seems better on 2m TX and receives FM
BC (WFM) better than any other ham transceiver I've used.

Mine is a "keeper" ... and thanks for the info re mods; mine will stay
unmodified!

Phil

724. Re: VX-1R scanning problem ??

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-07 00:00:00 UTC
From: clintbrad4d@earthlink.net
Message-ID: <6qf4fj$16a$1@nnrp1.dejanews.com>
Source record: 135673

>>Scan Any Frequency In any Band!

From the Unofficial VX-1R Mods Page:

One thing I noticed about the Yaesu VX-1R is when scanning the memory channels, the VX-1R would not scan V-HAM and U-HAM frequencies at the same time. If I'm in the V-HAM mode, it would only scan V-HAM frequencies only. If you want to scan any frequency in any band, and have any version of the Programming Software (ADMS-1) follow the directions below:

1) Make sure you have the programming software (ADMS) software installed and working properly

2) Locate the "yaesu.ini" file in the windows directory

3) Open the "yaesu.ini" file

4) add the following: AllowAnyBand=1

5) Save your changes, program (examples below) some freqs. and upload to to radio , and you're done

This is what my 'yaesu.ini" file looked like before the modification:

```
[VX-1R Programmer]
DataDir=C:\YAESU\VX1
Com=1
TemplateFile=C:\YAESU\VX1\FREEBAND.tpl
```

and after adding the modification

```
[VX-1R Programmer]
DataDir=C:\YAESU\VX1
Com=1
TemplateFile=C:\YAESU\VX1\FREEBAND.tpl
AllowAnyBand=1
```

Basically what this modification does is let you select and change the Band setting(V-Ham, U-HAM, VHF-TV etc...) when you are programming. Before the modification, if you entered 145.000 the default setting in the Band box would be V-HAM, and you could not select or change the Band setting. After modifying your yaesu.ini file with AllowAnyBand=1, the Band box is now highlighted and you can select any mode you want that frequency to scan in. All this has to be done with the ADMS-1 software (Version 1.01, 1.02, 1.03). Kinda neat. Here's an example:

Let's say I program in the following frequencies:

1) V-HAM 144.450
2) V-HAM 146.000
3) V-HAM 146.970
4) V-HAM 145.450
5) U-HAM 443.450
6) U-HAM 446.750
7) U-HAM 447.000
8) ACT-2 857.5000
9) ACT-2 835.8500

If I'm in theV-HAM memory band and I start scanning, the only frequencies that will scan are the four(4) V-HAM Frequencies. If I go to the U-HAM band and start scanning the only frequencies that scan are the U-HAM Freqs.

Now, what the modification does is it allows you to change the default Bands (V-HAM, U-HAM, etc.) regardless of the frequency you entered. Let's say I want to scan all 10 frequencies in the V-HAM band, I would change the Band setting so all frequencies have the V-HAM setting Like bellow:

1) V-HAM 144.450
2) V-HAM 146.000
3) V-HAM 146.970
4) V-HAM 145.450
5) V-HAM 443.450
6) V-HAM 446.750
7) V-HAM 447.000
8) V-HAM 857.5000
9) V-HAM 835.8500

Notice all frequencies are in the V-HAM Band even though the actual frequencies are not.

UPDATED INFORMATION

Some radios, after modifying the template file will scan VHF and UHF frequencies, but will not stop on active UHF frequencies while scanning. What has been discovered (some firmware/configurations), is the radio wants to have *special* transition frequencies/memories. Let's say you go from H-10 - H-462.575

1-451.525
2-451.600
3-454.975
4-463.750
5-462.7125
6-154.445
7-152.500
8-154.815
9-153.025
10-154.445

The radio seems happy with the UHF/VHF frequency transition between 5 & 6 and the transition from 10 to H (Home channel). But lets say I reprogram 10 to something else. It will scan fine from H to 10, but when it makes the

transition from 10 to H, it won't receive anything on the UHF - you might see the freq blinking, and if you stay on that channel it seems to be receiving, but there is no signal there. This transition problem is not necessarily frequency dependent, but tied more to some hidden parameter for the memory channel.

An example, if I go into the VFO, and set it up exactly as memory 6 is configured (all parameters same), then store it back into 6, there is a transition problem. But if I go to 10 and store it back to 6 there are no transition problems and scanning multibands works fine. From my perspective, the old and new 6 were identical, but there must be something different!?

So, if you are having problems, start by grouping all UHF and VHF frequencies together, and start playing with the transition frequencies.

If I am not mistaken, I believe that the Radio Shack model has some type of
lithium battery inside that can become drained over time. Open it up and
have a look-see at it. Find the correct replacement for it and install it.
It should stop giving you that ER2 message. Hope this helps!

727. Re: Modified radio communication with FRS

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-07 00:00:00 UTC
From: Dan Grassetti <dangrass@pacbell.net>
Message-ID: <35CAA797.921D087D@pacbell.net>
Source record: 135676
Cross-posted to: alt.radio.family,rec.radio.amateur.equipment

I was a little surprised by the assertion that transmit power dropped off so precipitously, so I tested my Yaesu 51 with my trusty Micronta power meter with the following results: (using the car cord...~11v)

440 mhz 3.2w
450 mhz 3.2w
462 mhz 2.5w

144 mhz 5.8w
146 mhz 4.2w
155 mhz 4.6w

Bottom line...output varies on frequency, but not nearly to the degree indicated in the prior correspondence...I would say that, legalities aside, a dual band Yaesu would make a rather powerful FRS transceiver...

>that.

IIRC, power output on a HT like the ADI depends on the input voltage,
so the fatter battery pack may run at 12V instead of 7.2 or 8.4.
Doesn't mean I can hook it up to a wall socket and get 100W, though.
:)

I'm not really worried about house power. A 12V 3A supply would
probably work. For most purposes, I'd probably do well with a spare
pack and a quick charger; I have a second-hand charger from W&W
Associates which only needs a new well to match whatever HT I get.
Add a speaker mike, an Anli "fishing-pole" antenna, and my accessory
budget is probably set for a little while.

The SCAN switch allows you to MANUALLY flip between memory channels. It's
not automatic, and will stop when you take your finger off the switch.

> Unfortunately i didn't get any op manual, so i was wondering if
> any new of the f- key combinations on how to make it scan the mems,

See above for scanning info.

> examp; 107.2 103.3 and how do i activate this, it has a switch on
> top, when i put it on it does not stop the squelch.

The u2at is PL on transmit only. It doesn't decode the incoming PL to
squelch the radio. Gotta remember..this is a real basic radio, very little
in the way of bells and whistles. I had the list of PL tones/switch
settings, but apparently I've misplaced them. If I find them I'll
drop you a note in email.

732. FT50 microphonics

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-07 00:00:00 UTC
From: wb0ddz@aol.com
Message-ID: <1998080716254600.MAA27959@ladder01.news.aol.com>
Source record: 135681

I have a new Yaesu FT50RD wihich has terrible howling on two meter receive, with the audio turned up loud and a strong receive signal. I purchased the unit from AES, Milwaukee, and they say they have never encountered this problem. I am wondering if anyone else out there has experienced two meter receive microphonics. Find a strong carrier, minus modulation, turn up the receive audio all the way, and put your hand over the speaker louvres. A howl will start. Also if the case is lightly tapped, a "clank, clank,clank" will be heard. Some repeaters will also have a hollow, echoey sound. The 440 side, using a different vco module doesn't have this trouble.
I have seen this problem on three FT50 units, and can't believe I'm the only one with the problem, as AES might have me believing. I can't imagine purchasers of these units accepting this annoying flaw..
Any response would be appreciated.

This is a PLL unlock error. The transciever's PLL section has unlocked. Bring
it in to radio Shack to have it fixed.

See the HTX-202 manual for this same info.

I own both radios and use the both of them. However, I have a bias
toward the Radio Shack Unit.

In the field, it's easier for me to set the Radio Shack unit for
whatever I want. Also, the Radio Shack allows external 12 volt
power to be plugged into it. Which, for me is important when I
work an event and need to go all day long.

On the other hand, the Icom is a smaller and lighter unit; so
when my son, Michael (KF6LJA) works an event with me, he'd rather
use the Icom.

Overall I think both Radios are very good and you'd be happy with
either one.

736. Is the Basic Stamp OK with RF ?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-07 00:00:00 UTC
From: bdiaz@my-dejanews.com
Message-ID: <6qfk8ljfb1@nnrp1.dejanews.com>
Source record: 135685
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Parallex makes a "small computer" called the Basic Stamp. The unit
is designed for simple control operations, where a short Basic program
can control or do something.

I'm thinking of using the Basic Stamp I (Rev. D) to provide CW ID every
10 minutes with my ATV transmitter (the module was made by PC Electronics).
In my case, my ATV transmitter is in a remote controled car and feeds a
video signal to my TV. The transmitter is putting out only 80mW of
power; not a lot, but just enought to reach my TV.

Has anyone used a Basic Stamp with any RF equipment?

Does the Stamp put out RF noise that would interfere with the ATV signal?
(Assume I put the Stamp in the same metal box as my ATV transmitter.)

OR . . . Is the Stamp sensetive to RF signals?

Hello All-

I recently bought a Uniden HR2600 for 10m. The antenna I am using is a cheap mag-mount CB/Ham antenna from radio shack. The bandwith on the antenna is pretty small, and I was wondering if there is such a thing as an antenna tunner for 10m only (if it covers 11m too, it would be great). I am looking for something pretty inexpensive.

Thanks alot,

jeff

Jeff,

For the money you'd spend on an antenna matcher, you could buy a decent broadband antenna. Hit up the CB shops and see what kind of antennas they have for the "export model" CB rigs. Something like a Penetrator would have much wider bandwidth because of its large, low-Q load coil. Of course, you'd have to give up the mag-mount (a wise idea anyway, in my humble opinion).

If you're dead-set on a tuner, any of the small commercial jobs will suffice. I've always had good service from MFJ tuners. I can't recall how long it's been since I've been without one in my station... back in the early 1980s, I'm sure. I just hate using a tuner in a mobile setup because they take up so much room. I'd rather get the right antenna.

i have an interesting project involving ham radio and woodworking. I am wondering if there are many Hams out there that also do wooodworking. I would appreciate knowing if you are one of those hams. If so, send me your call or e-mail address. I will not solicitate, just want to know if there is any interest out there.

Regards + 73,

Bob, NF7E

752. DRASTIC PRICE REDUCTION (or trade) Tinsley Labs classical cass telescope

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-07 00:00:00 UTC
From: jpl@hoserve.ho.lucent.com
Message-ID: <6qfnmh$fae@nntpa.cb.lucent.com>
Source record: 135701
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

I MUST sell this asap -- I've dropped the price to the best
offer over $1200. An EXCELLENT value for someone who wants
a classic, top quality scope.
Contact me at 732-949-0664 or via e-mail.

Original ad follows:

FORSALE -- TINSLEY LABS CLASSICAL CASSEGRAIN TELESCOPE !!!

I have for sale a Tinsley Labs 8-inch Classical Cassegrain
telescope, complete with the original German equitorial
mount and clock drive. Tinsley produced these fine scopes
in the mid 1960s and are known for their fine optical and
mechanical properties. They were (are) research quality
instruments which are quite rare and retain their value.

In mint shape, they go for around $3000. The one that
I have is in very good condition, but needs a few minor
items to bring it to "mint", as follows:

- mirrors are excellent, no scratches or chips, and
bright. Although very good and workable, a
recoating would make them mint.

- clock drive needs an external 12V battery pack and
rheostat to make it operational (this is as it was
intended). A nicad pack or motorcycle battery would
be appropriate.

- A low tripod or pedestal base (about 20" high) and
"rocker box" is needed for the equitorial mount to
sit on.

- the optical tube has some scratches in the paint and
a small dent, which absolutely does NOT interfere with
the optical path. Paint scheme is the original Tinsley
gray.

Thats about it. I just don't have the time to use this
scope and it's too valuable to just let it lay idle.

I'm was asking $2150. for scope and mount (and absolutely will
NOT sell them separately) but am open to offers. Please, I must

find a good home for this; make a bid!

The equipment is located in Monmouth County, NJ. For
further information, please contact me.

Thanks,

Joe Levantino
Lucent Technologies - Bell Laboratories
732-949-0664 (days)
jlevantino@lucent.com

PS -- I will consider a trade for equally valued Amateur
Radio Equipment, in particular a high quality, heavy
duty, HF linear amplifier (Ten-tec, etc).

You say my argument makes sense on the "surface", well so does
everything you have mentioned. So!!!

>While your argument makes sense on the surface, I wager the dropping of
>(more stringent) CW testing will not be accompanied by an increase in
>standards elsewhere in the test. I site the history of the testing program
>here as a clear example of how standards slowly, but surely drop.

There are some people that definitely fit into the catagory you
mentioned, I do not fit into that mold however. I have "credit" in
13WPM CW as I have "credit" in three semesters of college calculus. I
have no use for either one and find neither one enjoyable or usefull
and after acquiring the passing grades(so I can go on and acheive what
I really wanted) for both fields of study, have promptly let them
go. Haven't missed calculus in 25 years.

There is some truth to the fact that why know the nitty-gritty about
capacitors and resistors if there is no radio kits available to
assemble anymore? How many radios have you built lately? Or are you
running one of those high priced solid state rigs with a solid state
amp, beam rotor and all the extras?

I am not one of those that is advocating lowering standards, just
changing the testing material to something equally as challenging but
usefull for most hams on an everyday bases. You don't need to know
calculus to be a brain doctor but perhaps if you want to be a rocket
scientist.

>It has been my experience that many opposed to the CW requirement simply
>don't want to spend the extra effort, regardless of the subject. They will
>be no more accepting of an increased technical requirement than they are

>RS and buy an HT. Why should they have to learn all that irrelevant stuff?
> They aren't building radios. All they need to know are operating
>protocols and a little bit on safe operation.

See my statement above, I have credit in 13WPM and it was ugly from
start to finish.

I am not bitter about CW. Really doesn't matter one way or the other
to me about testing or not. I have acquired all the privleges I care
for. In fact any form of HF doesn't excite me anymore. Researching
VHF radio site loctions, land ownership, repeater equipment
financing,-acquistion , linking radios, finding the area of coverage
and installation interest me much more than..... making very brief HF
contacts to far off stations that sound like Donald Duck, through
static crashes, thats if the band is up or down, AND then all you get
is "you are a 59, see ya". OR someone running a big amp, with a beam
overpowering everyone and not even responding to your barefoot weak
signal. Hmmmm, lots of fun for lots of input and very little output.
To each his own.

It just kills me to hear city folk, while traveling on vacation
outside of their small world, trying to get through to a far off
repeater with their little bitty HT and wondering why they are
marginal. I might add that some of these folks are big HF-CW fans, by
listening to some of their conversations with the locals. My $0.02
worth as well.

Ross

SOLD MFJ-948 Deluxe supertuner, as new, used once then put away, including docs and original box. $75 shipped CONUS.

MFJ-1026 Signal Enhancing Noise Filter. Used briefly and then I fixed my noise problem so it's surplus. $90 shipped CONUS.

MFJ-1272MYV TNC/Mic switch for Icom/Yaesu to Kam TNC. As new including full docs and original box. $25 shipped CONUS.

MFJ-8621 Packet Tranceiver, bought new for use as a dedicated EMWIN receiver. This was purchased as an experiment. I wanted to re-crystal for 150.435 and use it to capture EMWIN local feed. As it turned out, the wideband nature of the front end of this rig wasn't selective enough. But it works fine as a packet rig on it's stock freq of 145.01. So rather than fiddle with it any more I'm selling it, and will toss in the EMWIN crystal as well. Unit is in mint condition, working perfectly, with original docs and box, also including the extra crystal for those in a less rf-congested area. $90 shipped CONUS.

SOLD Bencher BY-1 paddles, mint, in original box. Bought these and have never used them. $50 shipped CONUS.

Diamond SX-200 SWR Bridge, in as-new condition with original docs and box. Bought an MFJ-259 right after I bought this, and never used it. $75 shipped CONUS.

I'll swap for recent KAM or KPC TNC equipment, or a TenTec 6 meter transverter.

Terms are postal M.O. payment, I'll supply phone # and references if requested. Shipment will be via Certified Priority Mail.

Thanks and 73,
Ron Ricketts WA5VFA

768. FT-920 - AM Transmitting?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-07 00:00:00 UTC
From: martyt@pobox.com
Message-ID: <35cb7516.102698222@news.supernews.net>
Source record: 135800

A question for the Yeasu FT-920 owners out there:

In order to transmit in AM mode, do you have to buy the 6KHz AM crystal filter??

My (new) rig has the AM passthru board installed and I can receive AM just fine, but when I try to transmit, I get "Error" on the frequency display...

Seems a bit unreasonable for an already expensive "all mode" rig to require 2 - $100+ options in order to make it work on FM and AM...

Not 5 minutes after I posted this, I found the answer...

Turns out menu item U-70 controls the signal path through the AM
filter (or the passthru board) - it was turned off, so I couldn't
transmit. Turning that menu option on made it transmit as expected.

Chalk one up to RTFM... ;-)

-Marty

Source record: 135455

Marty, you may be closer to the real reason for your problem than you think when you mention blinking your eyes. The problem is right under your eyes!

When I got my ProSet I intended to use VOX on my IC-765. I got everything set up OK - no problems there - but I quickly found that with the mic in front of my mouth where it belongs that every time I would exhale either through my mouth or my nose, the rig would key up! No amount of adjusting would help, other than to move the mic out of the way when I wasn't talking and/or holding my breath between sentences! Not too swift a way to work . . .

So, like Louis, and I suspect almost all headset/mic users, I went back to the old footswitch and had no further trouble.

The headset/mic is a great operating aid and I wouldn't go back to anything else, but it just doesn't work with VOX as long as you insist upon breathing!

Source record: 135463

I have a Yeasu FT757GX HF transceiver and matching FT757AT automatic antenna tuner for sale. The FT757GX covers 160-10 meters with general coverage receiver. 100 watts out AM/FM/CW/SSB. The matching automatic antenna tuner plugs into the FT757 and changes bands when the radio does. It is rated at 150 watts and has a built in dummy load. I have original manuals for both units. I have the Yaesu hand microphone that matches the Yeasu series of HF rigs that I will include also. I am looking to purchase a FT920 and do not need two rigs. I will ship to continental US for $650. The units function properly and are cosmetically an 8 out of a 10.

782. Re: JUSTIFICATION FOR CW

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-08 00:00:00 UTC
From: CommQuart <commquart@erols.com>
Message-ID: <6qicm2$8lp$1@winter.news.erols.com>
Source record: 135465

Gary

Please drop the engineering analysis; the point is thousands of
amateurs enjoy and only operate CW as radio amateurs. So long
as hams use the mode, and enjoy the mode, it is revelent to the persuit
of the hobby. The majority of homebrew or kit activity is now aimed at
the QRP operator.

I have no problems with no-code licensing, or reducing the exam requirements
for CW. What I fear is the "next shoe dropping". Once the no-code
propronents win this battle, and CW is eliminated or thoroughly dumbed
down on the exam, the next "battle cry" of the unwashed masses will be
the elimination of the CW subbands. "If it isn't required for a license,
why should
they have those frequency privileges?"

Regards

Peter

Hi All,

I'm cross posting this because I'm looking for a company, A few years ago, I saw an ad in QST Advertising Luke Power supplies. I beleive they were based out of Michigan. Anyhow, They mostly made commercial power supplies... But they made a few models aimed at the Ham Radio people. and I've asked around and no one seems to know what happened to the company, does anyone know if the company still exists?

and if so, do they have a website? and a number?

Please help me here!

Thanks,

Dont' laugh, but I get this great idea of starting a radio station!!!!(perhaps because of the many radio stations I am able to access through my computer and the internet).

First of all, I do not have the faintest clue about this.

Could anybody provide me with advice, comments, books, vendors, websites, etc.

This should not be from the point of view of a corporate setup with lot of access to financing, but rather , a hobby, basement, volunteer type of thing.

I am particular interested in music, and broadcast range should be from NY to Caribbean(you probably guess the type of music)

I am very computer and internet literate, and would like this to be very computer dependent as possible.

Short-wave, FM, AM, etc

Every piece of information will be highly appreciated

there are a lot of assumptions here. First set the How old limits.
Are we talking about 1949 Haliicrafters, 1979 Kenwoods & Heathkits,
or 1980 ricebenders (stepo children of the Kenwoods)

Gary Coffman wrote:

Parts are still available, but may be in different packages. IE plastic
or ceramiccapacitors vice paper ones. Film resistors vice carbon.
Patience can even
dredge up the older tubes. Check .boatanchors.

> >They are more ruggedly built.
>

Is this a standardized test? I'm not sure of many of todaysas well as
older radios that survice 3 foot drops to floors --
unless covered with rugs or other padding. My TS-520
kept working after a two foot drop to a padded rug covered
floor.

I've never tried to move a low segment unit up to 440, but based on
what I've seen on the mid segment rigs, I wouldn't even try it. It's
too easy to get one in the right segment to start with.

801. FS: VHF Power Amp, misc ham gear

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-08 00:00:00 UTC
From: rrickets@ix.netcom.com
Message-ID: <35ccdef7.37070436@nntp.ix.netcom.com>
Source record: 135484
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Motorola VHF power amplifier - 4 in/50+ out. This is an item I bought to use with the packet radio mentioned below, to boost its output to a more usable level. I haven't used it much, but it is clean and works fine. Tests using my wattmeter indicate 5 watts drive give over 70 watts out, 1/2 watt in gives 12 watts out. It was manufactured for 150-174 Mhz, but has been 'tweaked' down for 144-148 Mhz. About the size & weight of a typical brick amplifier, and uses 13.8 VDC. Input & output are SO-239 connectors. A bargain at $65 shipped CONUS

MFJ-8621 Packet Tranceiver, bought new for use as a dedicated EMWIN receiver. This was purchased as an experiment. I wanted to re-crystal for 150.435 and use it to capture EMWIN local feed. As it turned out, the wideband nature of the front end of this rig wasn't selective enough. But it works fine as a packet rig on it's stock freq of 145.01. So rather than fiddle with it any more I'm selling it, and will toss in the EMWIN crystal as well. Unit is in mint condition, working perfectly, with original docs and box, also including the extra crystal for those in a less rf-congested area. $90 shipped CONUS.

MFJ-1026 Signal Enhancing Noise Filter. Used briefly and then I fixed my noise problem so it's surplus. $90 shipped CONUS.

MFJ-956 Antenna Preselector, 150 Khz - 30 Mhz
I used this on my old general coverage receiver and retired it when I got my R8B. Tunes longwire on any coaxial antenna for RECEIVE only. It is a passive preselector, so it doesn't require any power. This is not meant for transmitter tuning. In mint condition with all original packaging, a steal at $25 shipped CONUS.

SOLD MFJ-1272MYV TNC/Mic switch for Icom/Yaesu to Kam TNC. As new including full docs and original box. $25 shipped CONUS.

Diamond SX-200 SWR Bridge, in as-new condition with original docs and box. Bought an MFJ-259B (great piece of gear!) right after I bought this, and never used it. $75 shipped CONUS.

I'll swap for recent KAM or KPC TNC equipment, Ameritron RCS-8V antenna switch, MFJ 6 Meter tranceiver, or a TenTec 6 meter transverter.

Terms are postal M.O. payment, I'll supply phone # and references if requested. Shipment will be via Certified Priority Mail.

Thanks and 73,
Ron Ricketts WA5VFA

Hi all!

Anybody out there know where I can get an antenna connector for a Kenwood VHF? It appears to be a 1 foot length of RG58 with an inline SO239 assembly. I know Radio Shack sells a six foot long extension cable, but I dont want to buy a six foot cable and chop off five feet. As for Kenwood Service Centers, the radio has been there twice and I'm losing faith (not to mention the parts markup)! And I've tried to make my own...the SO239 is no problem, but finding a hood for the back of the 239 to fit RG58 is like finding hen's teeth. Thanks for all the help in advance. 73's!

Steve, KE4MOB

How do you conclude that Tandy has no allegiance to amateur radio? They've offered study manuals from the beginning and have had a stable line of ham radio gear for a few years now. In my opinion I'd say that with 7000+ stores just about everywhere, Radio Shack has did much more for the amateur radio community than most people give them credit for. Thousands of folks got their first interest in ham radio from their local Radio Shack store experiences.

Don't let a few questionable salespeople make you conclude that Radio Shack, as a whole, doesn't care about amateur radio...

Hi,
CW is for HF and HF is for CW. Is it not?
I wonder what the trend is. There are lots of CW trafiic on HF bands.
Unless CW is banned(outlawed), I am on CW 99.9999999% I do have a
microphone too, tho. I can work CW all day, all night but no way with
that dang microphone. My family would try to kill me for disturbing
peace in the house, hi. CW and headphone, noone is disturbed.
CW is music to me, a form of arts, a way to meditate. Listen to a good
fist and enjoy!!!
Have a great week end, 73,
Tony, VE6CGX, Fists #3919

And you can fix older radios yourself if it broke. They are more
ruggedly built. I don't think today's radios are that much better
other than having lots of bells and whistles such as computer interfaced
control, etc.
I have both kinds and they both work equally well.

818. Motorola HT600 freq. mod?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-08 00:00:00 UTC
From: sfine@earthling.net
Message-ID: <6qgjra$ir8$1@nnrp1.dejanews.com>
Source record: 135562

I have just obtained one (rather old) discarded Motorla HT600 handi-talkie,
it has two channels and seems to work, but the transmit/receive freq seems to
be at 49.185 ch1, and 49.180 ch2. Is there an easy way to change the freq.
so that it is within one of the Ham bands? perhaps 6 meters for this one?
Any info. welcomed. Thanks Steve KB2YWP email sfine@earthling.net

I don't know about deviation, but I think that the squelch adjustment is a very small potentiometer (looks like a silver circle with two spokes to the middle) just above the shielded module on the back side of the radio (you have to remove the 7 screws first to see what I'm referring to ...)

Good Luck...

Source record: 135566

We bought the Radio Shack HTX-202 from a franchise store a couple months ago for $150... now I see that they are out in the real stores for the same price...

I've gotten to use several different hts, and I went with the Radio Shack (not because it's so big), but because it has (what I call) fast scanning capability. It will go through all 12 memory channels in just under a second. Try some other brand, and it might do 12 channels in 3-5 seconds.

Also, since it's Radio Shack, it's a little easier to get it repaired/parts, etc...

The one thing I miss on it is the outside of band rx... but if you want a scanner/ht... you might be better off getting a separate real scanner (again... the other ht's have slow scanning speeds). Besides... who really has any legitimate need to modify their radio for outside of the amateur radio bands (and I'm not ignoring CAP/MARS... it's just that 90% of the people who do modify their radios don't have a legitimate reason to transmit outside of ham frequencies).

If you do get the HTX-202... buy Radio Shack's Universal Battery charger for $50. Also buy another 6 AA NiCds for your AA pack. The Universal Charger is GREAT!!! The guy at radio shack might tell you it won't work with the ht battery, but with a very slight, yet very effective modification, it will work just fine.

The charger has two sets of contacts... one set points up, the other set points to the side... you will be using the one's that point to the side. Raise those side contacts up to the height of the positive screw on the top of the battery (top of the battery is actually facing to the side in order to make contact).

Now add some tape to the negative plate just above and below the positive contact screw on the battery. This is to keep the double-side contacts on the charger from shorting out the positive screw with the negative plate.

PRESTO! You will now have a quick charger (~1 hour) that will also condition your battery. PLUS! You can take it in the car when you go on trips with the included cigarette plug in (which will also double as a 12 Volt plug in for your radio!!!)

This is the charger that any ham interested in emergency communications should own... how will you charge your batteries when the lights are out? While the battery in your vehicle still has some juice... charge one of your battery packs.

We've got 3 HTX-202's for the family to use, and we seldom have to deal with a dead battery when we've got the quick charger. When one battery dies, switch packs (that's why I say to get NiCds for your AA pack) and charge the dead one.

If you want to find some more batteries for less money than Radio Shack... call Mr NiCad in Wisconsin...

I've included a message I sent to another fellow inquiring about battery packs (8 and 10 cell AA packs) he could get for his HTX-404

73,
Daniel
AA0NI

p.s. You may also find the antenna that comes with the radio to be inefficient... I got the Premier/Pryme Radio RD-98... It's practically a quarter wave antenna and it picks up weaker signals a lot better.

pps There are 2 other quirks I've noticed about the 202 series... The Squelch when set all the way up is VERY TIGHT... You have to have a very strong signal (nothing slightly weak.. e.g. 1 Watt at 1 mile away) in order to break through it. Also... the microphone built into the radio is also amplified more than other ht's I've used. Be sure to speak AT LEAST 6-12" away for a clear sound. You could leave it on your belt and talk into it and they'd still hear you. The disadvantage to the high amplification is in a noisy environment (car, room packed with people). You may want to consider purchasing a speaker mike, lapel mike/earphone, or ear/boom mike. These mikes aren't amplified to the same extent as the internal mike, so you won't encounter the amplification problem.

Finally... Radio Shack also has the ultimate accessory for the Ham Radio operator... for $15, you can get a fanny pack that will hold the radio snug to your body... plus there's room for your extra battery pack, spare antenna, a coax j-pole, a 12 volt 2.4 A/H battery pack (check out All Electronics... $10-$20), and a repeater directory to boot. There's a spot made just for the HTX-202 on the outside of the pouch. This is one of the best ways I've found to keep the radio secure to my side while working and still have other things conveniently with the radio.

[disclaimer... I don't work for Radio Shack... I usually have something bad too say about Radio Shack, and often wish that Radio Shack wouldn't think so highly of them selves, but it's good to see that they've finally priced their HTX-202 at it's REAL VALUE.]

Mr NiCd - E.H. Yost & Company
2211-D Parview Rd.
Middleton, WI 53562
Phone 608 831 3443
Fax 608 831 1082
e-mail ehyost@midplains.net

They take mail, phone and fax orders.
They'll accept mc/visa/discover/amex

They also have laptop, cellphone, camcorder, and battery inserts. They rebuild packs also.

This is just what I got from their ad in the Amateur Radio Trader.

73 and good luck with your battery packs...
Daniel
AA0NI

p.s. They had the 8 cell AA nicd/alkaline case on sale for $16 in July... I don't know how much it is regularly ($20-$30?). They do also have an Icom 10 AA cell pack, but it is something like $50 (It was made by Icom for the old 2/02 series... but it will fit the Radio Shack HT)

Royce:

Per the 1998-1999 edition of the ARRL Repeater Directory, the ARRL band plan for 70cm allocates all of 420.00 - 432.00 to Amateur TV use. It is highly unlikely that a local repeater coordinator would grant you a pair of frequencies in this range for a voice repeater. Also, this is why many (most?) 70cm radios will not transmit there.

> Michael Borowiec, N9EUZ

"Disallowing Tech Plus operators HF voice....." - is an example of the
"I want it all" mindset! They aren't being disallowd anything they
can't earn by applying themselves to learn something further. Learning
some more CW isn't like demonstrating the ability to perform unrelated
brain surgery. CW is related to communications. Everyone is trying to
redefine what the term "related skills" means.

Tech licensees have been successfully upgrading for years without having
HF phone priveleges. Why do you think they will stop upgrading now??
The only reason I can think of is the "dumbing down" of America's youth
by "allowing" them priveleges without teaching them how to earn them.

And....the only way that "US code requirements are out-of-line with the
rest of the world" is that we use a graduated system to establish
"incentives" to improve oneself. The "rest of the world" requires CW
for amateur licensing - now some of us are proposing to eliminate the
requirement. It seems to me that the US would then be the one who is
out of step.

The whole CW discussion is only a red herring to justify the avoidance
of applying extra effort to gain extra rewards.

Try a computer. They don't make much noise and you can send and receive didahs so fast that it sounds like a high pitched hum. No need to beat them out individually by hand. You'll be able to say a lot more with each contact in the same amount of time, too. AND they are perfectly formed didahs... :) NCI 1831

>that part would be the best?

431-433 and 435-438 are off-limits for repeaters in the FCC
regulations. The former to protect weak-signal operations near
432MHz, and the latter to protect satellite operations.

It would be legal to operate a repeater elsewhere in the segment, but
you might not be very popular. The "gentlemen's agreements" that
cover band usage set this segment aside for amateur TV. (if you're
planning on running a *TV* repeater, that would be OK, but you should
still get it coordinated) Because 420MHz ATV uses AM, one FM repeater
could cause *serious* QRM.

>Also, do most radios not recieve or transmit that part of the band without modifying it?
(my th79a doesn't)

Most FM-only radios don't transmit in that part of the band. It's
(relatively) expensive to build a power amplifier that will meet
power-output and spurious response standards across the entire 30MHz
of the band. To keep the cost of the radios down, they're designed to
cover only 10MHz. FYI, TH79's sold in Europe cover only 430-440MHz,
and won't work in the U.S. 440-450MHz band.

Some multi-mode radios (MUCH more expensive!) do cover the entire
band. However, others simply have the same coverage as the European
models - omitting 420-430 and 440-450MHz.

Steve, it is inappropriate to use a Federal licensing exam for any purpose other than to address the legitimate government concerns about granting an applicant a license to access public spectrum. Any test element must meet the test of regulatory necessity. As such, there cannot be any substitutions. Either an exam element is necessary to address a legitimate government concern or it isn't. If it isn't necessary, it has no legitimacy.

I believe that Morse testing fails to address any area of government concern. As far as I can determine, the government has not shown any concern about slow Morse operation on the air. I have never heard of a NAL issued for sending Morse too slowly. So it would seem that Morse speed isn't an issue which has a regulatory necessity of being tested.

As to your 5 points, I must ask, what regulatory concern are they designed to address? I would note that a good measure of government concern is the number of NALs issued for problems which can be correlated to inability to pass a given test element.

Time in grade may be an indicator of competence, but I suspect it is an unreliable one, as witness the number of long time amateurs who still don't understand many basic things important to proper operation. It is very easy to administer, however, requiring only a calendar.

Live demonstration of the ability to setup and operate a station may have value. It is certainly direct and to the point. It would be difficult and time consuming to administer properly, however. It is appealing in that it can directly address points of government concern. It could be particularly valuable if certain malfunctions were deliberately introduced and the applicant required to identify and correct the problems. That would directly address concerns of the government about the ability of the applicant to maintain technical compliance.

Lengthy narrative exams may also have value in demonstrating a good grasp of the things one needs to know to operate in a technically competent

way. Grading tends to be subjective, however, and very time consuming.
With a sufficiently large question pool, I think multiple choice exams can
do a good job of addressing this issue while avoiding subjective grading
and being much less time consuming to administer.

Since amateurs are no longer required to keep logs, and since many
amateurs no longer QSL, verifying a number of contacts would be
somewhat difficult. And it would be easy to generate bogus contacts.
No attempt seems to be made to determine anything except the quantity
of contacts made. It is possible to make contacts using bad procedures
and poor technical compliance. That's more at issue than sheer volume.
And how will the applicant make these contacts without having permission
to operate on the spectrum whose access he is trying to acquire?

A recomendation from 3 other hams is probably the most dubious qualifier
of all. That merely requires knowing a few hams who'll help out their buddy.

It seems to me that multiple choice written exams drawn from a sufficiently
large question pool is the best approach to addressing regulatory concerns
while still being administratively workable. I think that there is general agreement
that the current question pools are too small. We frequently hear the complaint
that they can easily be memorized. A larger pool would make that infeasible.
And a more exhaustive test could be constructed. I believe the ARRL is
addressing this in their proposal.

CW Rules! Ham Radio is a HOBBY! Not the internet, not a cell phone it is a HOBBY!

I learned CW when I was 15, sure I had to buckle down to do it. But guess what? I would not have it any other way! If things are too easy they become boring. CW is the best when conditions are rough, it always gets through. I can't express how much I enjoy it, it's relaxing. Of course I have built many CW rigs over the years as well. See Jan 85 CQ for my construction article on a little tube rig.

73 to all,

Except that parts are often no longer available. You
can also repair today's radios, and parts are still
available for them.

>They are more ruggedly built.

I don't think that's true. Old radios were certainly
larger and heavier, but I think they were quite a bit
more fragile than many of the current crop of radios.
How many of yesterday's radios would still be
operational after a 34 inch drop from the bench
onto a concrete floor? Many of today's radios can
tolerate such a drop and still continue to function
properly.

As an avid CW operator of over 30 years (95 percent of my hamming is on cw), it would seem that I would agree with you, but I don't. Just because CW is MY thing, doesn't mean it's for everyone. Being required to learn CW is like someone buying a Windows based computer and being required to learn DOS. Yes, there's an advantage to knowing it, but don't you think it should be up to the user to determine for him/herself as to whether or not it is necessary?

I think there should be seperate licenses, a license for the phone op, and a license for the CW op. If someone wants to operate both, he should be required to pass both tests. He if only wants to operate one of them, he should not be required to pass the other.

Have you considered one of the "throat mikes" that are commercially available?

Although they don't quite sound as good as other traditional mikes, you shouldn't have any "wind noise" problems with one! Their PTT switch can be clipped to your shirt.

The PREMIERE SPM-502 is specifically built for our FT-%0s and VX-1R HTs.

I don't see how Tech America is screwing the small local dealer any more than any of the other 800 number dealers are. It is the HROs, AESs, etc that have cut the throat of the local dealers. Except when liquidating a discontinued item, Tech America is generally higher priced than the other 800 number marketers who are the real killers of the local independent shop. At least Tech America doesn't try to profiteer on discontinued merchandise the way some other dealers do.

Tech America is one of the better things to come along for radio amateurs in a long time. They carry, in stock, a very large line of electronic components, enclosures, and other bits and pieces that have virtually disappeared from the retail channel (Digikey can use a little competion). I consider myself fortunate to live where one of their stores is located. When I need a part *right now*, they generally have it on the shelf. I might save a few cents (if I can meet their minimum) by calling Digikey, but then I'd have to wait for delivery of the part.

Likely is OK. The May 98 (?) QST has an article on using the Stamp (v. 2) to build a remote control system for an Icom 706MkII. A friend built it and it does work.

I would imagine there is lots of RFI potential in that setup.

Might also want to call/email parllax re this.

859. Re: Band allocations at 420-432... Repeater?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-08 00:00:00 UTC
From: Tom Gasta <tomgasta@worldnet.att.net>
Message-ID: <35CC7791.67B2EFC1@worldnet.att.net>
Source record: 135603

The 420-430 portion of the band is HEAVILY used for "repeaters" all over the southwest anyway. They are called "links", however, many of these links are stand alone repeaters on mountain tops and have 440 or other band repeaters tied together through the 420 frequencies. I am amazed that in the east they do not use these freqs for all the remote receivers and other things they do, and it is virtually unused. ATV, right!

Most commercial radios operate from 403-470 and easily cover the band, and most newer ham radios will cover the range, although many have to be "modified (CAP??)" to do so, but they work fine in the 420 to 430 range once it is done. In Southern California alone, they have special band plans for the 420-430 range and are using channel spacing less than 25Khz because they simply needed more freqs in the range. It is a great place to operate when the repeater is at a crowded two way site as well as it gets you further away from all the commercial activity at 450--470.

If you go to the trouble of getting the right radios and decide to do it, it works very well, and many of the commercial repeaters in the 406-420 range can be bought much cheaper than the 450 versions, at least outside of california.

We used the freqs in AZ much like regular 440 freqs in that we used them in pairs split at 5Mhz (easy duplexer operations) and commercial antennas can also be bought for the specific freqs.

Good luck,

Tom

Well said, Michael. One thing CW lovers never seem to understand is that we are not proposing the end of the dih-dahs. We are just saying it should not be imposed as a licensing method. A good written exam should be enough, as it is for many other things in our society a lot more important than ham radio.

866. FCC Proposal Bulletin

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-08 00:00:00 UTC
From: T E I X E I R A <teixeira@ccnet.com>
Message-ID: <35CBAB47.3662@ccnet.com>
Source record: 135646
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.policy,rec.radio.amateur.misc

QST de W1AW
ARRL Bulletin 55 ARLB055
>From ARRL Headquarters
Newington CT August 7, 1998
To all radio amateurs

SB QST ARL ARLB055
ARLB055 FCC's streamlining proposals due out soon.

The ARRL has learned that the FCC very likely will release its anxiously awaited ''streamlined'' Part 97 Amateur Service proposals sometime during the week of August 10. The document, part of the Commission's 1998 Biennial Regulatory Review, was adopted July 29, but it's undergoing some last-minute tweaking prior to public release. Editorial fine tuning like this following FCC adoption of a document is part of the normal process and not considered unusual.

Details of the FCC's license restructuring or Morse code testing proposals still are not available. The Notice of Proposed Rulemaking (NPRM) will carry WT Docket No. 98-143. It's expected that the FCC will use the NPRM to respond to some outstanding amateur rules-related petitions, including RM-9196, which proposed changes in the administration of CW tests to handicapped individuals. The ARRL will release details of the NPRM via a W1AW bulletin and on the ARRLWeb (http://www.arrl.org) as soon as the information is available. It's expected that the FCC will post the complete set of proposals on its Web site, http://www.fcc.gov.

Word is that the FCC will provide an extended period--something longer than the typical 30 days--for the amateur community to voice its comments on the proposals, and additional time also will be provided for reply comments. The ARRL released its own Amateur Radio licensing restructuring plan last month.

869. Re: Kenwood TS-570D - Is the 500 hz Filter worthwhile

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-08 00:00:00 UTC
From: Steve Ellington <n4lq@iglou.com>
Message-ID: <ExCKnL.JGo@iglou.com>
Source record: 135649

Absolutely!
The dsp does not prevent agc pumping from signals within the IF passband, 2.4khz or so. On cw, it is worthless on a crowded band. THe IF filter is NECESSARY. One big problem I had with my 570 is that the dsp cannot be dissabled. Even with the 500hz filter, you must contend with the effects of dsp which are often counterproductive during times of weak signal recption in qrn. DSP tends to blip out some of the cw it mistakes for noise. I got rid of my 570 for this reason. I discovered this after a side by side comparison with my other non-dsp rigs.

870. VOX and Heil Headset...

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-08 00:00:00 UTC
From: martyt@pobox.com
Message-ID: <35cbb47e.184480026@news.supernews.net>
Source record: 135650

I've got a Heil Proset and am having a tough time getting my rig (FT-920) set up properly for VOX operation while using the headset - seems like I can't get a good setting for the VOX anti-trip and VOX gain. Either I have to scream into the mike to trip the vox, or else it trips every time I blink my eyes.. I was hoping to be able to have hands-free operation for contesting without worrying about setting off the VOX every time I type on the keyboard but so far it's not going well...

Any hints on how to make the Heil headsets and VOX operation get along??

73,

-Marty KI0LO

Congradulations to you Cecil and too all your friends for having backup power. Excellent!!! I also have backup power (solar) and all three of my VHF repeaters are solar powered.

I would be interesting just what percentage of licensed Hams have backup power systems like you have defined?

Hi All,

I found out where Luke Electronics is or shall I say WAS... Seem they went
out of business... My next question is why? They had excellent products.
Anyone know the story on this company? They were based in Lake City,
Michigan, are the owners still around? if anyone knows the story as to what
happened, please e-mail me...

Hi Marty,

I've had no problem Icom rigs, not that I use vox much. With a Heil
set you shouldn't need any anti-vox at all; maybe that's part of your
problem? Try backing anti-vox off completely, then adjust mic
sensitivity and lastly set the vox sensitivity.

Good luck.

Regards,

For sale via auction at www.ebay.com,

Yaesu FT50-R 2m/440 HT. Works great. Picture of HT on auction page.
Cut and paste this into netscape or microsoft IE to see it...

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=24797168

OR go to www.ebay.com and search for "Yaesu"

about ebay:
if you are new to ebay, you will have to register with your real name,
phone number, and address in order to bid. This info is only given to sellers
when you win. No credit cards are used on ebay, its just a way for buyers
and sellers to meet each other. If you win, you'll have to send me a money
order and then I'll drop the radio in 2-day fedex, and its yours.

I'm cleaning out my closet as part of a job move. If your'e like me, you
have no idea what most of this stuff is really worth. I know what I paid,
but that usually tends to make me ask too much. So why not let the
buyers decide what its worth to them?

Source record: 135410

Gary:
Thanks for responding back-- all of the other anti-code people have not because they are just looking for an easier exam.

Regarding the regulatory concern of exams, my suggestions address the scarce resource of the HF spectrum. These exam alternatives, and the current code tests serve as a filter and rationing device. The gov rations lots of limited resouces--look at National Park admissions. And they have to set policy the best way to ration these resources.

The code tests have served this function well. It also allows these resources to be used by people who make the effort to show they are serious about the ARS. For these purposes, the code tests have performed extremely well (nothing is 100% perfect). The alternatives I suggested may be better than code tests, but as you noted, are difficult to administer and subjective.

My conclusion is that code tests for incentive licensing are the best method we currently have for upgrading. Also, why are we changing the system? What is the problem? New hams enter without the code. Eliminating code completely will not give us more hams. Anyone I know who wants HF has been able to upgrade relatively quickly. Those that are happy with VHF do not upgrade.

>> cellular can be restored ?????
> - Clint Bradford, KE6LCS/KAF3359

When you restore cellular, the radio thinks it's a european model and you lose automatic repeater offset. You can still set the offsets in memory, but it's an added pain. Further the cellular reception is not that much better than what it was on the image frequency before the mod. I wish I hadn't done the mod and am working up the courage to try sucking the solder off the pads.

Oh give me a break! Leaded versions of resistors and caps are readily
available and will be for years to come. Many companies (including mine)
still use auto-insertion machines for thru-hole PC boards. We have SMT also
but for some applications, like power devices, SMT creates more problems than
it solves.

I agree that its nice to have a spare rig to cannibalize but its not
required. Anyhow for the cost of even the cheapest new rig (try a FT-840 at
$900 w/o power supply) you can buy three TS-820s or two TS-530s or four HT-32
/ SX-101 combinations, all in good working and cosmetic shape. I recently
purchased two TS-820s, one working fine except for the digital display and
the other a parts radio, for $150. So parts rigs are very cost effective.

I am a microcontroller engineer so receiver design is not my strong point. But I have a TenTec Omni VI, generally acknowledged as an excellent receiver, sitting next to my $200 older gear. The Omni is definitely superior but not $2500 superior.

I was trying to point out that the original poster meant the magazine
not the term CQ.And although I believe what I said about all the lazy
code haters I did not say all no-coders are lazy or that everyone that
reads CQ VHF is lazy.I know how easy the tests are and I had to learn
about modes I'm not currently interested in(AM,packet)but I didn't try
to change the hobby to suit me.I also enjoy t-hunting and phone and
would like to see the CW requirements stay as a filter so the lazy will
move on to something more their speed . AB7RS

>Dont' laugh, but I get this great idea of starting a radio
>station!!!!(perhaps because of the many radio stations I am able to access
>through my computer and the internet)
>
>First of all, I do not have the faintest clue about this.

not to mention how to actually use a console, carts, etc right????

>Could anybody provide me with advice, comments, books, vendors, websites,
>etc.
>
>This should not be from the point of view of a corporate setup with lot of
>access to financing, but rather , a hobby, basement, volunteer type of
>thing.

well....regardless...it's gonna take more than a few hundred
bucks...not to mention a sincere commitment. broadcast quality gear,
even used is NOT cheap....not to mention a tower and a piece of land
for it...power is a consideration...this is no easy "i'm on the air"
solution now....you better be serious with this.

>I am particular interested in music, and broadcast range should be from NY
>to Caribbean(you probably guess the type of music)

maybe possible....and even possibly realistic....but more likely more
of a long term goal than initially.....depending on your backers. I
would focus more on a community oriented radio station, as you'll have
a better chance of getting a license from the FCC or DOC(in canada) as
low power stations are being licensed within the US, and apparently
canada is following suit to some degree...I would say probably under
10 watts of power.....which will save on a monthly power bill...

>I am very computer and internet literate, and would like this to be very
>computer dependent as possible.

so am I but.....

well...as far as i'm concerned....that what you want to stay away from
as much as possible for a community station....you want people not
computers....commerical radio has enough automation....with computers
running programs costing in the 1000's....though you could go the
cheap route I suppose.....if anything, at a community station....you
should have a cart deck and reel machine right along with a hard
drive...and I have yet to see any commerical station totally get rid
of their analog console....right now, it's a combo of "both the tried

and true...and some of the new" and you have to look at it that way....because if the comp crashes...and I have seen it...and have been in the middle of it at some commerical stations...you DON'T want dead air...you go to CD players.....carts, reels, whatever.....the key here is NOT TOTALLY DEPENDENT on a computer....rather foolish that way!

>Short-wave, FM, AM, etc

go for low power FM community radio...if anything!!! and you can play all kinds of different music...which is what community radio is isn't it????
>Every piece of information will be highly appreciated

well...I hate to burst your bubble, but these are realities that need to be addressed...do something different than computer automation....for anyone remembering the old days of personality radio, it's the "hands on" approach of radio.....cueing the records, shoving in the carts....all part of it......NOT sitting there and letting the computer play the tunes, liners, etc!!!

SD!

912. Cell Mod on FT50 Question

> >with removable remote faceplate, so I could mount the body of the > >radio anywhere. The truck is a 5-speed 4x4 which further limits the > >space.
> >Any suggestions?

My truck is a '97 club cab model of the Dakota. I've had success in installing an ICOM 706mkII and a Kenwood 742 in the compartment under the rear seat on the driver's side. The space is there if used wisely. Both units are mounted to the plastic lid portion of the storage compartment (on the underside of the lid). The lid makes a nice, removable "RF deck" which can be removed if necessary in just a few minutes by dropping off the antennas and control cables. With the exception of a small handfull of short 10/32 nuts and bolts, only the stock mounting parts that came with the radios were used to accomplish the installation under the rear seat. In addition to the radios, a duplexer and service loops of antenna and control cables also fit in the space nicely. Two 1" holes were drilled in the front of the compartment to ensure an exchange of air into the space. After many hours of operation, overheating has not been a problem.

The control head(s) are mounted to a short goose neck which is attached to the front of the hidaway drink holder on the front seat. The drink holder can still be used and can still retract. Speakers for the two radios are mounted on both sides next to the gooseneck. The only non stock parts here were a goose neck mount (purchased at HRO) and a small piece of wood (4"x 4"x 1/4") on which to mount the control heads.

The installation took about eight hours.

Hope this helps.

Mike Obermeier, KD6SNE

I've built a bit-regenerating repeater controller around a BSII - it is constantly working around 50 watts on VHF. As long as you have a good +5VDC power supply you should be set. (A good supply being a 7805, a 10uf cap, and a .1uf cap... =)

The need to note that the Stamps do NOT have a real time clock builtin. If you just need something to satisfy FCC regs, then use a counter and get it somewhere near 10 minutes.

Have fun,

That's about the going price.

I know someone who got a large number of brand new Motorola radios at an
auction of a security firm for about 10 cents on the dollar, and the
original
invoice price was about two thirds of list price anyway.

The only way that I know how to get the Extended receive out of there is to
do a microprocessor reset, or, if you have the software take the little
check mark out of the box and send the data to the radio.

You guys might as well boycott ICOM as well.

I guess CQ and QST never heard of the ICOM AH-100. This antenna handles 150 watts and loads from 1.6 to 30MHz (probably higher) with less than 2:1 SWR. It is a dipole configuration, using stainless steel cable. It can be used as a vertical or sloping vertical when one side is grounded. Of course, it is aimed at the marine market, where lotsa salt water tends to "improve" the signal.

I'm happy with mine. No $500 auto-tuners for me.

The VX-1R can do DTMF(touchtones). It's not the most convient interface, but
you also don't have to make room for a DTMF keypad.

I bought one today. It looks pretty nice....

938. IC706MkII Disable 50MHz

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-09 00:00:00 UTC
From: martinsole@my-dejanews.com
Message-ID: <6qj1m1$ra0$1@nnrp1.dejanews.com>
Source record: 135505

Hi to all,

I have recently purchased an IC706MkII. As I am now stationed in Thailand I wish to import this radio for use here. All radio equipment coming into Thailand has to be physically inspected and checked by the local PTT authority.

50MHz is not allocated in Thailand and radios which have transmit capabilities on 50MHz will not be granted an import permit unless it can be shown that Tx in this frequency range has been disabled.

Can anybody advise me if it is possible to disable 50MHz transmit either alone or in conjunction with other bands. I did see a question from somebody in Indonesia who wanted to access 50 and 144 on an IC706 that was locked so I think it might be possible.

Smuggling the radio into country is not an option, fines exceed several thousand US$ and jail is usuallly an immediate reaction until the matter is sorted out.

Any help to my e-mail address, martinsole@compuserve.com greatly appreciated.

Source record: 135506
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Bob:

I've used PIC chips (not the Stamp, but the 16C55) without any problem when
subjected to 10+ watts on UHF (441.XXX) and 50 watts at 2 meters. No special
precautions were taken and the enclosure for the unit isn't even RF tight.
In my application, the PIC unit (which serves as a controller) sits directly
on top of the UHF RF deck and directly next to the 2Meter radio.

Hope this helps relieve your issue to some extent.

941. FS: Unusual Collector's Item

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-09 00:00:00 UTC
From: n7lxo@olympus.net
Message-ID: <35cd24e2.46313528@news.olympus.net>
Source record: 135508

I have an ITT Mackay Marine Portable Lifeboat Transceiver Type 401-A
that needs a new home.

It is a rugged, compact, entirely self-contained radiotelegraph
transmitter-receiver designed primarily for use on survival craft
(read LIFEBOATS) to promote safety of personnel at sea. As built,
this equipment provides for communication on the 500kc distress
frequency and on the long range 8346kc channel between survival craft
and between such craft and rescue vessels or aircraft.

All power required for operation of this radio equipment is provided
by a built-in, hand-cranked (in the organ grinder tradition) electric
generator.

Unit is waterproof and is built to float after a 20' drop into the
sea.

Power from the two cranking handles is applied to an integrated
electric generator through a "silent" chain ball-bearing drive with a
72:1 angular speed step-up ratio. Original lubrication normally
suffices for the lifetime of the equipment.

RF power losses are minimized in the power amp and output networks by
use of silver-plated hardware, teflon antenna feed-through insulator,
and high Q variometer wound on a low-loss glass-fibre malamine form.

....
NOTE: Needless to say, this equipment must not be utilized such that
it automatically broadcasts false auto-alarm or SOS signals. That
would constitute a Federal crime with substantial penalties. The unit
would have to be modified for other use, limited only by your
imagination and inventiveness. Say...

Field day (they should make a special class for such projects)???
....

The Type 401-A package includes the following items:
a. 401-A transmitter-receiver in canvas cover (the cover is beginning
to show its age after a career at sea). The case has a removeable
cover that protects the control knobs, connection posts, headset and
keyer.
b. Two generator cranking handles stowed within pockets in the cover.
c. A four-section collapsible mast with antenna wire and rigging
stowed within a separate, but attached, pocket of the cover.
d. A braided ground strap wound on a spool; one end of wire is
secured to the panel while the spool is kept within the case cover.
This spool would normally be dropped over the side of a lifeboat but

of course can be connected to any suitable ground.
e. Headphones housed within cover of case, with end of cord permanently secured to the equipment.
f. Spare parts, including the following tubes: 12AT7, 6AQ5, 6U8, 6BJ6, and neon lamp NE51.
g. ORIGINAL OPERATING AND MAINTENANCE MANUAL, which contains:
1. Full description.
2. Electrical circuit descriptions.
3. Operating instructions.
4. Maintenance.
5. Electrical parts list.
6. Illustrations/drawings, including 4 tables & 10 drawings.
h. Wall mounting bracket to wall mount the entire tranciever in its case and cover, as well as provide compartments to stow the spare parts and manual.

This complete package will weigh about 63 pounds when packed so UPS shipping costs could be as high as about $40 depending on your location. Check with UPS to determine your cost for shipping.

PRICE!
I don't know how to price this item so will entertain all offers received before:

MIDNIGHT (PDT), 25 August 1998.

Any offers tendered should SPECIFY YOUR BID PRICE, and INDICATE WILLINGNESS TO PAY CRATING AND SHIPPING COSTS if you are not close enough to facilitate local area pickup of the unit. I will locate a packer/shipper and provide you with their phone number so such costs can be verified to your satisfaction. This should preclude any misunderstandings.

THE BID PRICE WILL BE GOVERNING, but I reserve the right to offer the unit to the next lower bidder, etc., if packing and shipping costs, or other arrangements for transferring the unit to the highest bidder cannot be agreed upon.

Hope this once in a lifetime acquisition will make someone the talk of their local club.

I have an IFR FM/AM1000 (not A or S or anything). Missing Battery box.
I'm having trouble visualizing how the battery box goes together.
There's a depression in the back that would be a good place to put a
battery,
but there are two giant bolts right in the center of the depression.
Couldn't put a Gel-Cell in there without drilling two holes in it.
Could someone please describe the battery assembly?
Thanks, miker

Source record: 135526

Hi, I have a 2000L for sale, has been changed to meet Eimac specs for 8877, amp is in great shape and has 160 meters, will easily put out 1500 watts, much better than ANY 3-500Z amp for the same price. I ship for $1200.00 (least exspensive 8877 you'll find) If interested please e-mail direct. Thanks 73 LOU

960. Still for Sale

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-09 00:00:00 UTC
From: John Watson <jwatson@mail.cde.com>
Message-ID: <35CD5568.4BBDED7F@mail.cde.com>
Source record: 135527

1. Yaesu FT-990, AC/DC, with automatic tuner. version 1.3 firmware. 2.0 khz ssb filter, and 500hz CW filter. Hand Mic, and owners manual. I am the original, and only owner, and this radio is in MINT condition. Asking $1300.00 shipped insured lower 48 only.

2. Kantronics Kam with the enhancement board, making it a Kam Plus. It has the 8.0 chip in it, and does all the digital modes including pactor,

and g-tor. I have the manuals, and cables and the boxes. Asking $200.00

3. Kenwood TR-7950 2 meter FM 50 watts output. was used with the kam for

VHF packet.
The radio has 16 memories, and is a 7 on a 10 scale cosmetically. I have

the mic and cord.
I am asking $175.00

These items are used regularly and all work as they are supposed to. As I am updating some the shack, these items are "extra" to my needs.

If interested, reply to my e-mail address.

Source record: 135528

Correction to my post last night. It has a 14mhz IF NOT 28mhz IF like I originally posted. Below is correct.

I just bought a HF/6m rig today so I need to sell my 6 month old TenTec Model 1208 xverter. It is factory wired (14mhz if) in New Condition (not a scratch on it) w/manual. 10 watts in puts out 8 watts on 6m.
I paid $165.00 for it will sell for $105.00 plus $5.00 shipping lower 48 upon receipt of money order.

>why should they have those frequency privileges?"

I suppose 50.0-50.1 and 144.0-144.1 MHz might have their status as AIA
subbands revised, but that has nothing to do with HF operations does it?
There are no other "CW subbands" in Part 97. On HF, we have only data
subbands and voice/image subbands. There are no CW subbands listed
in Part 97 for HF because the entire bands are available for CW. Traditionally,
amateurs operating CW have hung out in the data subbands, but that's not
a requirement.

IMHO we need to take a look at refarming the amateur bands in a more
intelligent fashion. I think the idea of by mode subbands is an obsolete
concept. With the filtering options we have available today, we can
support intermodal operation in the same spectral segments. The only
segregation we might want to consider is to set aside a weak signal
segment for QRP on each band.

>>The VX-1R can do DTMF(touchtones). It's not the most convient interface, but
>>you also don't have to make room for a DTMF keypad.

I must be spoiled with the ADMS-1 v1.04 software...because hitting my
often-used DTMF sequence is as easy as keying up, and hitting the center
DW/BAND/SET button. The LCD display even shows the numbers being sent at they
are transmitted.

BTW, if you have a pre-v1.04 version of ADMS-1 software, you can upgrade to
v1.04 free of charge by visiting RT Systems' site at

http://www.rtsars.com/

And please make sure you read the new thread, "VX-1R Belt Clip!" that I just
posted!

975. VX-1R Belt Clip

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-09 00:00:00 UTC
From: clintbrad4d@earthlink.net
Message-ID: <6qkfrbifr1@nnrp1.dejanews.com>
Source record: 135542

Bob Dashoff, KN6GA, knows and loves his Yaesu VX-1R mini HT. And this respect for Yaesu'e unit shows throughout his VX-1R Belt Clip Replacement kit!

Yaesu's stock belt clip for the VX-1R is not one of the best clips made. It just does not feel "secure" enough.

Bob saw that minor shortcoming, and went to work. What he has done is modified a Motorola belt clip to fit our VX-1Rs PERFECTLY.

A picture of one is at...

http://www.icongrp.com/~sllewd/beltclp.htm

Or email Bob and he'll email you a picture or two.

I got mine last Friday. At first, I thought I was going to be disappointed when I saw that it was a permanently-mounted configuration. I mean, there I was with a less-than-24-hour-old new HT that was super tiny, and here I go adding to its "bulk." <g> I also thought it might make my leather case worthless - by not fitting properly after installation.

I was wrong on both counts! The case fits fine, and the clip itself looks and feels great. It is a great product that EVERY VX-1R owner should have.

- Clint Bradford, KE6LCS

>Parts are still available, but may be in different packages. IE plastic
>or ceramiccapacitors vice paper ones. Film resistors vice carbon.
>Patience can even dredge up the older tubes. Check .boatanchors.

But other than for resistors and capacitors (and leaded versions of
those are becoming increasingly rare as all new production shifts
to SMD), you have to play cannibal to obtain obsolete parts no longer
in production and only becoming rarer. For some mechanical parts,
and often for transformers, only cannibalizing identical radios will suffice.
That's generally a small, and dwindling, source of replacement parts. It
may take you months, if you're lucky, to locate a particular part to repair
an older radio. That isn't what you want in your main, or only, radio. You
need to be able to get it back in operation rapidly.

(Even early generation solid state equipment is suffering from a
parts availability problem. This isn't just a boatanchor problem.
Any piece of equipment which has been out of production for 10
years or more probably contains parts that are no longer available
except by cannibalization of other radios of the same or similar
model.)

>unless covered with rugs or other padding. My TS-520
>kept working after a two foot drop to a padded rug covered
>floor.

34 inches is the more or less standard operating desk or workbench height. The most common drop is when a rig is dragged off the table by a snagged cord, or is dropped when being moved to or from the work area.

The low mass of today's SMD parts means that they can tolerate much higher G forces than the higher mass components of older rigs. And it should be obvious that tubes are more fragile than transistors or ICs when dropped. Drop a transistor or IC and you just have to bend over to pick it up. Drop a tube, and you usually have to get out the dust pan and broom.

And it isn't just mechanical ruggedness where modern rigs have the advantage. Almost all modern equipment has protective shutdown or foldback or crowbar circuitry to keep it from being damaged by improper loads or improper voltages. Older equipment generally did not. Tube equipment could generally tolerate a good bit of abuse, but modern equipment can generally tolerate even more by actively protecting itself from the abuse. For example, you can operate an IC735 key down into an open or short circuit for hours on end with no damage. Don't try that with a TR4C or TS830. (Early solid state equipment was often even more delicate.)

But lets put matters of reliability aside for a moment and look at operational performance. Most of the radios made in the last 10 years have much more robust receivers than earlier rigs. The third order intercept is much higher on average today than it was in the past. And often the selectivity is better too. There has been a large push by the manufacturers to improve performance in this area, and it has paid off handsomely.

I'm willing to brush aside things like general coverage receive, multiple memories, and other bells and whistles not germane to amateur operation. But good receiver performance is a must, and good clean transmit is a must. Both are generally better today. (Of course you have to compare like with like, IE yesterday's bottom end against today's bottom end, yesterday's top end against today's top end, etc.)

IMHO, I'd order rigs this way:

1) Rigs less than 10 years old.
2) Rigs more than 25 years old.
3) Rigs in between.

In other words, the early generation solid state rigs were generally worse than the rigs that came before them or followed them in terms of performance, and also in terms of ability to tolerate abuse.

They do now sell a Baygen lantern, however. That contains the windup
generator, a sealed lead acid battery, and a light bulb. Seems like just
the ticket to me.

There are a number of "country code" jumpers in the radio. Off hand I don't know which one(s) may disable 50 MHz. Sounds like a question for Icom tech support. You could also physically disable the 50 MHz band filter by lifting a component.

Please look at: http://www.rnw.nl/realradio/rx_testing.html

It gives me the impression that "State of the art preformance"
has been around for so long on HF, that true RX improvements
are the result of "fluctuating (?)" sets of standards.

(70% AM modulation for S/N !!! Geez my old URM 25's are
"Wheezin'" to crank out 30..)

I recall seeing such articles, but I don't recall where or when. It isn't
rocket science, however. All you need is a voltage comparator with
its trip set at 10.5 volts driving a cut out relay.

> of resistive loading. Perhaps CQ was merely ahead of its time. :-)

Actually, QST has run ads for antennas with resistive loading for at least the past years (B&W comes to mind.) QST would willingly accept an advertisement for that "magic antenna matcher" if the manufacturer were to advertise it for what it is. There is a big difference between a manufacturer who advertises and antenna by showing the resistor that is used to make it more broadband (albeit more lossy) and a manufacturer who advertises a group of high-power resistors as an "automatic antenna matching circuit." In the former case, hams are aware of what they are getting; in the latter case, many will be misled.

IMHO, in the context of what hams consider to be an antenna tuner, resistors do not a matching circuit make.

990. FT920 AM filter: INRAD vs. Yaesu?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-10 00:00:00 UTC
From: cdorn@gpu.srv.ualberta.ca
Message-ID: <6qnckf$p0c$1@pulp.ucs.ualberta.ca>
Source record: 135307

Hello,
This is probably a trivial concern for most 920 users, but I was wondering if anyone has had the chance to compare the Yaesu AM filter to the INRAD replacement? I understand that the INRAD has steeper filter slopes, but I am wondering if the difference is that great? Which filter provides better fidelity with decent rejection? The Yaesu filter is much easier to get up here, but if the INRAD is really that much better, I would like to know.

Many thanks,
Chris VE6RDC

991. Re: Hobby-Starting a radio station

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-10 00:00:00 UTC

Well, let's see here - if you want to start a "real" radio station,
you know, the kind that transmits to radio receivers then you need
to talk to the FCC regarding their policies - if you want low power,
then Part 15 is all you need to concern yourself with (100 mW, your
antenna under 1 meter long). If youwant anything larger, say,
500 Watts and up, then you will need to get with a communications
consultant/lawyer and start the process...

If you want to start an Internet radio station, one that broadcasts
packets across the internet to other computers, then what you will
probably want is a recent copy of Red Hat Linux (which includes a
copy of RealAudio Server software) and then work on getting a good,
high-speed internet connection and a permanent IP address.

Please clarify which you want to establish, neither are cheap.

If you want to set up a pirate radio station, i.e. one that is
not licensed, then youshould checkpout rec.radio.pirate (I think
that is what the group is called).

Good luck,

Ken

thanks, JJ, for the incredible (and interesting) detail. maybe it was _not_
my imagination (seeing grounding wires bonded to gas pipe) after all.

i can see, however, my idea proabably was not "code", unless i also tied
the bond to the water pipe or a ground rod, in which case i would probably
just forget the gas pipe.

since posting and reading this thread i begin to wonder if the "spark
arresters" are needed. with the control/power wiring for the polar
rotator and actuator connected, what use do they serve? i would think
any close strikes are going to fry everything. i am going to install
them, anyway, but maybe they make more sense on the little fixed
dishes. or is there something that i should be installing to protect
the other circuits?

regards,

loren

Common misnomer: if it's on the internet alone, it's by definition, NOT a
RADIO station, as the signal does not travel over radio waves as its primary
path of travel.

Good luck!

I can't help but think that when people commonly get Ham tickets in the name
of expediency instead of through a genuine interest in the hobby, then
Amateur Radio is being treated like CB.

That can't be very good for Amateur Radio.

[cross-posted to a couple of other groups interested in old Heathkit kit..]

I would really want to get one of the late-'70s TV kits now, and build it
from bottom up. The best I have been able to do lately is find ones at ham
fests and overhaul it.

The only company I know still doing kits is Jameco electronics, and they
only have the small simple projects. I still take pride in my old Heathkit
hi-fi receiver (100watts a side, still excellent), metronome (my first kit),
and still have my old H8 computer with its H19 terminal, and my old H151
XT-compatible. But I miss my weather station (practically gave it to a
radio station I was once an engineer at), magnetic-cartidge RIAA preamp,
and the matching pair of indoor/outdoor themometer and an alarm clock (the
clock was modified with another kit to receive the NIST time-clock signal
and keep within 0.01 seconds, and sent out a serial pulse sequence that

synchronized other alarm-clocks of the same model that acts as slave units)
-- these all got sold to support my education.

I just picked up an old 1960's vintage mic-preamp and phone-patch unit that
I am going to fix up (all tubes) at a local ham-fest. You can still find
goodies at ham-fests; the best ham-fest, IMHO, is the Dayton (OH) HamVention.

Kenwood Station For Sale:

TS-520SE 160-10 Meter HF transceiver in really nice condition, works great with full output on all bands. Inside looks like a new one (never owned by a smoker). Has CW filter installed. With owners manual and spare set of tubes. Can arrange on-air schedule if you want to hear it.

VFO-520S external VFO, matches 520SE works great in very good condition with cable.

Yaesu YD-148 desk mike, dual impedance and wired for the 520SE and in super shape.

MFJ 300 watt dry dummy load works fine.

All for $400 plus shipping. Will not seperate.
Selling to buy tickets for Six Flags Ky. for kids

E-mail me if interested crslex@iglou.com

Message-ID: <35CF3BBE.782EB2BD@mail.cde.com>
Source record: 135331

1. Yaesu FT-990, AC/DC, with automatic tuner. version 1.3 firmware. 2.0 khz ssb filter, and 500hz CW filter. Hand Mic, and owners manual. I am the original, and only owner, and this radio is in MINT condition. Asking $1300.00 shipped insured lower 48 only.

2. Kenwood TR-7950 2 meter FM 50 watts output. was used with the kam for

VHF packet.
The radio has 16 memories, and is a 7 on a 10 scale cosmetically. I have

the mic and cord.
I am asking $150.00

These items are used regularly and all work as they are supposed to. As I am updating some the shack, these items are "extra" to my needs.

If interested, reply to my e-mail address.

Source record: 135334
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Icom IC-2100H 2 Meter rig w/ extended receive. Like new, never mobil, with all original docs and packaging $220 plus shipping.

SOLD Icom IC-207H Dual Band (144/440) never used mobil, with all original accessories and box. Mint condition. $300 plus shipping.

Yaesu FT-8100R deluxe dual bander, mint, with all original docs and packaging. A super nice rig, I've used it for base operation only, has never been mobil. This is a bargain at $420 plus shipping.

The rigs listed above have been used only slightly, and are in true mint, as new condition. They are all less than 4 month old. If you are in the market for extremely nice equipment, then here it is. As proof of this, I offer 5 day return privelege on the above items only.

SOLD M2 SQloop loop antenna for 6 meters, excellent condition. Has been used in my attic, never outside. This provides excellent performance during 6 meter openings, and I've work coast to coast using 50 watts on this antenna. Includes original docs. $90 shipped CONUS

SOLD M2 SQloop loop antenna for 2 meters. This is the 'little brother' to the 6 meter version, and works great for 2 meter SSB contacts. Never used outside, but only in my attic. $40 Shipped CONUS

Motorola VHF power amplifier - 4 in/50+ out. This is an item I bought to use with the packet radio mentioned below, to boost its output to a more usable level. I haven't used it much, but it is clean and works fine. Tests using my wattmeter indicate 5 watts drive give over 70 watts out, 1/2 watt in gives 12 watts out. It was manufactured for 150-174 Mhz, but has been 'tweaked' down for 144-148 Mhz. About the size & weight of a typical brick amplifier, and uses 13.8 VDC. Input & output are SO-239 connectors. A bargain at $65 shipped CONUS

MFJ-8621 Packet Tranceiver, bought new for use as a dedicated EMWIN receiver. This was purchased as an experiment. I wanted to re-crystal for 150.435 and use it to capture EMWIN local feed. As it turned out, the wideband nature of the front end of this rig wasn't selective enough. But it works fine as a packet rig on it's stock freq of 145.01. So rather than fiddle with it any more I'm selling it, and will toss in the EMWIN crystal as well. Unit is in mint condition, working perfectly, with original docs and box, also including the extra crystal for those in a less rf-congested area. $90 shipped CONUS.

MFJ-1026 Signal Enhancing Noise Filter. Used briefly and then I fixed my noise problem so it's surplus. $90 shipped CONUS.

MFJ-956 Antenna Preselector, 150 Khz - 30 Mhz
I used this on my old general coverage receiver and retired it when I got my R8B. Tunes longwire or any coaxial antenna for RECEIVE only. It is a passive preselector, so it doesn't require any power. This is not meant for transmitter tuning. In mint condition with all original packaging, a steal at $25 shipped CONUS.

Diamond SX-200 SWR Bridge, in as-new condition with original docs and box. Bought an MFJ-259B (great piece of gear!) right after I bought this, and never used it. $75 shipped CONUS.

Terms are postal M.O. payment, I'll supply phone # and references if requested. Shipment will be via Certified Priority Mail.

Thanks and 73,
Ron Ricketts WA5VFA

Yep -- I'll agree that the earlier all solid-state rigs were tempramental when it

came to electrical abuse. I know more than one ham who was replacing
final transistors because of faulty loads. That's one of the reasons I have
stayed with tube finals for so long (with the exception of an Argonaut 509
that I still kick myself for trading away).

Receiver capabilities have improved, but it doesn't neccesarily mean that
manufacturers are using them. My TS-520 receives better than an IC-706
in the near neighborhood, but my DX-70T receives better than either of
them.

The biggest problem I see with the newer electronics is that it often doesn't
pay to homebrew any more. Although there are always the bragging rights,
the cost of the materials to build a rig is just as high as buying one. I'm not
trying to commercialize the joy of rolling your own, but it used to be cheaper
as well as fun and gratifying to build your own rigs.

I will stand right with you as far as the uneccesary bells & whistles. I wish
the vendors would build some decent basic radios and let the ham choose
the extras he or she wants to pay for. I'll probably never use most of the
gadjets on the DX-70, but it was less complicated for mobile than an IC-
706 and less money than a TS-50.

TOny -- KF3BX.

I like mine. Own the VX-1R and the Std C508, and I prefer the Q7A.

> I am looking at it more for the
> scanning functions. Can the receive modes be selected i.e. NFM / WFM
> independent of frequency?

I've not tried it on all bands. It will receive WBFM where you would
normally find it.

> Also, I was wondering what type of antenna
> connector it uses, and is there an adapter available to convert to BNC?

SMA. Adapters to BNC are fairly easy to find
> Thanks.....DE. N0HPQ.

It could be coming from a variety of sources, but it seems that it is being picked up by the antenna. Examples: Rear window defroster wires; rear window wiper. Try grounding the hood to the body with flexible wire or braid in 4-6 places, so the hood is *really* gronded. Ground the muffler to the body. Often a big-time offender is the fuel pump .. which may be in the tank! Seems I read that Ford has a factory fix for that.

Good thing to do is use toroids on power and control leads, and even on antenna coax. Likely can buy the snap-on type at RS or order some from MFJ. They can make a big difference.

Hi

Have a couple of questions on this on. Seems like there is software to program it and it requires some special cable not at the dealer I checked. No mention of any of this in the Manuel. Does anyone have a schematic of the cable or have built a cable? Does it use the data port or microphone jack? Does it need level conversion (rs232 to ttl) ?

The other question, is it possible to remote control the unit via dtmf? A ad in QST hints at this but can find no information in the manual.

Thanks Ted VE3ONJ

Yes, yes, yes. You had to answer 1 question about mode that I am interested
in, and 2 questions about modes that neither of us are interested in. I had
to demonstrate a -proficiency- in a single mode that you are interested in,
but I have no interest in using.

So whats your point?

If you don't like a democracy, I can suggest several QTH's with lotsa
government and some QTH's with very little or no government. Personally, I
vote for things I agree with.

1036. Icom & Yaesu Tranceivers + Accessories

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-10 00:00:00 UTC
From: rrickets@ix.netcom.com
Message-ID: <35d13ce4.126665280@nntp.ix.netcom.com>
Source record: 135358
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Icom IC-2100H 2 Meter rig w/ extended receive. Like new, never mobil, with all original docs and packaging $220 plus shipping.

Icom IC-207H Dual Band (144/440) never used mobil, with all original accessories and box. Mint condition. $300 plus shipping.

Yaesu FT-8100R deluxe dual bander, mint, with all original docs and packaging. A super nice rig, I've used it for base operation only, has never been mobil. This is a bargain at $420 plus shipping.

The rigs listed above have been used only slightly, and are in true mint, as new condition. They are all less than 4 month old. If you are in the market for extremely nice equipment, then here it is. As proof of this, I offer 5 day return privelege on the above items only.

M2 SQloop loop antenna for 6 meters, excellent condition. Has been used in my attic, never outside. This provides excellent performance during 6 meter openings, and I've work coast to coast using 50 watts on this antenna. Includes original docs. $90 shippend CONUS

M2 SQloop loop antenna for 2 meters. This is the 'little brother' to the 6 meter version, and works great for 2 meter SSB contacts. Never used outside, but only in my attic. $40 Shipped CONUS

Motorola VHF power amplifier - 4 in/50+ out. This is an item I bought to use with the packet radio mentioned below, to boost its output to a more usable level. I haven't used it much, but it is clean and works fine. Tests using my wattmeter indicate 5 watts drive give over 70 watts out, 1/2 watt in gives 12 watts out. It was manufactured for 150-174 Mhz, but has been 'tweaked' down for 144-148 Mhz. About the size & weight of a typical brick amplifier, and uses 13.8 VDC. Input & output are SO-239 connectors. A bargain at $65 shipped CONUS

MFJ-8621 Packet Tranceiver, bought new for use as a dedicated EMWIN receiver. This was purchased as an experiment. I wanted to re-crystal for 150.435 and use it to capture EMWIN local feed. As it turned out, the wideband nature of the front end of this rig wasn't selective enough. But it works fine as a packet rig on it's stock freq of 145.01. So rather than fiddle with it any more I'm selling it, and will toss in the EMWIN crystal as well. Unit is in mint condition, working perfectly, with original docs and box, also including the extra crystal for those in a less rf-congested area. $80 shipped CONUS.

MFJ-1026 Signal Enhancing Noise Filter. Used briefly and then I fixed my noise problem so it's surplus. $85 shipped CONUS.

MFJ-956 Antenna Preselector, 150 Khz - 30 Mhz
I used this on my old general coverage receiver and retired it when I got my R8B. Tunes longwire on any coaxial antenna for RECEIVE only. It is a passive preselector, so it doesn't require any power. This is not meant for transmitter tuning. In mint condition with all original packaging, a steal at $25 shipped CONUS.

Diamond SX-200 SWR Bridge, in as-new condition with original docs and box. Bought an MFJ-259B (great piece of gear!) right after I bought this, and never used it. $70 shipped CONUS.

Terms are postal M.O. payment, I'll supply phone # and references if requested. Shipment will be via Certified Priority Mail.

Thanks and 73,
Ron Ricketts WA5VFA

Get a cord that has the correct plug on it. Get a small gel cell, 12V, 3 to 7 AHr. Make the connection with molex, cig jack, etc. Charge the gell cell with a small wall wart that gives 14V and 500+- mA. You can pick these up used for a few dollars. I have mine rigged to charge in the car, and can power a lot of items with molex connectors. Do this even if you get a power supply, for emergency power.

Hi,

I was cleaning an old key I got at a ham-fest about 30 yrs ago,
and I finally found some writing.

It says:

W U TEL. CO.
LEGLESS KEY
2 A

I take this to be western union telegraph company
(this may be a reach). The parts that appear to be plastic
are actually not plastic, but made of some water soluble
black solid material. This would seem to date it as pre-plastic.

Any ideas ?

Hello.
I need one of two things:
I have the new model FT-50RHD, with the new firmware package that does not allow cell-mods.
I either need a mod for this new radio,or
if someone is selling an FT-50 that either has, or is able (IE, purchased at the end of 97), Please let me know ASAP.
I REALLY need a radio that will do it (Not the cell. mod, but the TX below 400) - for work.
Thanks
Mike

For Sale--IC micro 2at HT with drop in charger. It needs new battery and the dup/simplex switch is not working properly. I have a new switch for it but I haven't installed it. The radio has wide band tx capability. Also, have a wall charger for it. It does have CTCSS encode via dipswitch settings. $50.00 plus shipping. Contact Dean Walker, KB4KVS

I have a MINT IC-706 MK-I with manual, box, mic, and seperation cable. Also included is a Outbacker Perth Plus mobile HF+6+2m antenna. I am getting out of mobile operating.

I am looking for a straight up swap for either of the following.

Yaesu FT-990 AC/DC
FT-890 AT with PS(I traded mine for the 706)

Kenwood TS-850 SAT
TS-450 SAT

Or whatever you've got, but I would like an auto tuner in the rig.

I have used the DX-77 for several months and love it. I get great sig reports and the recvr is terrific. It is very simple to operate, no xmt tuning, just set the freq and talk. I think it is the best rig ever for the money.
During the last DX contest, I worked 55 countries in 60 minutes barefoot with a Hygain TH7DXX at abt 70'.

> "Disallowing Tech Plus operators HF voice....." - is an example of the
> "I want it all" mindset! They aren't being disallowd anything they
> can't earn by applying themselves to learn something further.

Don't give them EVERYTHING! There are LOTS of options, but what is key is the ability to CONVERSE on phone with hams of all license classes around the world. Give them a CHANCE to get bitten by the DX phone bug, and dangle more bandwidth and power in front of them, and they WILL upgrade. Right now, Tech Pluses are CUT OFF from HF phone below 28Mhz, and this is NOT a good way to entice or facilitate encouragement.

It's the seperate Advanced and Extra class I think ought to be eliminated. For instance, I would have proposed something like this:

CLASS Frequency Allocations Exam Elements Required
----- --------------------- ----------------------
A All frequencies 1C, 4A + some 4B
B General & Advanced 1B, 3B + some 4A
C General, limited to 100w out 1A, 2, 3A + some 3B
D No code Tech & Tech+ 10m phone 2, 3A

Extras become Class A, Advanced become Class B, Generals become Class C (with power over 100 watts grandfathered for existing licensees), and everyone else becomes Class D. You must pass the revised written elements to get the next higher class of license. Noone but the very few Extras lose ANYTHING, and they only lose exclusive use of very small sub-bands!

o This makes the "advanced" class A truly something special without reserving HUGE portions of bands for only a few.

o It gives Generals access to the large Advanced sub-bands in exchange for a harder written exam.

o It gives Tech Pluses power-limited access to General HF phone & CW bands in exchange for a harder written exam.

o It gives no-code Techs access to 10m phone in exchange for some HF questions. (or maybe not depending on International agreements).

Sure, this isn't perfect, but the details can be worked out. I'd like to see EVERY class of Amateur licensee able to have the thrill of HF phone DX contacts, sampling the full range of operating experiences.

> Tech licensees have been successfully upgrading for years without having
> HF phone priveleges. Why do you think they will stop upgrading now??
>
Read QST... They are NOT upgrading in sufficient numbers to keep this
hobby healthy. I'm not talking about "dumbing down". I'm talking about
giving someone who demonstrated 5WPM CW proficiency some HF phone beyond
the token privileges on the sporadic 10m band. What is the BIG DEAL!

> And....the only way that "US code requirements are out-of-line with the
> rest of the world" is that we use a graduated system to establish
> "incentives" to improve oneself. The "rest of the world" requires CW
> for amateur licensing - now some of us are proposing to eliminate the
> requirement. It seems to me that the US would then be the one who is
> out of step.
>
I wasn't suggesting the elimination of the code. It DOES serve a purpose.
However, I am arguing that the current license structure is flawed because
it isolates an entire group of hams in the VHF/UHF portion of the spectrum
just because they don't want to use CW. Why make people become proficient
at the difficult 13WPM level just to use HF phone? This is a hurdle for
the sake of a "weeding-out" factor that is totally unnecessary. There will
NOT be a huge influx of CB operators if you retain the 5 WPM requirement.
If there is a huge influx, it will be made up of people with a genuine
desire to progress in radio.

> The whole CW discussion is only a red herring to justify the avoidance
> of applying extra effort to gain extra rewards.
>
Baloney! I worked hard for my General, and I don't like the idea of
giving a General ticket to Novice and Tech Plus operators who haven't
demonstrated knowlege by passing General written elements. I am suggesting
that we ought to open the HF phone "door" to tens of thousands of dis-
enfranchised Tech Pluses out there. Give them a taste of what they are
missing, thereby creating incentive instead of RESENTMENT.

Current comment on the ARRL proposal is running 2 to 1 in favor of...
If we don't make alternative suggestions that make sense, you might
not like the alternative.

Regards,
- Mike, N9EUZ

> Anyone doing anything creative <g> with the lithium-ion cell for the Yaesu VX-1R as far as charging goes?

Charge control is built into the battery pack. Any 6V DC / 600mA max source will properly charge your battery.
Watch out: Without current limiting, the battery pack is likely to be destroyed!

What you want to do requires FCC licensing, and the cost of such licensing is of corporate proportions. Secondly, even legal, unlicensed FM stations have a limit way under 1 watt, so your coverage might be a couple of hundred feet away from your house on a good day, and even that might be beyond the range limit for low power FM stations. The fines for non-compliance are very heavy.

Even if you get a cheap transmitter, and a simple antenna, and some simple mixing equipment, it could end up costing you big time anyway.

I have the follwoing Heath items for sale:

SB-610 monitor scope. Working order, but not all parts are original.
Horizontal gain control has been replaced, and has no knob.
Sweep freq knob and tone gen knob are missing the chrome colored ring.
Cabinet is fine -- a bit dirty, but no dings. No feet.
CRT and HV caps seem good, as it is working fine. No manual. $ 70

IB-1101 freq counter. Works great, looks great. As far as I can tell,
everything is original. Manual is included. $ 65

GC-1107 digital clock. Works great, looks great. Everything appears
original. $ 25

I have the following Heath manuals available. All are in good condition.

IO-103 Five inch scope $ 12

GR-2000 TV Set $ 12
GR-2050 TV Set - Five book set $ 30
GRA-2000-1 TV Clock $ 3
GRA-6001 TV Clock $ 6

Prices do not include shipping from Florida.

73,

Ken, W8EK

Ken

The freeplay Self-Powered Lantern has an auxiliary power socket (3V, 350mA).

Each 30-second wind-up provides a minimum of 3 minutes of lamp time in ON position, and charges the battery in CHARGE position.

Battery will last for two hours' use of the Xenon bulb.

Amateur Electronics Supply carries them.

1067. 433MHz Power Amp. and Tx/Rx Switch Recommendation

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-10 00:00:00 UTC
From: Artur Leung <aleung@engr.ukans.edu>
Message-ID: <35CF0E4C.957E22F8@engr.ukans.edu>
Source record: 135389

Hi,

I am designing a low-cost FSK transciver using a FSK transciver IC (RF Micro Devices RF2905). It can put about 5-10dBm of RF output (Vcc=5.0V) to the antenna. Do you have any recommendation on power amplifier (single supply at +5.0V) that takes the output of the transciver chip and pumps out several watts to the antenna? That amplifier would be low-cost and easy to apply. If you have any recommended circuit(s), please let me know.
Also, do you have any recommended TX/RX switch to handle this power? The transciver chip's RF TX out and RF RX in are tied together to use a common antenna. Itdoes not require external TX/RX switch to handle the RF power by the on-chip RF TX output. However, if a power amplifier is added, the receiving front-end cannot handle several watts of power and will be destroyed without an external TX/RX switch. Preferrably the switch should be operated with single +5.0V supply.
Thanks for any information!

Artur, aleung@engr.ukans.edu

The 1200 uses a gates battery pack which are made up of "D" Lead Acid type cells. The case has room for screws between the cells. I dont know if that is the same thing.

From: kalikste@my-dejanews.com
Message-ID: <6qnb9t$ij9$1@nnrp1.dejanews.com>
Source record: 135401

I have a uniden president hr2600 for sale. It has been modded with a hr2510 chip, and it now covers 26-30mHz. As a result of the mod, repeater offsets don't work on the rig, but the chipswitch can be installed to fix that. Excellent condition w/mounting hardware.

Best offer in the next 5 days take it.

> I don't believe the FT-51R has simultaneous VHF/UHF receive. For me that's
> enough to make me want to look elsewhere.

You are correct, it does not have dual receive capability...

> I too would like to hear some comments on the AT-600 handheld. Compared
> with other 2M/440 HT's, it appears to be a terrific bargain.
>
> But I do have some questions to those out there that have "taken the plunge"!
>
> How's the intermod?

I live near Chicago and travel through the downtown area frequently. I've
not experienced any problems with it, even though it is only a dual conversion
receiver.

> What about the receiver's sensitivity on VHF/UHF, both in and out of the
> Ham bands?

The sensitivity (measured on a Cushman) is dead on the manufacturer's
specs. Out of band sensitivity is somewhat degraded, but still well within
acceptable levels.

> Does it appear to be well made?

The radio itself is quite well made, and should stand up to shocks. In
fact, I dropped mine the other day and it didn't even scratch the case!
(Thank goodness...)

> Is the receive audio loud and clear enough for mobile operation?
> How is ADI's customer service?

The built in speaker is a bit small and the audio is a triffle "tinny"
sounding, but with the capability of adding an aux speaker, there is
sufficient audio power to drive it to acceptable volume. A neat feature is
the menu option which allows you to channel the dual audio outputs to any of
these settings: I/I, I/E, E/I, or E/E (VHF/UHF).

> I know the specs say that the AT-600 has simultaneous VHF/UHF receive.
> But, can the receiver scan out-of-Ham-band VHF frequencies (specifically
> 159 to162MHz) while _simultaneously_ monitoring a single 450MHz Ham band
> frequency?

Yes, you can do all that and more... I was at O'Hare airport yesterday and
managed to monitor both VHF *and* UHF aircraft freqs simultaneously...

It also has a *real* full-duplex cross band repeat function, unlike many others who claim to be full-duplex, but aren't really since they cannot receive two freqs simultaneously.

Another neat trick is to monitor *four* freqs (almost) simultaneously by using the dual-watch capability on both receivers!

Use any 12 volt supply which is at least 5 amps and you can have the full
five watt output!

In fact, I *bought* the 2.5w version and simply added a 12vdc battery pack
to the purchase, since I wanted both anyway!

It's not necessarily the computer, Dan, especially if it is across the entire band.

I would more suspect it is the electric fuel pump in you gas tank that is causing the problem.

A quick way to diagnose this (sometimes) is that there is a fuse for the fuel pump under the dash. Run your car with the radio on - pull the fuse (the engine should continue to run briefly.) If the noise quits abruptly when you pull the fuse, it is the fuel pump.

I had this noise in my '85 Chrysler Laser, and got rid of it completely with a Mallory coaxial capacitor feeding the B+ side of the pump, installed under the back seat. Don't try to use the "feedthrough coaxial capacitor" from Radio Shack - I bought one and it is "not made reliably" - and I'll leave it at that. This is a component you will need to trust your transportation on, and you don't want to cut bucks here.

Good luck.

John...

1086. Cycling Suggestions Wanted

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-11 00:00:00 UTC
From: terryr@chesco.com
Message-ID: <35cf9464.6536282@news.chesco.com>
Source record: 135208
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur

I've volunteered to provide rolling communications for an upcoming 150 mile MS Public Service event, and would appreciate suggestions from those who have experience cycling with radios.

I'm planning to use my th79a with a Mirage B34 PA running off an alarm-system 12V/4AH sealed lead-acid battery. I hope to kludge a gutter-mount antenna onto the metal rack on the back of my bike and get a good-enough ground plane. I assume it will rain, so I'm looking for a light-weight waterproof plastic case to put the HT, PA, and battery in. I'll be listening/talking with a PTT lapel mike/ear bud. I'll be listening a LOT more than I'll be talking, so I calculate a half hour of talk time and 7.5 hours of listening should be well within the 4AH capabilities of the battery.

Anybody have comments on this setup? Any suggestions on a light weight waterproof case roughly 6 x 8 x 12 inches? All comments appreciated!

It has an SMA connector and there are adapters for converting it to BNC.
It will also let you select FM/WFM/AM modes. I like mine alot, only
problem is FM overload and intermod on the 30-50 MHZ band...

1091. CDE Rotor Controller - Transformer Info?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-11 00:00:00 UTC
From: martyt@pobox.com
Message-ID: <35cfaab5.444160279@news.supernews.net>
Source record: 135213
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.antenna

My CDE AR-22 control box is going south - seems to be the transformer. I put in a new run capacitor which made it work great for a while - now it'll turn maybe 90 degrees and then stop dead; if I wait a few minutes, it'll go another 90 degrees or so. The transformer gets very hot and generally looks pretty old and ragged.

Can anyone tell me what I could use for a replacement transformer? Looks to me like this one has a 5VAC tap and a 24VAC tap so maybe it's not too hard to find a replacement. Anyone have the schematic to tell me for sure?

Thanks,

-Marty KI0LO

I'm looking for ham radio BBS systems and dial-up packet radio servers.

Anybody have a current list?

Thanks,

Pat Clawson

1104. WTB: Mobile 2m or dual w/ 440

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-11 00:00:00 UTC
From: David <chillyman228@hotmail.com>
Message-ID: <3NRz1.641$rF2.620510@news4.atl.bellsouth.net>
Source record: 135226

I am looking for a used either 2m or dual w/440mhz mobile radio. Needs to be converted, or be able to be, to transmit on public safety freqs also. I work in the public safety field and am working on getting my nocode pretty soon. Don't want to have to have 2 radios in the truck taking up already limited space.

info to chillyman228@hotmail.com

Thanks

1105. Help with TS-430S

Hi there :)
I'm an electronic musician seriously looking for old SYNTHESIZERS,

KEYBOARDS, drum machines, analog sequencers, vocoders, unusual old

effects and all related electronic musical equipment.

In general, I'm looking for working or non-working instruments made in the

late 60's, 70's and early to mid 80's. Machines with KNOBS, SLIDERS and

especially ~PATCHCABLES~:

The more unusual, the better.

_Moog

_Synton

_E-mu

_Electro-Harmonix

_Ionic

_OSCar monosynth

_Roland _TB-303 Computer-Controlled *Bassline

_Roland _TR-909 Rhythm_Composer

_Roland _TR-808 " "

_Pearl Syncussion SY-1

_ARP _sequencer

_EML-400 _Electrocomp _sequencer

_Korg _SQ-10 _analog _sequencer

_Simmons SDS5, 6, 7 Drum Brains
_Interesting ElectroHarmonix, Mutron and other effects
_Roland TR-606 Drumatix
_ANYTHING SIMILAR!!

Also interested in some old literature on electronic music.

If you have any of the above or similar equipment which you'd like to sell,
or know where i could find some, please email me at rolandman1@aol.com

If you'd like to, please include your phone # since my email has occasionally
been unreliable in the past.

Thank you very much for your time and I apologize if this message annoys

anyone.

For the noise problem you need to install a line filter on the fuel pump.
It's best to do this as close to the fuel pump as possible. I had a Ford
Mustang with that same problem and once I installed the filter the problem
went away. Good Luck 73's Eric KB2FZG

In reading the B&W ads, I don't see prominent mention of the fact that
it uses resistors to flatten its VSWR response. At least some hams are
misled in that regard by not making explicit that antenna efficiency is
greatly compromised (there are, of course, situations where that's an
acceptable tradeoff). However, I agree that it isn't as blatantly fraudulent
as the original resistors in an epoxy block we're discussing.

>IMHO, in the context of what hams consider to be an antenna tuner,
>resistors do not a matching circuit make.

Well, the loading resistors certainly aren't matching devices in the
conventional sense. A taper pad would be a case where resistors
could form a matching circuit in the more conventional sense (and
still be lossy).

I must say that this is an extremely rare occasion. I find myself in agreement with Charles. CB, GMRS, FRS, and cellular phone are designed for the sort of usage David is outlining. Amateur radio isn't intended to be solely a family intercom. If that's the only reason David's wife has for being licensed, then I'd suggest she should insist on using a more appropriate radio service instead.

If one isn't at least somewhat interested in radio for its own sake, amateur radio is the wrong service. Amateur radio can wear many hats, but that's an essential one to defining the character of amateur radio.

1119. My PC is QRMing My HF Rig! Help?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-11 00:00:00 UTC
From: DavidC <davidc@bit-net.com>
Message-ID: <01bdc535$70750e20$4e8a92d0@davidc.bit-net.com>
Source record: 135241

I've got some serious QRM getting into my ts690sat from my PC ... help!

It is a tower case PC running an AMD 200mmx on an ATX motherboard with a 19 inch Nokia monitor. It is broadcasting at 14.313 (and many many other frequencies) into my rig. I have disconnected everything so that the rig is connected directly to the coax feed, which runs 100 feet to a dipole, and changed from an external the internal speaker.

The one thing I do not have is a good ground. The shack is in the basement and I have yet to figure out the best way to ground things. I tried running a ground from an outlet screw and that made things worse (though it was from the same outlet to which the PC is connected).

It needs to be at least 5 or 6 feet from the rig before the QRM almost disappears. I had hoped to run computer control of the rig, or to at least use the computer for QRZ lookups and logging, but not if I have to place it on the other side of the shack from the rig!

Helpful Hints Anyone ... Please? Thanks! & 73, DavidC AA1FA

1120. Re: Air Mobile Calling Freq Proposal

From: jim@rst-engr.com
Message-ID: <35d05fb7.1492666@news.gv.net>
Source record: 135242

trinit69@idt.net.nospam (Tom)
shared these priceless pearls of wisdom:

->With the upcoming sunspot cycle, I think it would be fun to promote more
->air mobile operation on 10 mtrs.
->
->With that in mind, I'd like to propose an informal 10M air mobile calling
freq.
->
->Traditionally, pilots tend to congregate on "numbers" freqs on the air
->bands, like 123.45 (the numbers)

Yes. If I or the FCC catch an airplane using 123.4 or 123.45 we will bust them back to the stone age. These are FLIGHT TEST frequencies, not available to the general aviation crew, and you mess up several thousand dollars in testing time every time you key up on one of these two reserved frequencies.

Understand that when we are at the end of a two or three hour test, just getting ready to take the final data points and "Good Buddy Charlie" calls "Old Pal Phil" on these two frequencies that we get to throw away the full data set and do it again tomorrow. This does NOT make for happy campers in either the avionics gang or the FAA/FCC group.

There are specific chatter frequencies that are condoned by the FAA/FCC, but 123.4 and 123.45 are *NOT* on the list. If you don't believe me, ask the Coors Silver Bullet Team that we busted at the Watsonville Air Show a few years ago.

1122. Newbie Cigarette lighter question.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-11 00:00:00 UTC
From: SamGustin@atent.net
Message-ID: <35d05efa.2891607@news.aimnet.com>
Source record: 135244

Just got my license and bought my first Icom 2 meter hand held. The radio does not come with a cigarette lighter adapter. Can I simply buy a $5.00 "generic" lighter adapter from Radio shack as long as it has 12vDC and the right 3.5mm plug. The Icom brand is very expensive.

Is this also true for a AC wall adapter too? I just want to be sure before I damage my new radio.

Sam

Pls. leave your replies here... my IPS's e-mail is down.

The problem, however, is that you sound like you are cutting
down an *existing* antenna to retune it. It may have a loading
coil in the middle, which totally changes the length relation-
ship. It also may have active components in the base, especially
if it was an electrical 5/8-wave antenna in its previous use.
Finally, even if this is a simple home-built 1/4-w antenna with
no active components, you should probably test it for resonance
and SWR before using it. Formulas are nice, but I'd play it
safe and check the antenna before using it.

Bob, KI8AB

1129. FT50 Cell Band Question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-11 00:00:00 UTC
From: Jeff <jeffj@scott.net>
Message-ID: <PNR918436810q@scott.net>
Source record: 135251

Can anyone with an FT50 verify that when scanning the 968-981Mhz frequencies, which on my FT50 allows one to hear the cell band due to harmonics, they can hear both sides of a conversation. My brother has a FT50 and claims that he picks up both sides of a conversation, but I only pickup one side. I'm not trying to be mischevious, by listening, but am wondering if it's just my FT50 that has a problem that would only allow one side of the conversation to be picked-up. Comments and suggestions would be welcomed.

I have a YAESU FTDX 560 being returned from YAESU USA for repairs.
It has been completly restored to original condition. It has a pair
of 6KD6 for finals, not 6146. I also have a FL2000B amplifier that
was also at YAESU USA for restoration. I am asking $400 each or
$700 for both plus shipping.

If I recall, some of the earlier B&W ads showed an actual resistor. The ones from 1990 showed a "balancing network." They are not currently advertising. I just ran a NEC-4 model of their 90-foot long folded dipole. To get a feed-point Z that was reasonably resistive (563-j21 on 14 MHz, 490-j7 on 3.5), I used a 1600-ohm loading resitor in the center of the upper leg of the folded dipole at 60 feet. The result was an antenna iwith -5.2 dBi gain on 80 meters, 4.95 dBi gain on 20. By comparison, with the resistor set to 0 ohms, the gain was 6.2 dBi on 80 and 9.77 dBi on 20. On 80, it is somewhat lossy, but those who know antenna theory would not expect it to be otherwise -- one does not get a flat VSWR across all HF without resitive loading. Admittedly, the manufacturer does not use his ad to educate people about broadband antennas, but he is not making specific, untrue claims.

> >IMHO, in the context of what hams consider to be an antenna tuner,

I have used resistive matching in a number of ways over the years. Knowing of such a thing, I qualified my statement iwth "in the context of what hams consider to be antenna tuners." :-)

The two most common rationing methods used by the FCC are first come first served or a lottery. If there is a fixed number that the FCC wishes to allow on HF, then they should issue only that number of licenses and no more. That's the way they deal with broadcast spectrum. A new license cannot be issued unless an allocation becomes open (say because a previous licensee's station goes dark). But I see no evidence of a need to ration amateur HF access. The FCC has never set a target number for amateurs. And our spectrum is vastly under utilized compared to the spectrum of many other services who seem able to accommodate a much higher user density than we presently have.

This idea of rationing HF (phone) access goes back a long way. In 1934 it was the ARRL position that HF could accommodate only 16,000 phone stations, and urged higher speed Morse tests should be used to limit access to HF phone. Of course today we have 368,000 stations licensed for HF phone. It would seem that band capacity was grossly underestimated by the ARRL back in 1934. They failed to realize that technology doesn't remain static, and they failed to realize that operators would change their operating practices in the face of higher numbers. But both things did happen, driven by the release of all of HF phone to Generals after WWII.

To a very large extent, necessity is the mother of invention. The higher numbers post-war drove amateurs to adopt better technology (J3E) and better operating techniques. So the increased numbers actually had a very positive effect on amateur radio.

I note with some bemusement that the plain language rewrite of Part 97 expanded, inadvertently I'm sure, our options for voice emissions. We are now allowed to use D3E (digital voice) in any HF phone segment. This holds out the promise of a technological revolution in the way we operate phone, and an ability to accommodate a large amount of growth. But that's unlikely to happen as long as plain old SSB is "good enough". We need a driver to get amateurs to switch, and that driver could be the same one which drove the switch from

AM to SSB, IE greater numbers. That would be good for amateur
radio. It would also go far to improve our image, which is currently
that of a technological backwater.

> My conclusion is that code tests for incentive licensing are the best
>method we currently have for upgrading. Also, why are we changing the
>system? What is the problem?

The problem is our demographics. Our HF Generals have an average
age of 63, and that is currently increasing at nearly one year per year
because not enough younger people are upgrading to General to keep
the group demographics stable. If this trend continues, in a decade
half of our Generals will be dead. (Advanced and Extra aren't growing
enough to take up the slack either.) A nearly 50% drop in HF operators
is not a good thing for the health of amateur radio. We need a large
amount of growth over the next decade just to retain the status quo.
And that isn't happening. IMHO the major reason it isn't is the Morse
speed tests, which rightly or wrongly are perceived as irrelevant
hazing rituals by many who would otherwise upgrade.

1135. Yaesu FT-8100R, IC-2100H, and even more stuff

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-11 00:00:00 UTC
From: rrickets@ix.netcom.com
Message-ID: <35d07df9.17065801@nntp.ix.netcom.com>
Source record: 135257
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Icom IC-2100H 2 Meter rig w/ extended receive. Like new, never mobil, with all original docs and packaging $220 plus shipping.

SOLD Icom IC-207H Dual Band (144/440) never used mobil, with all original accessories and box. Mint condition. $300 plus shipping.

SOLD Yaesu FT-8100R deluxe dual bander, mint, with all original docs and packaging. A super nice rig, I've used it for base operation only, has never been mobil. This is a bargain at $420 plus shipping.

Another Yaesu FT-8100R deluxe dual bander, mint, with all original docs and packaging. This one has been run mobil in my car, but doesn't show it at all, and works perfectly. $400 plus shipping.

All the rigs listed above have been used only slightly, and are in true mint, as new condition. They are all less than 4 months old. If you are in the market for extremely nice equipment, then here it is. As proof of this, I offer 5 day return privelege on the above items only.

SOLD M2 SQloop loop antenna for 6 meters, excellent condition. Has been used in my attic, never outside. This provides excellent performance during 6 meter openings, and I've work coast to coast using 50 watts on this antenna. Includes original docs. $90 shipped CONUS

SOLD M2 SQloop loop antenna for 2 meters. This is the 'little brother' to the 6 meter version, and works great for 2 meter SSB contacts. Never used outside, but only in my attic. $40 Shipped CONUS

Motorola VHF power amplifier - 4 in/50+ out. This is an item I bought to use with the packet radio mentioned below, to boost its output to a more usable level. I haven't used it much, but it is clean and works fine. Tests using my wattmeter indicate 5 watts drive give over 70 watts out, 1/2 watt in gives 12 watts out. It was manufactured for 150-174 Mhz, but has been 'tweaked' down for 144-148 Mhz. About the size & weight of a typical brick amplifier, and uses 13.8 VDC. Input & output are SO-239 connectors. A bargain at $65 shipped CONUS

Van Gordon 1:1 BALUN New in the package, $12 shipped CONUS.

MFJ-1704 4 Position coaxial antenna switch, Excellent condition, used for receive only. Sells for $59 stteet price, I'll sell mine for $40 shipped CONUS.

MFJ-1702B 2 Position coaxial antenna switch, grounds in center position, mint condition, $15 shipped CONUS.

MFJ-8621 Packet Tranceiver, bought new for use as a dedicated EMWIN receiver. This was purchased as an experiment. I wanted to re-crystal for 150.435 and use it to capture EMWIN local feed. As it turned out, the wideband nature of the front end of this rig wasn't selective enough. But it works fine as a packet rig on it's stock freq of 145.01. So rather than fiddle with it any more I'm selling it, and will toss in the EMWIN crystal as well. Unit is in mint condition, working perfectly, with original docs and box, also including the extra crystal for those in a less rf-congested area. $85 shipped CONUS.

MFJ-1026 Signal Enhancing Noise Filter. Used briefly and then I fixed my noise problem so it's surplus. $85 shipped CONUS.

MFJ-956 Antenna Preselector, 150 Khz - 30 Mhz
I used this on my old general coverage receiver and retired it when I got my R8B. Tunes longwire or any coaxial antenna for RECEIVE only. It is a passive preselector, so it doesn't require any power. This is not meant for transmitter tuning. In mint condition with all original packaging, a steal at $25 shipped CONUS.

Diamond SX-200 SWR Bridge, in as-new condition with original docs and box. Bought an MFJ-259B (great piece of gear!) right after I bought this, and never used it. $70 shipped CONUS.

Terms are postal M.O. payment, I'll supply phone # and references if requested. Shipment will be via Certified Priority Mail.

Thanks and 73,
Ron Ricketts WA5VFA

As you've discovered, ground is not some mystical noise sink. Grounding
often makes noise problems worse. The real answer is *shielding*. Noise
currents need to be retained inside the source by adequate shielding.

Unfortunately, most computers don't use RF grade shielding. That requires
a metal to metal bond at all seams, not a paint to paint bond. And good VHF
shielding practice requires a sheetmetal screw every 5 cm along every seam.
So sand off the paint on mating surfaces, and add screws. If the case has
large ventilation openings, close them with copper mesh. Once you create
a complete and tight Faraday cage for the computer, noise can't get out.

But most of your noise is probably coming from the monitor. That needs
full shielding too. The plastic case of most monitors provides none, so
you have to upgrade the shielding by using copper mesh, copper tape,
or an EMI spray coating. The face of a color CRT is self-shielded by the
shadow mask, so you don't need to cover it. But B&W CRTs need a fine
wire mesh mask placed over them to prevent noise egress from the
monitor. This can double as an anti-glare filter so it's a good idea
anyway.

Of course all cables need to be fully shielded, and fitted with ferrite
suppression. The Radio Shack snap together ferrites work well for
this. Don't ignore simple things. Make sure the cable hoods (which
should be metal not plastic) are screwed down tight, and are bonded
to the cable shields. This can make a large difference in the amount
of radiated noise.

Now your radio needs the same treatment. It should only receive
signals coming from the antenna. If you hear computer hash with
the antenna coax disconnected, you need to work on your radio's
shielding. You may need to fit suppression to its power supply
cabling, and your microphone cable, too.

If you only get the noise with the antenna coax connected, but moving the computer a few feet gets rid of the noise, then you have a common mode problem with your transmission line.
Noise is going up the *outside* of your coax to the antenna and then back down the *inside* of the coax to the radio. You have to stop that. A normal choke balun should do the trick (and also get rid of any RF in the shack problems you may have too).

I agree to disagree.

But I must also confess my hope to my wife and my 1 year old girl to
be as "Ham-my" as possible.

My hope for my family's interest doesn't stop after they are all
licensed. As least they can start "sniffing" around rather than just
see me enjoying daddy's hobby. They can formally check in the YL net,
personnally experience the 6M band opening, the use of a repeater, and
get to know some other YL's.

None of that is available to encourage them unless they have the
ticket. Note that I am not promoting the "dumb down" approach; in
contrast, following the rule is what I am talking about.

Many of us have been licensed for too long and cannot relate to the
fact that there is a group of prospected Ham's that can be discovered,
with some positive reinforcement.

While the motive to get my wife licensed is arguably selfish. No one
can really tell if she will develope her own area of interests in
Hamming in the future after a hard earned license. However, this is
by far better than hearing hams get burned out and get out of the
hobby.

One should not draw an equal sign between Ham Radio against CB, FRS, GMRS, and Cellphone. Ham Radio is a unique service that neither operated by merely paying for a fee, nor getting on air by buying the equipment. It takes, at least, an exam and some level of studying. It's 100% easier to get a gun than a Ham license here in the US! I believe this is what truely setting Ham Radio apart from other no-brainers' services.

As I understand your argument, you are in favor of increasing the ham ranks by sheer weight of numbers - regardless of quality or level of interest - in an effort to justify its continued existence..

Maybe the heyday of amateur radio is forever gone. Why don't we attract newcomers like we once did? Advances in communications now occur in labs, not on the ham bands. Young kids are no longer excited about an across-town CW contact when they can use their cellular phones, and have grown up in an era of watching live television of men walking on the moon. Technology has left most youngsters behind in their ability to participate in the growth of it - except as users.

To draw an analogy to labor unions, they at one time served a very important interest, but are fast becoming an artifact in the whole labor-management relations world. They now seem to exist largely for the entertainment and enrichment of their leaders. Can amateur radio continue survive in the "public interest and necessity" with some of the attitudes of self-aggrandizement I have been reading in this thread??

The government regulation of our "hobby" is not unique, but can we continue to justify our existence compared to the other "hobbies" that are reulated? I owe my career to the interest created by amateur radio, and would never suggest diminishment of the hobby. But, we must be realistic in the future justification of why the government should continue to allow us the "super hobby" status we have enjoyed for all these years.

Why should we be debating "filters" and "upgrade incentives" when the problem seems to be the continued healthy life of the hobby?

Yes. This is a legitimate reason. This is as legitimate as many many
other reasons to get a Ham ticket.

> [snip]

>I can't help but think that when people commonly get Ham tickets in the name
>of expediency instead of through a genuine interest in the hobby, then
>Amateur Radio is being treated like CB.
>

Sorry Chuck. I disagree with you on this.

Amateur Radio will be treated like CB __ONLY__ when one day the FCC
decides to waive all the test requirements to get a Ham ticket. One
should "earn" the Ham ticket, not to "Buy/get" one.

As long as there is a test, Amateur radio is nothing like CB, FRS,
GMRS, and Cellphone.

I am new to this newsgroup and I don't know if my question has been already answered.

I am planning to send some equipment, tools and AC/DC transformers, all of them rated for 110 volts and 60 Hz to a friend of mine living in a country using 220 volts and 50 Hz. About the voltage there is no problem using AC stepdown transformers.

What is going to happen because the 60 to 50 Hz difference?.

All information and sugestions will be very appreciated.

> >
> > Short-wave, FM, AM, etc
> >
> > Every piece of information will be highly appreciatedOK, you have gotten into a very
hard area. First, you could start a AM
station. To get the kind of range from NY to Carribean, you would need
a 50,000 watt transmitter. These are very expensive. I recommend you
download a free package of software to help you find the range on SW and
AM. You can find this at the FCC's website. Go to search, enter HF,
find the HF Services page, and you will find something. Go to
Continental Electronics page. Next, you could go FM, but it would be
extremely hard. To get coverage from NY to the Carribean, you would
have to buy lots and lots and lots of translators. And don't forget the
license fee, which would cost LOTS a year with all those translators.
You can try SW, which may be the most economical radio signal way of
doing it. To get on SW, you will have to buy an expensive SW

transmitter. 50 kW is fine. (YOU WILL ALWAYS NEED AN ANTENNA UNLESS YOU ARE DOING COMPUTER BROADCASTING!) However, you could to net broadcasting. This costs about 10,000-25,000$, requires computers, etc., and can span the world.

Hello Hugo,

Depending upon the tolerances in design, there may be a problem if the
iron core becomes saturated. At higher frequencies, less iron can be
used for the same power rating.

Another problem to consider is the exact mains voltage. At the moment,
European countries are moving to 230 Volts, a compromise between the
UK (240 Volts) and most of the other countries that had a 220 Volts
mains voltage. If you are sending the equipment to Europe, you will
have to think about this.

Brand New Portable Antenna Analyzers for sale.

Active VSWR meter giving direct readings of both VSWR and % reflected RF power.
It is designed to check the exact resonent freq. of any antenna, HF, VHF & UHF.
It has a 4 digit freq. counter and an analogue meter, with a switch for 2 freq.
ranges and 2 knobs for freq. adjustments, Fine & Coarse.
It has major advantages over a standard VSWR meter in that it sees the antenna
system exactly as the Transmitter sees it, plus the frequency is swept to see
where its resonating. Makes trimming so much quicker and easier !

For further info E-mail RTE
at rte@iafrica.com
or call (011) 882-9182 or 882-0762
or Fax 882-9182
Johannesburg.

RTE also buys, supplies, rents and repairs Comms. Monitors plus all sorts of RF
Test Equipment.

1151. Need Info on Kenwood TK-801S commercial radios

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-11 00:00:00 UTC
From: Seth Miller <seth.miller@worldnet.att.net>
Message-ID: <35D0B360.D8E6012C@worldnet.att.net>
Source record: 135273

I have come by a couple of Kenwood TK-801S radios (these are UHF radios intended for commercial service, but easily tune down to 440-450) and need a copy of a service manual. Will happily reimburse copying costs, of course.

Second question: These radios are synthesized, but use a set of PROM's to set frequencies - and you need a special PROM burner to create these. Does anybody have access to one of the Kenwood PROM burners? I would be happy to supply the PROMS if you would burn me a set or two. I guess I could find a two-way shop with the equipment but if they charged me labor to burn the PROMs it might cost more than the radios(!), so this is a last resort.

I would really like to get these working - they are workhorses without any of the bells & whistles, but are truly bulletproof radios.

Thanks in advance for any help or leads -

- Seth N6BMB

I have heard lot's of XYL's with tickets which I suppose is a good thing, the part that bugs me is for someone to get a ticket with no interest in at all in radio, I've tried to strike up conversations several times with guys on 2m asking about their HF interests or other modes they enjoy. The hair stands up on the back of my neck when I get the reply "Well Tim I'm an admitted appliance operator, I just operate 2m repeaters" Arrrghhh. Something tells me no matter what you showed this guy he's NEVER going to pick up a soldering iron. I'ts great for people to join and learn as they go, I dont particularly care for those who join and never go anywhere but the local 2m repeater.

I have wired 12V to an HT more than once, as long as the HT
will accept 12V. Remember that a car on charge puts out closer
to 15V than 12V. Read the manual carefully. Best of all,
find a buddy with the ICOM cigarette lighter adaptor, and see
how many volts it puts out.

A group of hams were discussing the Yaesu 1000D radio today and the subject of the latest serial numbers came up.

It has been said none have been made after 1995.

I have noticed at my local Ham store the 1000D's they have in stock have a serial number that begins with 5.

Could it be Yaesu quit making them in 1995 and just have a large stock of them.

Anyone have a 1000D that has a serial numer that begins with 6, 7 or 8 that would be 1996, 1997 or 1998 as manufacturer date.

Another thought on the cigarette lighter, or the wall wart for that matter. Make sure you get the polarity of the plug correct. Other than that, as long as the voltages and amps are correct, it doesn't matter whose name is on the adapter.

Good Luck

Kind of a harsh stance, Tim.... So long as they
are good operators, and operate legally I fail
to see the problem with this. Having tens of thousands
of "appliance operators" keeping our VHF bands
active does a lot to keep commercial interests at bay.
Everyone has their own area of interests. I find more
and more my own operating time is being limited to
chatting on two-meters while on the drive to work.

David,
I had a very similar problem, I had to replace the case. Enlight makes the best power supply for a case, but they are expensive. A good way to check if it is your case is to: unplug everything from the back of the computer (except for power cable), then turn it on, if you still get it, then you know it is something inside the case, like a HD or something (very unlikely). I suggest that you take apart the case then disconnect power from all devices, including MB, and turn on the computer, if you still get it, then you know it is the PS.

Hope this helps, it did for me.

Hello Everybody,
I have a RFConcepts VHF1-60 2 meter FM only amplifier for sale. This amp has very little use and is in excellent condition. The amplifier will accept 1-8 watts input and will put out 60 watts, perfect for HT's. I am asking $90 for this. If you are interested please reply to me.

Thanks and 73, Tim KU4IY

1174. Re: Help, I am an electronics engineer and don't want to work on a farm.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-11 00:00:00 UTC
From: Louis Bybee <louisb@datacomm.com>
Message-ID: <35D0F78D.357E4BC7@datacomm.com>
Source record: 135296

Hello Jim:

Without knowing you personally it's difficult to know if this letter is for real, or a joke (as many communications on the Internet are).

If this letter is in fact real, It is a very sad situation that I believe can be improved.

I have struggled with grammatical and spelling errors ever since I started school. I am not the smartest person in the world, but I learned a long time ago to approach things that get in my way with a bulldog approach, bite, hang on, until I master the task or element in my way. Anyone who can complete any college degree, let alone Electronics, has the intelligence to overcome almost any thing. I would suggest that you, and others as necessary, work out a plan to assist you in your goal (improving your spelling, and writing ability). In my case, I have over the years, enlisted the assistance of friends and family members in the following way. I submit all communication to them for correction. I then make the corrections myself, and keep a notebook with the words I need to study, common grammatical errors I need to look for, and general suggestions for overall improvement. I also keep resources close by to make the corrections I discover before seeking assistance. I find that I can't overcome things that block my intended path until I have the necessary motivation, and wisely invest the necessary time required to do so. As for the type of work you do there is no shame in any honest work well done. I worked mowing lawns and weeding while the work in my normal high technology field was unavailable. I earned less than a third of what I was accustomed to, it was hot dirty work, and at first I was not used to physical labor, but it paid the bills until my normal work was available.

My wife and I are rearing one of our grandchildren. He is severely developmentally disabled. We were afraid that he would never meet the levels that other children do. While he may in fact never meet all levels that other children do, we have found that if we encourage him to persist long enough, and work to find methods and tools that allow him to progress in the areas he has difficulty with, almost anything is possible. Granted we all have to work a lot harder than other families do, but it can be done.

Please persist until you find the people and agencies willing to help you meet your full potential. Like I said earlier, given sufficient desire and motivation I am convinced you can achieve anything you want to, as evidenced by your Electronic Engineering Degree.

Good luck.

Louis

AOR Spectrum Display Unit SDU-5000
$650 - buyer pays shipping

This unit is in mint condition and is the current production model compatible with the AOR AR-5000, as well as ICOM R-7000, 7100, and 8500 wide band receivers. Other receivers with 10.7MHz I/F may also be suitable for use with the SDU-5000. While earlier versions required a ROM change for use with ICOM receivers, this unit has both AR-5000 and ICOM command sets in the production ROM.

The following AOR web page describes the unit and gives specifications:

http://www.aorja.com/sdu5000e.html

Money order for $650 plus shipping costs.

While my new SX-101 is a nice receiver, it really needs a good product detector. I understand that the SX-101A does have a product detector and I would like to rebuild the existing detector to match.

If anyone could send me a partial schematic of the area of the 6BY7 product detector, I would be very grateful.

A flatbed scan of the area (gif, jpeg, or tif), or a photo copy would be fine. I will be happy to reimburse your costs.

Thanks, Bruce AB7YD

Hi folks,
I'm cleaning the shack and down sizing some equipment that I wont be using.
Please email with questions. Terms are check or
money order. Prices dont include shipping. I can ship by what
ever means you like. Net references available.

UPDATED LIST AS OF 8/3/98:

6. Regency CB converted to 10M SSB. Radio runs 15W output PEP
and covers AM and USB. Freq coverage is 28.5-28.8 Mhz in
23 channel increments. Has VFO slider for both TX and RX,
to cover all the in-between and gap frequencies.
Can be easily moved up
or down the band with just a couple $5 crystals (available
from JAN Crystal). Nice SSB tx audio from hand microphone.
Great for mobile/backpacking. Nice cosmetic condition too.
Includes manual, sams photofact, mic, power cord,
and radio. $65 + shipping

8. Kenwood AT-120 mobile antenna tuner. Matches the Kenwood
TS-50 in size. Originally for use with Kenwood TS-120 HF
transceiver. Covers 80 thru 10 meters. Includes lighted VSWR
meter, as well as tuner bypass position.
Simple coax in and coax out connections.
Very clean -- works well. Also very close in size to Icom 706
and Alinco DX70 mini HF transceivers making a nice
compact ham station. $80 + shipping (reduced price)

10. Vibroplex #6 "lightning bug" key -- late 1930's vintage with
Japanned base (no gold trim). Keyer is fully functional but
is missing both the original dit arm weight and the vibroplex name
plate. Homebrew dit arm is included. This is a nice bug --
took it in on trade, but decided that I like the auto-keyer
since I get "glass arm" sending with a bug. This one is
probably not collector quality, but works great with my S-line and
gold dust twins. $70 + shipping (reduced price)

14. ICOM IC3N UHF handheld transceiver covering 430-440 Mhz (note the
band, this is for use in Asia, Central, South America, and Europe.
Does "minus 5 megahertz" repeater split and automatically transmits
the 88.5Hz tone burst to open repeaters (as in Japan). Good
cosmetics, good electrical. 3 batteries, radio, antenna, and
wall charger. $99 + shipping

15. JC Penney 981-6247 SSB/AM CB radio -- AC/DC, 40 channel, and
ready to convert to 10 meters. Will include converstion
instructions (only requires a change in the oscillator
crystal). Will also include SAMS photofact. Rig works fine.
Just no time to convert it. Would be great for new novice or
tech plus to try voice on 10M for an inexpensive price. Works
AC and DC (has built in power supply for 120VAC). Includes
hand mic, and AC power cord. Wood grain cabinet. Smaller size,
does not take up much room. Has vol, sql, clarifier, tone, dim,
vswr calibrate, mode switch, pa switch, nb, anl, etc. Again,
excellent for 10M SSB conversion --will include conversion
plans -- simple 2 crystal change and receiver tweak.
Currently still on CB band, but slider in place.
$ 70 + shipping. (price reduced)

17. Home brew boat anchor power supply -- designed for use with
all HEATHKITS. Much heavier duty than the HP23 supply.
Could also be used with the COLLINS S-line and KWM2
transmitter/transceiver with simple re-wire of the octal
power plug. No schematic, heavy (about 40 LBS), works fine.
$45 + shipping

19. Radio Shack 2M 30 watt amplifier with preamp. Model 19-1122.
0.5-5w input will give 30 watts out. Nice helical front end
and GaAs FET preamplifier cuts down on intermod. In box, brand
new, never opened, never used, tape seal still in place.
Everything included: box, manual, packing material, etc.
Paid $99 new from Radio Shack. 1/2 price - $50 + shipping.

20. Icom HT rapid charger, model BM-82U. Found this in the closet
and dont recall what radio this charged. Does not fit
Icom 2AT/3AT/4AT or 02AT series. Maybe works with
the xSAT series rigs or commercial equivalent ??
$40 + shipping

21. Yaesu MD-48 touchtone hand mic. 8 pin, up/down buttons, 16
button touch tone. Think this was an accessory for the
FT-726R and FT-736R. $30 + shipping

22. Radio Shack PRO-34 handheld scanner.
Covers 68-88, 108-136, 137-174,
380-512, 806-960.
NO 800 Mhz GAPS! COVERS CELL RX TOO! Fair
physical condition -- one ding on the lower
edge of the case, repaired with epoxy. Does not look bad.
Works 100% electrically. With instructions, wall charger,
flexible antenna, and radio. $99 + shipping

I'm located in Portland, Oregon.
No LIDS, No KIDS, No SPACE CADETS. NO BAD NEWS either.
Happy to discuss details via email or can call you. Net
references available on items that I've already sold.

1182. HELP W/ MOBILE ENGINE HASH

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-11 00:00:00 UTC
From: cslc82@email.mot.com
Message-ID: <35cf89a6.154994290@netnews.worldnet.att.net>
Source record: 135351

Just installed a remote mount Icom 706 in a '96 Ford Taurus. Power leads go right to the battery. Radio has 6" heavy ground lead to chassis.

When engine is running, there's about 3 s-units of hash noise (sounds like white noise). It's not ignition pulse noise (noise blanker doesn't help) nor alternator whine. Pitch/intensity doesn't change when engine RPM changes; it's just THERE.The noise goes away when the engine is shut off. Noise also goes away when HF antenna is removed.

I assume this is the engine's computer? How to isolate and rid of this???

Problem #2: When transmitting, RF is getting into the cellphone speaker. This is a mobile adaptor (RF amp, docking station, speaker/phone) for a MicroTac Elite...the unit is "on" even when the flipphone is removed. Can't tell if RF is getting in the antenna, power leads, or control lines. Help isolating/eliminating this one would also be greatly be appreciated!

Tnx & 73,
Dan

I have a really fine Kenwood TS-120 Solid State HF rig for sale.

Super clean, some minor scuffs on top of case but paint is fine.

Comes with manual, hand mike, all working just tuned up by Kenwood technician and got clean bill of health.

Contact me via email.

Asking $375.00 + Shipping in the 48 states.

> ...VX-1R...the worst HT I have ever owned...

I also purchased one just last week. Maybe I "went into it" with different expectations, but I sure am having fun with mine.

I already had the ADMS-1 software package, which helps a lot with programming.

I just returned from a quick trip to Ontario Int'l Airport, and successfully SCANned away while approaching the terminal and cruising about.

Earlier this morning, I handled an emergency call from a motorist on our I-91. It was a fatal traffic collision, closing the freeway for hours. I was at my desk with the VX-1R, which picked up the call. I went ahead and began responding and taking down the information with my little .5-watter, and it handled the entire call perfectly.

I guess my point is: I knew its limitations. I read up on it on the Internet. I chose not to grab a used/demo Firmware v105 and got a v106 - I just didn't feel the urge to illegally monitor cellular telephones. The unit - for MR - is working out to be better than I expected it to be.

>>...I am now in possession of the FT-50...

Interesting...I have a FT-50RD, too. Also uses the same ADMS-1 programming software from RT Systems. I also have its commercial cousin, the Vertex VX-10.

You are correct - it looks, feels, and performs much differently than the VX-1R.

>>...I can hear distant stations without removing it from my belt...

Aw, c'mon - that's a cheap shot against the VX-1R <grin>. You really didn't expect to be able to belt-mount it and hear it in noisy environments, did you? Of course not. Shirt pocket, maybe. I'm glad it uses the same speaker-mikes I own for the FT-50 and VX-10 (and even their FRS units!!!). I am glad that at least ONE manufacturer takes accessory compatibility into account!

A very broad question...and no real fast and firm answers for you.

What are YOUR communications needs? Do you simply need to monitor for long periods?

Anyway, I use 7.6V, NiMH, 1800-2000mAH packs in my Vertex VX-10 and Yaesu FT-50RD HTs. Either situation lasts a weekend of moderate use.

And I have excellent results with the LithiumIon 3.6V, 700mAH cell that comes with the Yaesu VX-1R.

One fix that works quite well for Ford fuel pump noise is to place a
0.01 ufd capacitor across the fuel pump leads just before they enter the
fuel tank. I know one fellow who did it and eliminated his noise
problem.

Harry,

Are you looking for new, used, solid state, BA? $1,000 can
buy a lot of radio in the used market. Look at Ten-Tec rigs
for some great used values. You can get an Omni-C for $500 +/-
and Ten-Tec can still service it, should it need it. Should
be all the radio you need for a while.

Have you calculated antenna(s), mike and/or key, watt/SWR meter,
and/or tuner, etc., etc. into that thou dough? Or are you going
to sneak that in later under the xyl's nose? ;)

73 es congrats on the ticket,

Casey, KS7J, FISTS nr 3648, CC nr 450

> Harry Reed, AB7YF

There are 3 logical choices:

(1) Ten-Tec Scout: With the hand held mike and 3 extra band modules, it costs around $700 (new). On the plus side it performs very well AND is VERY easy to operate. I have the Scout and love it. Right now, I have to 10 meter, 15 meter, 20 meter and 40 meter modules for the Scout. If I ever decide to move to a "bigger" rig, the Scout will be moved to my car. On the minus side, the Scout doesn't have AM, FM, and can't receive all of the Shortwave frequencies. For me, this is no big deal. Also, if you purchase all the Band modules, the cost is about the same as some other rigs.

(2) ALINCO DX-70T, HF 100W/6M 10W $749.95 (HRO Price); DX-70TH, DX-70T W/100W 6M & EBC-9 $849.95 (HRO Price): A friend of mine has this unit and he loves it. The big plus is that you get the 6 meter band with this rig. There's also the ALINCO DX-77T, 100W HF $799.95 (HRO) Price, but I don't know what that unit is like. I heard that Tech-America is selling the Alinco DX-70T at a close-out price, but I don't recall the exact price.

(3) USED EQUIPMENT: This is one area where you need to do your homework. Are repair parts available for this unit? What to other Hams think of the unit? Having a fellow Ham who knows equipment might be a big help to guide you. If you could go over to the seller's house and have them show you the rig in action, you should be able to see if it's in good working order. Most Hams are honest and fair about their equipment, BUT there are some rotten Apples out there who will take advantage of others.

Remember to count all the costs; Does the unit come with a mike? What will the power supply to drive the unit cost? What other "extras" are needed to get it up and running?

I was able to put together everything for under $1,000. While I'm limited to 4 bands and I don't have a big tower or yagi; I still have fun working DX on the bands I'm set-up for. Just think how much better it will get as the sun spot cycle makes DXing even better. :-)

73,
Bob

I agree with all of this except the Cellsite transmits 45 khz above the
mobile transmit
frequencies. I would describe the available signal as a Image frequency ,
not a harmonic.
The IF frequency mixes with the Fundamental frequency and a Image is
produced.
This image is the fundamental frequency + or - a multiple of the image
frequency.

If you look carefully at the proposed Part 97 you see that the FCC has only listed two CW tests, element 1B and 1C. Furthermore, they solicit comments and/or recommendations on what the speed of those elements should be. The assumption is that 1B will be 5 WPM (why else would they give credit for a 5 WPM test?) and 1C will probably not be over 13 WPM. Wouldn't surprise me if they end up setting 1C at 10 WPM.

If you really want to see a good radio, (I think they're all good), try the
FT-51R!, Hard to beat!

clintbrad4d@earthlink.net wrote:

I just bought a Radio Shack HTX-202 on sale for $150 and it's an outstanding radio for the price. It's quality built and includes an AA battery pack which usually doesn't come standard with most radios. Now if it would just do extended receive...

I spent 9 years in europe and asia with the same problem. Motors will run at 1/10th of the
speed they run in the US. If it is a high current motor you may have a problem
with core saturation. Be sure the primary voltage is 220 volts and not 240.

Also, be cautious about the source of the voltage. Some of the smaller countries
don't have very good power regulation. As well as brown-out conditions there
are plenty of surge conditions. Sometimes surges can last for quite a few minutes or more. Sometimes you'll see voltage fluctuations like crazy.

Good luck.

I would recommend getting a used Kenwood TS 850. They are just about $1000
on the used market. There were many made so you could find one in
excellent condition. I have compared the TS 850 to many top end rigs and
the receiver (the most important part of a rig in my opinion) matches or
tops them all, including the Yaesu 1000MP (my other radio), the Ft 990,
The Icom 756 and the 775, among other earlier models. Get the most rig for
your money because you will grow into it. Personally, I would avoid the
new tiny hf rigs unless you were going to use it mobile. Best 73s and
welcome to HF! John, K7JY.

I cannot read or write. But, It is important to communicate - and to do that
you need to write as correctly as you can! Try useing software such as IBM
ViaVoice Gold and other tips.

If you can afford upto $1,000, you have a whole lots of choices in used market. What I recommend is, you get an used TS-830S or IC-735, and spend some money on your antenna, tuner, and other accessaries such as keyer. You can get a TS-830S in good condition for less than $450, and a IC-735 in good condition for less than $550. These two are excellent radios and still in demand in used market. I am using TS-830S and Drake C-lines (I have two sets), and I am really happy with them. I don't have IC-735, but this is a damn good radio and if you ask anyone who owns one, they will say the same thing. Don't spend too much on radios. I only buy used radios, and if you are a little careful in buying used gear, you can get a good deal and get a good radio.

You should remember that there are lots of things to buy beside the transceiver.

Good luck and hope you can make yourself and your wife happy.

1218. FS: ICOM IC-228H 2m mobile transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-12 00:00:00 UTC
From: Mark Abreu <abreu@perigee.net>
Message-ID: <6qthba$lue@enews4.newsguy.com>

I have an ICOM IC-228H 2m mobile transceiver I'd like to sell. I bought it from a Amateur radio operator a few years ago with plans to get my license and use it for packet. Didn't happen - it sat in my closet. I could use the money for something else right now.

- Selectable 5W or 45W power output

- Microphone with channel changing switches and numeric keypad on the back. I would assume this means it sends tones for working with patches.

- I have at least 2 power cables. I had planned to put one in a vehicle and one at home so I could use it at either location. I may have a 3rd sitting around here.

- I have the owners manual.

I haven't powered it up in years. The only thing I could imagine might be a problem is a dead memory battery in it. I'll power it up before I send it to see. According to the manual the battery must be replaced by an authorized ICOM dealer or service center.

I also have a car antenna to go with it, but I'm not sure how I'd ship it. If you help me figure out how to ship it I'll throw it in.

$150 plus COD charges.
abreu@perigee.net

Most graduate courses are heavily based upon report writing and class participation. You don't have to be the best writer or communicator to succeed in a graduate course. If you actively participate in class discussions and write to an extent that your instructor knows you understand the material, then you will succeed. I've found graduate courses to be much more relaxed and individually centered than undergraduate courses. It's not hard to get an A or B in one if you truly understand the material and are willing to put a significant amount of time and effort into it.

If one school won't accept you then you need to look further. I'm sure there are many graduate schools that would like to have you as a student, it's just a matter of finding one. Living in a rural area puts you somewhat at a disadvantage. If you really don't want to move, then you might consider driving 100 or more miles several times a week to attend courses. Some graduate schools offer courses on the Internet. Don't give up!!

Agree! (and I've had the VX-1R, Std 508A) and now have the FT-50, FT-51 and the IC-Q7A. The Q7A is really fun! VX-1R and 508A are still in the family (daughter, grandson), though.

a grand is a heck of a LOT of money for a transceiver. i suppose i would
ask these questions of you:

which rigs have you seen others using?

what kinds of bells and whistles do you REALLY want to use?

is that built-in automatic tuner REALLY necessary?

how often are you gonna use the rig?

have you USED any of the newer/older rigs? sat down in front of them and
twirled the knobs and dials?

do you want to maintain it (calibrate/tweek/retune) yourself?

can you deal with occasional transistor fails? do you want to?

what bands do you want to work?

what mode? CW, SSB, AM, RTTY, FM?

the older rigs suggested by VE3UVT are good choices (TS-830 and the Drake
C-line, tho the Drake R4B is a good choice for receiving). If you really
want to be budget minded, an HW-16 (75 watts CW on 80/40/15 meters) can
be had for about $60. it's an older tube-rig but gets you on the air.
you'll need a VFO for it, tho, as it was intended for xtal-only operation
for novices (VFO plug on the back for the Generals, etc).

> the answer you are apparently expecting!

Most shops won't uncase their monitor (it's a two man job unless you have a case-up frame,a nice machine shop project)for your edification and every other box besides a 1000 needs uncasing to change a battery.

The battery is generically available at most Battery Plus type stores.It's the only similar cell out there.IFR CS won't give out the generic number because it's not in MANMAN and theirs have IFR part numbers on them.

Old ones such as at hamfests are generally no good because they go bad if not cycled often.On the other hand,one cell usually dies first and so you can make two dead packs into one good one if you want to go to the trouble.

Anyone out there with a 1000 or 1100 should think about having any needed work on the beast done now rather than later. (hint,hint).There is also now available for dead 1000 attenuators a retrofit that puts the 1500 attenuator in: be advised it's $1500,though.A surprising number have been done.

Good luck,and don't key into those antenna or duplex ports....

>radio does not come with a cigarette lighter adapter. Can I simply
>buy a $5.00 "generic" lighter adapter from Radio shack as long as it
>has 12vDC and the right 3.5mm plug. The Icom brand is very expensive.
>

Probably. Just be sure the polarity is correct. You will get better
results (less noise on receive) if you connect directly to the vehicle
battery. Check the ARRL Handbook for details fusing the power lines to
avoid possible damage to the rig.

>Is this also true for a AC wall adapter too? I just want to be sure
>before I damage my new radio.
>

Most AC wall adapters do not have the filtering or regulation needed to
work successfully (except for recharging the batteries). You would need
a regulated 12 vDC supply for transmitting.

1227. FT-50 vs. VX-1R

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-12 00:00:00 UTC
From: detjason@aol.com
Message-ID: <1998081213381200.JAA09991@ladder03.news.aol.com>
Source record: 135106

I bought the VX-1R last week. After using it for 7 days, I can say, without any reservations, its the worst HT I have ever owned in 14 years. The sensitivity was terrible, it was impossible to program and the scanning options are limited (one band at a time).

Conversely, I am now in possession of the FT-50. Within the last 24 hours of owning the radio, I can perform all the functions without referring to the manual. The sensitivity is great. I can hear distant stations without removing it from my belt. The audio is superior. It scans all bands at once. AND, its 5 watts.

I think i'll give the VX-1R to my 4 year old nephew for a toy.

No, I am not interested in increasing our ranks regardless of quality.
I am interested in stablizing our HF demographics via the infusion of
a substantial number of younger operators (younger in this context
meaning younger than 63 years old), but I have no interest in reducing
the quality of operators.

Morse code speed testing has no correlation with quality (except perhaps
a negative correlation given the fact that Extras receive a disproportionate
number of NALs, IE they are our second smallest class, but have received
the highest percentage of violation notices of any class in the period from
1968 to the present).

Morse code speed testing is a strong disincentive for younger amateurs
to upgrade to a HF license. And it brings no regulatory benefit, IE it doesn't
address any regulatory concern. When was the last time you heard of a NAL
being issued for sending Morse too slowly?

I was wondering if anyone knew how to get the extended receive frequencies out of this radio - the Alinco DJ-180T. The manual specs state that the radio can receive 137-173 mHz, or something like that, but the manual never tells you how. Is it a mod or special key combination? If anyone knows and can help me I'd appreciate it.

Shane

TerryR The D523 is removed in my radio, it will transmit somewhere from 118 to 500. And it will not stay transmit near the two ends, even though if you hold the PTT down. I guess it's another way to protect the final from burning since it is way out of its designed transmit range. Now how do you open the cell band? I also own this particular radio, everything works fine. Except one thing I am not real sure about is the receive. Have you or anyone who tried to connect the radio with a mobile antenna or any antenna that has more gain than the rubber duck which came with the radio? I noticed using a connector of converting BNC to SO-239 in order to plug into my mobile antenna, it actually KILLS the incoming signals A LOT. At first, I was suspecting my antenna was bad (bad SWR), or my connector (adapter) was bad. But it was not the case at all. I tried the same process with different 2-meter radios, including the T7A, using the SAME CONNECTOR AND ANTENNA which I thought it was bad at first. THEY WORKED FINE! So I now have a unsolved misery going on here. I mean when you think about it, it doesn't make any SENSE! My signal will go as far and as good, but not incoming signals. Have you or anyone you know experience such thing? Or what is your suggestion on it? ---K.C.

1239. Re: FT-50 vs. VX-1R

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-12 00:00:00 UTC
From: Dan Grassetti <dangrass@pacbell.net>
Message-ID: <35D13B65.8653BE95@pacbell.net>
Source record: 135118

Interesting observations. I also own both the VX-1 and the FT-50, but find that each has it's virtues. In it's favor, the VX-1 is unbelievebly light and small, gets great battery mileage, and receives broadcast AM and FM. By comparison the FT 50 is more sensitive outside of the ham bands, most noticeably on air and 800 mhz., but within the ham bands the two are both pretty good. As I see it, there is no way that a radio as small as the VX-1 is going to have the same audio, the same transmit power, and the same sensitivity on all frequencies as a radio that is twice as big. I submit that the real value of the VX is that one can take it anywhere in one's shirt pocket...not so easy to do with an FT 50. Suggest that you keep both and use them for their respective purposes. To compare them feature for feature is to compare a Ford F150 pickup to a Porsche Boxster.....the Boxster handles better, but doesn't carry a lot of hay...

my two cents....

Dan

1245. FS: Yaesu FT-8100R, KPC3+, and more

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-12 00:00:00 UTC
From: rrickets@ix.netcom.com
Message-ID: <35d1bca7.9946159@nntp.ix.netcom.com>
Source record: 135124

*** REDUCED ***Icom IC-2100H 2 Meter rig w/ extended receive. Like new, never mobil, with all original docs and packaging $200 plus shipping.

SOLD Icom IC-207H Dual Band (144/440) never used mobil, with all original accessories and box. Mint condition. $300 plus shipping.

SOLD Yaesu FT-8100R deluxe dual bander, mint, with all original docs and packaging. A super nice rig, I've used it for base operation only, has never been mobil. This is a bargain at $420 plus shipping.

*** REDUCED*** Another Yaesu FT-8100R deluxe dual bander, mint, with all original docs and packaging. This one has been run mobil in my car, but doesn't show it at all, and works perfectly. $395 plus shipping.

All the rigs listed above have been used only slightly, and are in true mint, as new condition. They are all less than 4 months old. If you are in the market for extremely nice equipment, then here it is. As proof of this, I offer 5 day return privelege on the above items only.
---
(2) Kantronics KPC-3 Plus in mint condition, with all original packaging and docs. These have the current firmware level (8.2) and are ready to go. Includes power cable, and shielded cable ready to wire to your radio.
I'll ship it to you for $100 postpaid.

SOLD Motorola VHF power amplifier - 4 in/50+ out. This is an item I bought to use with the packet radio mentioned below, to boost its output to a more usable level. I haven't used it much, but it is clean and works fine. Tests using my wattmeter indicate 5 watts drive give over 70 watts out, 1/2 watt in gives 12 watts out. It was manufactured for 150-174 Mhz, but has been 'tweaked' down for 144-148 Mhz. About the size & weight of a typical brick amplifier, and uses 13.8 VDC. Input & output are SO-239 connectors. A bargain at $60 shipped CONUS

Van Gordon 1:1 BALUN New in the package, $12 shipped CONUS.

MFJ-1704 4 Position coaxial antenna switch, Excellent condition, used for receive only. Sells for $59 stteet price, I'll sell mine for $40 shipped CONUS.

MFJ-1702B 2 Position coaxial antenna switch, grounds in center position, mint condition, $15 shipped CONUS.

MFJ-8621 Packet Tranceiver, bought new for use as a dedicated EMWIN receiver. This was purchased as an experiment. I wanted to re-crystal for 150.435 and use it to capture EMWIN local feed. As it turned out, the wideband nature of the front end of this rig wasn't selective enough. But it works fine as a packet rig on it's stock freq of 145.01. So rather than fiddle with it any more I'm selling it, and will toss in the EMWIN crystal as well. Unit is in mint condition, working perfectly, with original docs and box, also including the extra crystal for those in a less rf-congested area. $85 shipped CONUS.

MFJ-1026 Signal Enhancing Noise Filter. Used briefly and then I fixed my noise problem so it's surplus. $85 shipped CONUS.

MFJ-956 Antenna Preselector, 150 Khz - 30 Mhz
I used this on my old general coverage receiver and retired it when I got my R8B. Tunes longwire or any coaxial antenna for RECEIVE only. It is a passive preselector, so it doesn't require any power. This is not meant for transmitter tuning. In mint condition with all original packaging, a steal at $25 shipped CONUS.

Diamond SX-200 SWR Bridge, in as-new condition with original docs and box. Bought an MFJ-259B (great piece of gear!) right after I bought this, and never used it. $70 shipped CONUS.

Terms are postal M.O. payment, I'll supply phone # and references if requested. Shipment will be via Certified Priority Mail.

Thanks and 73,
Ron Ricketts WA5VFA

: FT50 and claims that he picks up both sides of a conversation, but I
: only pickup one side. I'm not trying to be mischevious, by listening,
: but am wondering if it's just my FT50 that has a problem that would only
: allow one side of the conversation to be picked-up. Comments and
: suggestions would be welcomed.

The normal analog (AMPS) cellular system uses a 45 MHz split for full duplex on the phone so that you can talk and listen at the same time like a regular phone . What you are hearing is coming from the cell site and not from the phone, which transmits 45 MHz lower. Due to the way the phone system operates, some of the cell phone transmitted audio usually ends up coming back and is retransmitted from the cell transmitter. If it doesn't, then you don't hear the other half of the conversation. It has nothing to do with your radio.

$25.00 for shipping?? That tuner must weigh a ton, or else it's being shipped in a lead box...

Assuming it weighs about 10 lbs, it shouldn't cost more than $8 to ship it coast-to-coast by UPS ground (check their web site if you don't believe me...) -- even if it weighs 20 lbs, it'll only cost around $13...

Of course, if you take it to one of those "Mailboxes" places where UPS picks up, you'll pay almost double for the privilege of doing business there...

Please, no flames... Not trying to be the "price police" here - but anybody who would pay $25 to have that tuner shipped to them needs to have their head examined...

Marty;

I am shipping by a mail box etc because I live in the boondocks and
there is now reg UPS in this area. Also I am double boxing it which
makes the shipping box very big. They go by weight plus size. The tuner
weighs 18 lbs itself not including the boxes and packing. Shipping
weight will be about 25lbs.
I doubt if I could ship it from GA to CA with the xtra insurance for
that amount. I have done this many times and I know.

I'm curious about HT battery life for various HTs (e.g, FT50/51R, W32, TH78/79, & etc.).

It'd be great if HT users would post comments in reply; particularly how long battery lasts in receive only mode. We'll need to know what battery you're using, of course.

BTW folks I told the person who bought the MT-3000A I would send them a copy of the shipping invoice, and refund money if it came to less than $25.00. Not trying to rip anyone off on shipping charges, just want them to know it could cost $25.00 due to weight, size of dble boxing, and having to use mail boxes etc. I am not driving 60 miles to get to a reg UPS office. Also I always insure for the full amount (xtra cost) just to be safe. UPS only covers first $100.00

Problem:
Electrical noise generated by the fuel pump in my '97 Explorer XLT.
FWIW, the noise is interfering with an HF amateur radio transceiver
which I have mounted in the vehicle.

Info request:
I understand there is a telephone number at FORD that can be
called to obtain information (a technical service bulletin?)
for reducing or eliminating the electrical noise generated
by the fuel pump. Can somebody tell me what that telephone
number is, and/or who I may be able to contact about it?

Many thanks,
Sandy Lynch (W7BX)

and thank him for the great job!!!!!!
The circuitry in the programming cable is surface mount stuff, forget it.Here is a quote about Kenwoods cable:

For those of you who are fortunate enough to have purchased the TMV-7A programming cord and unfortunate enough to have purchased the 9pin to 25 pin adapter cable (because Kenwood chose to sell a cable that will only work with outdated PCs) you are ready to get down to programming.
Good luck

Is their anyone in Japan that has the schematic for the FT-51nd, I live in America but I bought the radio in Japan. On the way home I lost the schematic and I got one for Yaesu USA but I came to find out the design is somewhat different. I would be willing to pay for the duplication and postage costs if necessary.

Thank You,
Bryan Fields, KB9MCI

Hi,
I just recently got my ticket and am now looking to buy an
inexpensive HF transceiver. The XYL isn't to keen on me spending
great amounts of $$$. Therefore, unfortunately, I need to locate a good
transceiver for around $1000 USD. What would people recommend in this
price range?

Most 12v adapters sold by the radio manuf. allow enough current to pass
so that you can operate the radio without the battery attached. Most
designed for use with a HT have a 2 amp fuse. Some adapters include
circuitry to supply a current limited charge to the battery allowing the
lower voltage battery to be charged while using the radio. Some radios
have that limiting circuit built in. In some cases the 12v adapter has
voltage limiting circuitry to protect the radio from the occasional
surges that can exceed 15v for short periods of time, and in the case of
a regulator failure can soar to three times that level or more. Try to
obtain a circuit diagram of the adapter for your radio, or get access to
one that you can take apart and analyze the circuit yourself. Sometimes
the high cost of the adapter isn't solely due to the greed of the
manuf., but not often:-)

Most wall adapters are very small and the current it can supply is
limited by design (a core with a specific flux density limit). Therefore
it will charge a battery, but will not allow operation of the radio
without a charged battery attached. Most wall packs if left connected
too long can overcharge and damage the battery.

I would recommend that you examine the requirements, specs. of your
radio and make an informed choice that will limit the possibility of
damage to your radio.

When you understand the requirements of your radio and the design of the
chargers for it, and the battery type and voltage, you can, or with
guidance from knowledge help, home-brew almost anything for it.

The cable plugs into the data port of the radio and the serial port of
your PC. It works - No problems. I own 2 radios and now have them
synchronized. I like the software.

There is a mod for the V7 to open it up on transmit. You remove a resistor
and reset the radio. The mod works. I did not want to do it untill I got
the software because its such a pain to reload 80 memories!!!
But with the software it was a snap.

To remot control the radio you need to hunt around the Kenwood FTP site.
There is a scanned jpg there that describes turning on and off the remote
feature, turning on and of cross band repeat remotely etc.

I remember seeing an excellent web page that described the whole process
in detail. It does work.

For Sale:

Icom IC-751A, 160-10 meter (including WARC bands) AM/FM/SSB/CW
HF transceiver, 100 watts, solid state, 12VDC operation.

Come with: mobile bracket, mic, DC power cord and user manual.

The radio is 100% functional and is a 8.5 on an scale of 10.
Only a little dust and paint dullness because of age.
I'm a nonsmoker.

$600 + $15 shipping (US 48)

==========
Package deal:

Same as above PLUS:

UX-14 computer interface
FL-53 250 Hz CW filter
EX-302 Voice Sync board
RC-10 10 key pad for direct freq input
Factory service manual

Everything, $775 shipped (US 48).

Note: These above option items WILL NOT be sold separately until
AFTER the radio sells. If you want to purchase the radio and only
one or two of the options, we can work our a deal.

Terms: Send money order to my direct home QTH callbook address.
I will ship the next day.

The answer post by Terry Ryan has a lot of good information.

I would offer a few suggestions that I have worked out while biking and using a radio. Forget the amp. The increase in transmit range wont include an increase in receive range using a poor antenna. You will in effect be able to talk to people you cant hear. You would be much better off to improve the antenna. Much more distance for the buck, and much more time from the battery. I have the following antenna types that are home-brew and work extremely well. I built a rollup jpole that I tape to my flag whip (fiberglass) with incredible performance. I also include a 30' piece of RG8X and light nylon rope to suspend the rollup in the trees at night for greater range. I built a 1/4 wave ground plane that I can take apart to pack away for travel. I fabricated a bracket that can attach to the flag whip or other high object. This seems to work better than the jpole when in a deep canyon. The other antenna I bought because I couldn't come up with a design that worked as well. It is a Comet (I believe) SH95. I use it directly on the radio, or I mount it on my helmet with the following set up. A right angle BNC connector soldered to a ten inch circle of sheet copper, and a short piece of RG8X to connect the two. When I want to use the antenna I duct tape the copper sheet to my helmet. I works very well. I put the radio and gel cell battery in a Military Ammo can bulkhead connectors. It has even been under water (don't ask) with no damage to the radio. It works great except for the weight. I would like to find an Aluminum replacement.

When I studied the charts showing how little db gain resulted from increased power, and how much gain could be realized from improving your antenna, I chose the antenna route for cost / transmission factors. Depending upon the trip and terrain, I occasionally take the amp along for special situations.

>
I would be interested in hearing your distinct and positive suggestions

for:

1.) Bringing young people into amateur radio.

2.) Placing incentives within their reach which will suggest that extra effort is required for extra rewards.

3.) Structuring a license class system which rewards higher license classes with meaningful rewards, and an explanation of how more bandwidth can possibly meet the criteria.

I suggest you should forget "regulatory benefit". Surely you can see how the undertaffed and under-motivated FCC has no reason to consider "benefits" unless they reduce the amount of regulations they are charged with enforcing. The regulatory history of the last 20+ years clearly has shown this trend.

What is needed, in my opinion, is a way to find the magic that used to light up the eyes of young people in awe of being able to talk (without wires) - not just across town - but around the world! That was the lure of amateur radio - not the technology which is obviously strong in your argument. The love of the technology comes from the curiousity of "how it works" and "how can I improve it".

That is how amateur radio became the driving force behind the careers of many noted contributors to the state of the art - not the adolescent "wisdom" that this was the success path to follow in electronics or that higher education alone can instill this wonderment and inventive drive.

The goal at this time should be to keep amateur radio alive - not redfine it into extinction by internal arguement and strife.

Of course, more than on PLL could be used in a rotating pool. The next
one pre-loaded and locked up for the next frequency to be jumped to.

>That was my first hf rig, bought it 3 years ago, fine radio, great for
>cw with the filter installed, can't go wrong there.
>73's AA3NP

Hi Gary,

Interestingly, I just bought a TS-930S last Sat as my first HF rig. Have been doing some listening on it and had a problem last night, maybe you know the answer. Was listening on 20m and punched the 10m button when the freq jumped and the display suddenly started showing lots of lower-case r's in the freq, like 23rr5-.2r2 , and the scale indicated kHz instead of MHz. Perhaps the radio had some strange memory presets by the previous owner, I don't know. I didn't get the manual, it was from an estate sale, ordered one from Kenwood Monday.

Have you seen yours do this? Do you know how to clear the memory and restore normal function of the band buttons?

Thx and 73s, Mike

I ordered mine yesterday, mail-order, $579.00 backordered. Nothing
about walk-ins only. Besides at that price it would be worth the
drive.

Depends on what equipment you are talking about. If it has an AC motor, the motor will run slower. The expected output voltage from a DC power supply may be different. If the device has an AC fan for cooling, it may not run fast enough on 50 Hz to properly cool the device.

I bicycle a lot (century and double century rides) and almost always take my HT with me, mainly to communicate to my wife (also a ham) that I am ok, feeling good, etc. I have often planned on putting together a setup like yours but never got around to it. Let me tell you what I have been using for three years,which works well for me.

I have a TH-22A, the single band version of your TH79. I carry it in my pocket. This keeps if free from shock and vibration problems. I use a telescoping half wave whip antenna attached to the BNC antenna connector. I have a cheap ($1.50) Radio Shack earpiece that I use to listen. When I want to talk I take the radio out of my pocket and talk. (Like you, I don't talk a lot).

My cycling shorts are cloth and the TH22 is sometimes wet (from sweat) when I pull it out of my pocket but in three years I have not had a problem. Most of the time I have the telescoping antenna collapsed and only expand it when necessary. (Those half wave whips work remarkably well when fully extended). Sometimes I carry the alkaline battery pack, but I often get more than 5 hours listen time on the rechargable batteries.

Your setup seems ok except for the power amp business. I would worry about RF exposure with 50 watts and an antenna so close to your body. Also consider the weight of the amp and the 4 AH batteries.

As far as a water-tight case I don't have any experience with it. Out here in Southern Cal it never rains (or so the song says).

73s and enjoy your ride,
Tom

Source record: 135162

I eliminated the computer QRN in my rig using the MFJ-1026 Noise Canceling filter. I hung a 40' loop of rg58 on the wall behind the computer and hooked it to the noise antenna input of the 1026. Got rid of the noise and birdies as well. Rig is Ten Tec Corsair II and computer is Pentium 200 MMX in Class I mid tower case. Monitor Relisys 15" sitting right next to rig power supply. Computer sits about 2 to 3 feet away on same bench. Wouldn't be without the 1026 and it gets rid of some other noise too! Reduced an S5 to S7 noilse level to S0.

Another source of noise is not only the monitor, but the video card. I get noise when Windows boots up. I noticed it wasn't so bad when the computer first started as when Windows started. I disconnected the monitor and started the computer. About the time it would take for Windows to boot itself, the noise went from a flat line to S7. I've been told the problem is the video card. It hasn't been worth it to me to swap it out to make sure. Just another gremlin to make your day!

Good Luck and 73

1288. Comments On New FCC Proposals

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-12 00:00:00 UTC
From: DavidC <davidc@bit-net.com>
Message-ID: <01bdc59a$4894f900$4b8a92d0@davidc.bit-net.com>
Source record: 135169
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.policy

Well, I visited
http://www.fcc.gov/Bureaus/Wireless/Notices/1998/fcc98183.txt for the new
FCC Proposal and here is my first take (I preface my comments with ***, if
I didn't comment I generally agree with the proposal) ... comments?

73, DavidC AA1FA

IV. DISCUSSION

A. Number of License Classes

12. We have reviewed the various license classes and there appears to be
an unnecessary overlap
between the Novice, Technician and Technician Plus license classes • we
tentatively conclude that the Novice Class operator license no longer
serves a significant, useful purpose and should be phased out, with the
current holders of
Novice Class operator licenses being grandfathered. No new Novice Class
licenses would be granted, but
anyone currently holding licenses would be permitted to modify or renew
their licenses. In addition, Novice
Class operators would be eligible for examination credit for the telegraphy
requirement for any license class.

***What does this mean? They only get 5wpm credit and still need to pass
13wpm and 20wpm as currently
required (or 10 and 13wpm as I suggest) to upgrade, correct?

We seek comment on this proposal. We also seek comment on disposition of
the designated Novice bands.
Currently, other class licensees can operate within the Novice bands, but
only at reduced power. Given the
small number of new Novice licenses now being issued, if we were to
discontinue licensing new Novices, would
it be appropriate to delete the frequency limitations on Novices and the
power limitations on other classes of
operators using the Novice frequencies, so that Novices would continue to
be limited to 200 watts output power
but could operate using the Morse code anywhere within the 80, 40, 15 and
10 meter bands?

***Better to change the Novice portions to true QRP (less than 10 watts)
portions (all modes) to encourage the
development of highly sensitive and selective gear and excellent
operating technique. Such gear and technique

can be invaluable in emergency communications. OK on freeing Novices
to operate anywhere, but only in CW
portions of HF bands.

D. Privatization of Certain Enforcement Procedures

17. Pursuant to the Communications Act, the Amateur Auxiliary is
composed of amateur operators
who are recruited and trained by the Commission for the purpose of
detecting, on a voluntary and
uncompensated basis, improper radio transmissions, conveying such
information to the Commission, and
issuing advisory notices to persons who apparently have violated provisions
of the Communications Act
relating to amateur radio or who have violated any of the rules that govern
the amateur radio service
we do seek comment, consistent with the ARRL's underlying concerns, on
other ideas for improving our enforcement processes as they relate to
amateur radio. One possibility, for example, would be to encourage or
require persons bringing complaints of interference to the Commission to
include a draft order to show cause to initiate a revocation or cease and
desist hearing proceeding. We also request additional comments and
suggestions on how we could better utilize the services of the Amateur
Auxiliary, consistent with its statutory basis.

***1. The elements of proof need to be more clearly established.
2. Is a boilerplate copy of the Draft Order available online?
3. How are Amateur Auxiliary members selected?
4. Interference and illegal operation elements need to be tied closely to
proof elements and then to predictable and rapid FCC action when presented.
5. Is access to satellite triangulation technology to instantly identify
offenders a possibility?

E. Telegraphy Examination Requirements

22. The international Radio Regulations (Radio Regulations) that apply to
the Amateur Radio
Service require that all amateurs licensed to operate below 30 MHz
demonstrate their ability "to send correctly
by hand and to receive correctly by ear, texts in Morse code signals." The
Radio Regulations do not specify
any particular speed.

***Note: We are already in violation as we do not test sending.

24. In view of changes in the technologies that amateurs use to
communicate generally, and views
with regard to the Morse code requirement specifically, we seek comment on
all aspects of the Morse code
standards used in our examinations. Do the three levels of 5, 13, and 20
wpm remain relevant to today's
communications practices? Should we continue to have three different

levels, or should these be reduced to
one or two -- and, if so, what should be the required speeds? Were we to
reduce the required Morse code
elements, should we add elements to the written examination to ensure a
working knowledge of the newer digital
technologies which, in part, are replacing the Morse code? Or, should we
consider specifying the method of
examining for Morse code proficiency, such as requiring fill-in-the-blank
or copying one out of five minutes
sent, instead of allowing VEs to determine how to test for code speed? We
request comment on these and any
other issues related to our code speed requirements.

***Technician • None. (Add digital knowledge, add proof and punishment
elements for violations)
General Class • 10wpm (Add digital knowledge, fill in the blank code
test standard, add proof and
punishment elements for
violations)
Advanced • 13wpm (Add digital knowledge, fill in the blank code test
standard, add proof and punishment
elements for violations)
Extra -- 13wpm (Add digital knowledge, fill in the blank code test
standard, add proof and punishment
elements for violations, add all
requirements for Commercial Radiotelegraph license and
make this a bridge license from Amateur
Radio to Commercial/Emergency/Military Radio to
meet one of the purposes of Amateur
Radio, add some additional benefits e.g. increased
TX power on selected bands, permission
to use cutting-edge technologies on Extra portion
of Amateur bands not available to
others)

25. Additionally, in RM-9196, the ARRL requests amendment of the
amateur rules which allow
telegraphy examination credit for the higher telegraphy speeds to examinees
with a disability. Specifically,
the ARRL requests that the examinee be required to attempt the higher-speed
telegraphy examination before
examination credit is given pursuant to a doctor's certification. In
addition, the ARRL requests that volunteer-
examiner coordinators (VECs) be authorized to request medical information
from the certifying physician
pertaining to the examinee's disability. It should be noted that these
issues only remain relevant if we retain
the higher telegraphy speeds requirement, since if the requirement were
eliminated, a person with a disability
would not have to apply for examination credit. We tentatively conclude

that, if we do maintain the
requirement, neither of these proposals is an appropriate means to address
potential abuses of the physician
certification requirement. We believe that these proposals place an unfair
burden on examinees with
disabilities, and raise serious privacy and confidentiality concerns. We
seek comment on ARRL's proposal and
our tentative conclusion.

***Conduct random verifications of the physician certifications and act
swiftly and decisively against the physician
and licensee (loss of medical and radio licenses and stiff fines) so
that all will know the cost isn't worth the
benefit.

F. Written Examinations

26. In addition, a written examination is prepared and administered
to each applicant for an amateur
operator license in order to demonstrate to the Commission that the
examinee possesses the operational and
technical qualifications required to perform properly the duties of an
amateur service operator licensee. The
written examination for each license class currently specifies ten general
topics and the number of questions
for each topic that must be asked in an examination. A uniform national
database of multiple-choice questions
and answers is approved by the National Conference of VECs and is
periodically updated on a regular basis
so that all publishers and applicants have access to current materials.
This is accomplished on a purely
voluntary basis, without formal Commission involvement. Determining the
components of written
examinations was carried over into the VE system from those components used
when the Commission
previously prepared and administered the examinations. In light of the
fact that written examinations now
have been prepared and administered under the VE system for over a decade,
we seek comment on whether the
written examination requirements should be modified to provide VEs and VECs
additional flexibility in
determining the specific contents of written examinations, on the specifics
of what such flexibility should entail,
and on the advantages and disadvantages to providing such flexibility.

***The number and variety of questions should be increased until it becomes
impossible for memorization alone to be
a predictably successful means of passing the tests &#65533; as it is now
for most.

27. Specifically, we ask commenters to address whether the general
topics set forth in Section 97.503

of the Commission's Rules adequately cover the significant categories of information relevant to determining
whether an applicant has the requisite operational and technical qualifications to become an amateur licensee.
For example, does the current list of topics adequately cover current technology and contemporary amateur
operating practices? For those commenters who suggest addition or deletion of general topics, we ask them
to include the rationale underlying such proposals. In addition, we ask commenters to discuss whether the
required number of questions from each general topic should continue to be established by rule. For those
commenters who suggest altering the number of questions, we ask that they discuss alternative numbers or
percentages and the reasons therefor. We are particularly interested in comments from VEs and VECs
regarding any changes they would recommend, either individually or collectively, in the written examination
requirements on the amateur community generally, as well as on the amateur examination process specifically,
including how, if at all, they will affect the integrity of the examination and licensing process. For instance,
we seek specific comment from VEs and VECs regarding how modifications to the written examination
requirements would affect their ability to conduct examinations in an effective, efficient and expeditious
manner.

***I am an Extra Class Accredited ARRL/VEC. If the pool is increased dramatically it has little impact as it only
means a greater variety of possible tests could be handed to a given testee.
I believe that the number of questions about cutting edge technologies, proper operating technique (including
operating and technical methods for the avoidance of QRMing others), and the elements of how one is convicted
of violations and punished (this latter may plan the necessary fear of effective and swift punishment in the minds
of would-be abusers).
Any inconvenience to VE/VEC's is inconsequential compared to the health and longevity of the hobby and the
value of the hobby to education, emergency communication, and as a gateway to more technically astute people.

I am overwhelmed with the number of helpful E-mails! Thanks!
I have narrowed it down to the monitor, here are the steps I will follow per the many suggestions:
1. Ferrite on the video and ac lines connected to the monitor.
2. Check the internal shielding in the monitor to either add shielding, repair damaged
shielding, or to determine that shielding isn't practical. (methods suggested include
conductive spray on the inside of the plastic case and aluminum foil glued inside)
3. If shielding cannot be made effective then I will replace the monitor with one that has
MPR II shielding.
Thanks again! Will post the final results of the above steps. 73, DavidC AA1FA

>from all devices, including MB, and turn on the computer, if you still get
>it, then you know it is the PS.

Do be aware that most computer power supplies won't operate without a
minimum load. Turning the power on with absolutely nothing connected
may not be a valid test, as the internal oscillators may not be
running. A hard disk is an adequate load - but they contain logic
clocks so may generate RFI on their own. A good-sized power resistor
(maybe 1 ohm at 25 watts or so) hooked across the 5-volt supply should
start the supply without generating additional RF. If you can find
one...

[deletions]

>I have used resistive matching in a number of ways over the years.
>Knowing of such a thing, I qualified my statement iwth "in the context
>of what hams consider to be antenna tuners." :-)

Dean Straw once demonstrated to me a special case in which placing a resistor of the appropriate value across the feedpoint of an antenna *increased the efficiency of a system by decreasing the loss in the system.* As I recall, the system was a coax-fed dipole used at half or less of its resonant frequency--a system in which the added loss (in the feedline) caused by the impedance mismatch between feedline and antenna was substantial--on the magnitude of tens of decibels. Adding resistance--I believe we modeled the effect with a value between 100 and 300 ohms, inclusive--brought the mismatch-related feedline loss down profoundly, far more than offsetting the added loss attributable to dissipation in the feedpoint resistor.

Resistive loading is entirely appropriate technology if it achieves the desired purpose, such as making a rhombic or Beverage directional, or allowing rapid frequency changes without requiring the readjustment of frequency-sensitive matching networks. (Remember, the goal of a communication system is simple: The available local transmitter power must be able to achieve the desired SNR in the distant receiver, and the available distant transmitter power must be able to achieve the desired SNR in the local receiver. If adding a few resistors at the feedpoint of the local antenna allows the achievement of that goal at all frequencies of interest without resort to frequency-selective matching, the use such a technique is easy to defend and worth promulgating.) It's unfortunate that many radio amateurs continue to fail to realize that ARRL's expose of a "high-speed automatic antenna matcher" based on resistive loading sought to debunk not the technique but its misrepresentation.

1297. Re: Are radios better today?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-12 00:00:00 UTC
From: Joe <mitstoll@flinet.com>
Message-ID: <35D113A2.570E926D@flinet.com>
Source record: 135178

This argument applies to so many things today, cars being one example. I love my old Icom 32AT daul band handie from the 80s. It will be ten years old later this year. Though new handhelds have many more features, I much prefer this unit. For one, I am used to it, two, it is paid for, three, I have all the accessories for it. Love my older car too, for essentially the same reasons. Later this year I will be acquiring an older HF rig, which I have had several opportunities to operate. Whether or not I will grow to enjoy it over my newer, "better?" newer rig remains to be seen. Remember, it is all marketing! And these companies have to survive and sell products. That doesn't mean anything they make will necessarily be better, or last many more years than the predecessor models, but they must sell to survive.

Cheers!

Joe

Using older radios and enjoying it!!

Just my 2 cents worth opinion which might cost over $100.

I am using the MFJ-1025 and it does a superb job getting rid of my HP
monitor's QRM, which appears every 55kc apart (S9+) on every Ham band.
I was skeptical at first, but I am convinced. I think that JPS also
has a similar product.

No I don't think so, the FCC is telling us that there will only be one
code exam [5 wpm] so there will be no need for Tech Plus or Novices to
take anymore code exams.

the FCC will hardly act against bad hams do you really think that they
will go against the medical lobby in this country? No, they said it
well in their proposal, if there was only a 5 wpm code exam there
would be no need to consider or administer any medical waivers for
high speed code since there would be no high speed code exams.
What do you think the FCC wants to do?

I can't see that this is any different that getting a licence just to make contacts on HF (Voice, Morse, SSTV, whatever). In all cases, this is simply appliance operating (no knowledge of the internals is required). There are many Amateurs whose whole involvement in AR is swapping QSL cards and getting awards.

While such things are of no interest to me personally, I can't see that my (or anyone else's) preferences in Amateur Radio _Operating_ really have anything to do with what other people enjoy.

If they have a licence and as long as they do not break the regulations, it is their hobby and they have every right to do what pleases them, not you, not me nor anyone else. Otherwise, our interests would soon be dictated to by the whims of others.

Absolutely. A few years ago I was involved at work in HF SSB communications in which it was necessary to change frequencies instantly and often, without any time for retuning.
We were working statewide practice drill simulations of a massive earthquake relief effort and several divergent governmental and private agencies and groups were involved, one of which was the state National Guard, which had a HF SSB network statewide, with a 100W SSB transceiver and a B&W resistive-loaded folded dipole located at each Armory statewide. My function was to interface the Guard SSB net with a public safety FM net as well as work the statewide Ham Radio emergency net as needed, and handle traffic to and from the command operations center. My rig was a Kenwood TS430S, as this was before the time of the internal autotuner. We had been granted authority to use the broadbanded '430 on the NG HF net, which does not fall under FCC regulations.

The B&W antennas worked flawlessly. With the several frequencies loaded in the '430's memory bank, switching from net to net was a snap. Of course, signal

strengths were a little below that which would have been the case with discrete antennas optimized on each frequency, but whatever loss sustained was unnoticable. We handled SSB traffic statewide, at distances ranging from 40 to over 300 miles with no problems whatever.
Frequences ranged from 3.9 to 8.6 mHz. These emergency tests were repeated several times throughout the '80's and each time the B&W antennas worked exactly as needed.

It appears to me that sometimes in our zeal to make things work the very best possible we tend to inadvertantly engineer ourselves out of business. Circumstances should be the determining factor in selection of modes and gear, not optimal engineering factors when they are not necessary to the situation at hand.

Source record: 135194

HI EVERYONE,
I PURCHASED A UNIDEN HR-2510 AT THE FLAGSTAFF ARIZONA HAMFEST FOR $150.00. WHEN I GOT HOME I TRANSMITTED AND GOT THIS TERRIBLE GARBLED AUDIO COMING FROM THE SPEAKER. I TALKED WITH UNIDEN SERVICE DEPT. AND THEY SAID "IT WAS AN EARLIER MODEL AND THEY WERE FAMILIAR WITH THE PROBLEM AND COULD "REMOVE" THE TALKBACK FOR A MERE $59.00 PLUS $5.00 SHIPPING AND WAIT SIX WEEKS"! WELL, THE RADIO ISN'T WORTH THAT MUCH MONEY.
IF SOMEONE HAS EXPERIENCED THIS PROBLEM WITH A STOCK HR-2510, I WOULD REALLY APPRECIATE ANY HELP. I CAN'T IMAGINE WHY UNIDEN WOULD HAVE MADE A RADIO THAT WOULD DO THAT EXCEPT MAYBE FOR "CW" USE. BUT IT SHOULD BE DISABLED FOR SSB USE.

THANK YOU
PHIL DIAZ

Have you not checked the circuit? What is the grid bias doing? Remember the NAG
only switches the grid bias, so if you have burnt out some part of the circuit by using too much power input, leading to high grid current, you will possibly see this effect. The other more likely problem is you have ruined your output valve by overheating the grid. Just order a replacement, probalby only cost you $300 or so.

The 4CX350 is not designed to run any grid current. Putting 25W in and trying to use the mic gain to reduce power without the application of a level clipper or speech processor before the mic input stage is an action that ought to lead to a license downgrade.

1316. JRC alignment help please

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-12 00:00:00 UTC
From: David Rodman <rodman@acsu.buffalo.edu>
Message-ID: <Pine.GSO.3.96.980812063631.22647A-100000@hercules.acsu.buffalo.edu>
Source record: 135197

I have a JRC JST-245 transceiver. I have owned it for years, but never used it. Lately, I decided to install all my CW filters and run the radio. I notice that the 500 Hz CW filter is NOT centered in the passband for proper RTTY reception. One can center the filter by rotation of the "PBS" control. I suspect the 300 Hz is probably not centered either. Usually, one would adjust the BFO frequencies for such alignments with a frequency counter on the various test points.

Questions:

1.) Does anyone have a service manual for the JST-245 who can transfer or FAX the procedure to me on this alignment?
2.) Does anyone have a phone # where I can get an English speaking person who can discuss this issue with me at the JRC company, hopefully in the US.

Thank you. 73,

It appears that the Q7A does not have this feature. Visit the IC-Q7A Comments page at http://www.geocities.com/ResearchTriangle/Lab/2178.

>I've got some serious QRM getting into my ts690sat from my PC ... help!

You need to figure out what part of the computer is causing the interference. If it's "birdies" spread at the same distance all over the band, your problem is probably the monitor. If it's wideband hash all over the place, it's something else.

You need to systematically disconnect all external devices from the computer until you figure out what the noise source is. Start by turning off the monitor; I'll bet the noise goes away.

If it does turn out to be the monitor, you can try split ferrites on both ends of the monitor cable as well as the power cord for the monitor.

You'll probably just have to learn to live with it, though - you'll find that if you change the refresh rate on the display (through Windows control panel), you can move the birdies to different parts of the band, which may make it more tolerable for you.

Get a copy of the ARRL's "RFI: How to Find it and Fix it" - plenty of good troubleshooting tips and solutions.

TerryR The D523 is removed in my radio, it will transmit somewhere from 118 to 500. And it will not stay transmit near the two ends, even though if you hold the PTT down. I guess it's another way to protect the final from burning since it is way out of its designed transmit range. Now how do you open the cell band? I also own this particular radio, everything works fine. Except one thing I am not real sure about is the receive. Have you or anyone who tried to connect the radio with a mobile antenna or any antenna that has more gain than the rubber duck which came with the radio? I noticed using a connector of converting BNC to SO-239 in order to plug into my mobile antenna, it actually KILLS the incoming signals A LOT. At first, I was suspecting my antenna was bad (bad SWR), or my connector (adapter) was bad. But it was not the case at all. I tried the same process with different 2-meter radios, including the T7A, using the SAME CONNECTOR AND ANTENNA which I thought it was bad at first. THEY WORKED FINE! So I now have a unsolved misery going on here. I mean when you think about it, it doesn't make any SENSE! My signal will go as far and as good, but not incoming signals. Have you or anyone you know experience such thing? Or what is your suggestion on it? ---K.C.

I don't know what your name is and your call. But since you are local like I am in Philadelphia, I think your feedline is too long. Although you are pushing 5 watts out, you have to remember you lost a lot of that UHF signals through a 27 foot of RG-58 cable. My first recommendation is change your feedline as soon as possible. At least to RG-8, I know it's expensive, but that's one of better choice you have. Another option or do this one too: is to build a cheap 440 beam. Radio Shack has a book which is a purple cover titled ANTENNA. There's a project on the back that teaches you how to build a 6-element 440 beam. What repeater do you hang out, teen-ham? Let's talk on air. BTW, What's your call? ---K.C.

I have a Lafayette HE-43C tube-type CB radio that I bought as-is through an eBay auction (yes, the price was right; I would have paid the same amount at a swap meet -- $20). The power cord and mic are missing, and it didn't come with a manual or schematic. I'm looking for copies of the original owner's manual, factory service manual, Sams Photofacts, whatever you might have. Will pay reasonable price for copying and postage. At the very least, could someone tell me the power and mic connector pinouts? I'm hoping to get the baby working and convert it to 10 meters for a-m operation on 29 MHz with the other BA users.

I was cleaning out my shack this weekend and found some old Byte magazines from the early days of personal computers. There are some from '77, then complete from Dec. '78 through '84. Are there collectors of old computer magazines? They are free to anyone who wants to pick them up (Southern Michigan). Also, I scanned the Usenet groups to find any other groups to post this, and couldn't find any obvious ones. I'd appreciate learning of any other groups that may be pertinent.

Thanks!

Norm,

I like "Log-EQF" myself. Here is the address of the gentleman that
made it.

Tom Dandrea, N3EQF
396 Sautter Drive
Coraopolis, PA 15108-9244
USA

(412-457-2584)

I don't use it for casual logging. I use it mainly during the various
contest's I like to play in. I believe he can send you, or tell you
where to download it from, a freeware version for evaluation.

If you need any further help, send me an e-mail.

Source record: 134910
Body handling: HTML body converted to readable text

Ron;

Several of us bought new 706MKII's March 9-10 and were to receive the following free items under a promotion:

OPC-581 sep. cable
UT-106 DSP
"available in April" from Icom America for buying Before Mar. 31st.

My cable arrived last week.!!!!!!!!!!!!!!
The DSP UT-106 arrived Monday, AUGUST 10th. !!!!!!!!!!!!

AND THEY ARE DOING IT AGAIN!
So if ur thinking of buying under the "Now to Sept. 30 1998" promotion, BEWARE.
(I have FAXES stating my DSP would be shipped by July 18, when FAXED in June.
So just a big screwup.
It has cost Icom an IC-775DSP. Enjoying my Ten-Tec Omni VI PLUS with five filters, thank you. And have not decided if it will cost them two-three IC-2100 FM xcvrs.(

If U need something that small, wait til the Yaesu FT-100 competition comes out end of August. (Probably why Icom America started this again til Sept. 30th !!)

>I've been looking to buy one of the IC-706 MKII units w/ DSP; Since
>I'm outside the US at the moment and can't seem to find any reviews
>on-line, your comments pro and con on the unit would be appreciated.

Just my comments.

73-enjoy your stay in Ireland.

Source record: 134920

I guess I answered my own question. Apparently my computer loaded the
old Soft990 program instead of the new FT-Manager for some reason when I
clicked on the icon. I deleted the old Soft990 program and got the new
FT-Manager for Windows95/NT to load. It looks like a great program and is a
full functioning but time limited demo. It does have a graphic bandscan
function where it takes maybe a fraction of a minute to scan a portion of a
band and give a graphical representation of signal strengths in the spectrum
scanned. Then you can use your mouse to go to the "blips" on the screen to
check out the action on the band. It will work with a lot of late Yaesu
rigs. Check it out at
http://ourworld.compuserve.com./homepages/f6dex/FTmane.htm --- Steve

1339. BC150 versu Q7A

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-13 00:00:00 UTC
From: Herb de Nova <please@no.spam>
Message-ID: <6qvvuqoes1@camel19.mindspring.com>
Source record: 134922

For scanning purposes, how do the Sportcat BC150 and Icom's Q7A compare? I have an SC150, and it's generally okay, but suffers from poor design, I think (it's an older model). For example, it's not unusual to have NOAA weather stations & police and rescue repeaters covered up by signals at the fundamentals. Sensitivity could be better, and--of course--it's lousy for television sound.

I've been considering getting a better scanner and a less bulky handheld for 2 meters (I have an old Santec that weighs a ton) for bicycling. But when the Q7A came onto the market, the prospect of killing two birds with one stone looms.

How do the 150 and the Q7A compare for scanning purposes? Is the Q7A going to be better, worse, or about the same as the SC150?

>program out there?(time contacted, qsl'ed or not, call sign, etc...all
>that good stuff)
>

Well, I use LOG-EQF. I think it's the most straight forward program out
there. I looked at about 6 different ones. It imports almost all other
logs including CT logs.

I use CT for contesting and then import the log into EQF.

You can find a demo at: http://www.itis.net/eqf

I also would like to say that when I had questions about the program before
I paid for it, Tom N3EQF answered my emails in about 10 minutes each time.
That was impressive. Good luck

Any serial number after:

8G05xxxxx

I have 8G051xxx and it works fine. Yaesu sent me a message indicating
anything after 8G05xxxx has the CAT fix.

If you rig is earlier, you can contact Yaesu about replacing the CPU ...I
believe they will do it free, if you arrange to send them the rig. Contact
them first. 73

The important thing here, recognizing that things aren't going to change, you will always be judged for things that don't relate directly to the issue most important to you, is that first you recognize that you have a problem, which you have. Second that you continually work to improve yourself in that area. Again I urge you to enlist anyone you can get to help you. Quite often outside help and suggestions can work wonders if you are serious about improving. If you write a letter, first have someone else correct it and then you study the correction and rewrite it yourself. Keep a copy of each and study your improvement folder often. It works. I am living proof of that.

pat@nospam.com writes:
>Can anyone tell me the difference between an Yaesu FT-50, FT-50R, and
>FT-50RD?

FT-50 is a shortened "generic" name that describes the whole family.
FT-50R is the basic radio. The "D" suffix means the radio comes with
the "deluxe" FTT-12 keypad with voice recording, CTCSS decode, and
I forget what else. You'll also see an "H" suffix indicating that
the radio comes with the 9.6 V battery that gives 5 W RF out.

For your $1000, you'd better be factoring in an antenna, coax, tower, rotator and lightning protection. Of course, the tower and rotator are optional if you will be using a wire antenna.

Stay away from the TS-8XX and TS-5XX radios (as well as other pre-80's radios) unless you fully understand the art of dipping and tuning of tube rigs. Although they are fine radios, most new hams are unfamiliar with those techniques so they are best left to the old timers out there. Also, they require retweaking every time you change frequency a little bit.

If it were me, I'd settle for a used Kenwood TS-430S or Icom IC-735 (oh, you'd better figure on the price of a 12 volt supply for those radios). Those "all solid state" radios require NO tweaking when changing frequency (unless you've also purchased an antenna tuner). If you get a newer rig with a built in tuner, you can even avoid THAT inconvenience. Plus, you get memory channels for jumping back to an old favorite.

Hope this helps.

I find that spell checkers and word processors have worked to my detriment causing me to make more spelling and grammatical errors.

I think you will do fine. I see your biggest challenge as being located in a rural area where the opportunities are fewer. There is nothing wrong with that. I have moved to a "slower" town myself. The job search can be very frustrating when you read all the postings and find that everything you are qualified for, or would like to consider, requires you to join the rat race.

Have you considered doing contract work for companies who cannot justify having salaried technical representation in your region? Look around and see who's working on what. How about a rural electric utility or co-op? The phone company??

I was once offered a job while having a drink in a bar on a carribean island. Turned it down, missed paradise. Very stupid!!

There is a saying, in blind mans world, one eyed man is king!

I am non-degreed, "mathematically challenged" getting along in the hi-tech world with my pocket calculator!

KAM version 7 or later with software/cables
6 meter radio dedicated to 6 meter and allmode

2kw or better tuner with wire/and dual coax outputs
with meters

I can be dealt with, if you have trades, let me know

km5rt@ticnet.com

Pursuant to the same laws that govern the fax spammers,
unsoliceted mail will be forwarded to my collection agency
for a $50 fee per message. This modest fee recovers the
time lost reading the meaningless message, the brain time
to figure if it was meaningless, and the time and effort that
it took to kill the OFFENDING message.

If you like CW use it! If not, learn it long enough to make the test then do whatever you want. If you will not be doing CW on the ham bands, 13 WPM is probably fast enough for the test. 20 WPM will only get you 75 khz of space for voice for MUCH time and effort...you weigh the effort to gain ratio...it is YOUR choice If you are licensed, use whatever bands you are allowed to keep the agencies and private companies from trying to steal them.

I am presently active on.
80-10 meters ssb voice and fm where allowed, 6mssb,6mfm, 2mssb,2mfm packet,2mfm simplex,220fm,432ssb,440fm,440fmpacket and whatever I can get my hands on.

It isn't necessary to use a PLL to do this. You can use Direct Digital Synthesis (DDS) which can make this sort of change without even losing phase continuity. One system I worked on produced wide band phase continuous frequency sweeps using this method. The scheme isn't new, as it had been in use since at least the late '70s, early '80s.

1368. Re: Newbie Cigarette lighter question.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-13 00:00:00 UTC
From: Alan Glashan <alan.glashan@dundee.ncr.com>
Message-ID: <01bdc695$8e11cd40$af014999@user>
Source record: 135024

I damaged my 1st TH79e from presumably excess voltage (or perhaps a long voltage spike) from the car cigarette lighter. The TH79 was connected up direct from the Cigarette socket to the jack on the side of the radio. (Many months later I discovered that the car's alternator/voltage regulator was faulty.)
I count myself very fortunate that the local dealer (who I had dealt with for many years) exchanged it for another TH79 under warranty. I then also bought the recommended DC power lead which I had always considered a waste of money until that point!

At the very least drop the voltage to the radio, as handhelds do not require 12V and above to give their 5W out. The DC volts above what ever is required for full RF o/p (about 10V probably?) is lost as heat in the regulator. Loose these 3 or 4 Volts somewhere other than the roasting hot radio when it's on 5W tx!

>
> Thanks
> Mike (WA3O)

No, but:

I have a pair of 15M Mizuho MX-15's with the mobile mounting rack, external (extra) VXO, and 15W Linear Amplifiers. They have the optional Noise Blankers (these really work on qrm!!). Included are Mizuho speaker mikes, Xtal sets for most of the 15M band, and Gates lead-acid (sealed) 5AH 12V batt packs 2-1/2" x2-1/2"X5" (6 "D" size cells), & Manuals.

This set looks like a mini-mini big time mobile rig, about 5"X5"X 7-1/2"(deep). I used to talk regurlarly from Salt Lake City, Ut. to So Calif., East Coast, Africa, Carribean, and Mexico with a Bilal 15M ant (about 3"X4"X 18"(long)) mounted on my tv ant mast. always got 5X9 reports. Just like talking on the telepnone.

Thanks for the input, but it doesn't help much. Gates probably makes a bunch
of different packs. I'm not
familiar with any of them. I don't understand why everyone
assumes I know what the battery for some other service monitor looks like. If
I knew
that, I'd probably recognize what I needed.

Still lookin'

Good, actually excellant! It has a very good receiver and the I.F.
DSP really works. I like the good audio (RCV & XMT) and software
features like the memo pad and built in keyer and 100 watts on 2 meters.

Icom IC-2100H 2 Meter rig Runs 55W, never mobil, with all original
docs and packaging $200 plus shipping.

Yaesu FT-8100R deluxe dual bander, mint, with all original docs and
packaging. $395 plus shipping.

All the rigs listed above have been used only slightly, and are in
true mint, as new condition. They are all less than 4 months old. If
you are in the market for extremely nice equipment, then here it is.
As proof of this, I offer 5 day return privelege on the above items
only.

Kantronics KPC-3 Plus in mint condition, with all original packaging
and docs. These have firmware level 8.2 and are ready to go. Includes
power cable, and shielded cable ready to wire to your radio.
I'll ship to you for $100 EACH postpaid.
(Two units available)

Van Gordon 1:1 BALUN New in the package, $12 shipped CONUS.

MFJ-8621 Packet Tranceiver, works fine as a packet rig on it's stock
freq of 145.01. Unit is in mint condition, working perfectly, with
original docs and box, $85 shipped CONUS.

MFJ-1026 Signal Enhancing Noise Filter. Used briefly and then I fixed
my noise problem so it's surplus. $85 shipped CONUS.

Diamond SX-200 SWR Bridge, in as-new condition with original docs and
box. Bought an MFJ-259B (great piece of gear!) right after I bought
this, and never used it. $70 shipped CONUS.

Terms are postal M.O. payment, I'll supply phone # and references if
requested. Shipment will be via Certified Priority Mail.

Thanks and 73,

Go down to your friendly auto parts store and ask for a condenser. If
they ask for the make and model of vehicle, mumble something about
a 57 Chevy. What you'll get is a metal cased capacitor with a mounting
tab, and a single wire lead. Bolt the mounting tab to the body as near to
the fan as possible, and connect the wire lead to the fan power lead
(right at the fan).

Or you can go to an electronic parts store and ask for a 0.01 disc
ceramic capacitor. Connect one lead to the body, the other to the
fan hot lead (right at the fan). Or buy a "feedthru" capacitor, ground
the body of the capacitor, and connect the fan hot lead to one terminal
and the fan to the other, IE splice it into the hot lead.

Any of these methods will work. The secret is to attach the capacitor
as close to the source of noise as possible, and connect it to a good
body ground using very short leads. If the capacitor alone doesn't cure
the noise, install a choke in series with the hot lead too. A 100 mH choke
from Radio Shack will do.

The fuel pump RFI is pretty common with many Ford vehicles, one I experienced going back to my 1988 Taurus. I fixed that one with a bypass cap, BUT I recommend getting the factory-authorized (and free under warranty) fix installed instead. On the Taurus I could reach the leads under the back seat...not so on the Explorer. It likely requires dropping the tank, and is "vetted" for not causing sparks in an inopportune place.

There is a TSB on this and if you can give the dealer that number it tells him the part to get and how to install it. If you cannot get the TSB via www.alldata.com you might try the ARRL as they've published the information in QST back some years ago (I recall seeing it in 1988 right after I modified my car myself). I had another user send me the TSB before I picked up my new (then) 1997 Explorer and the dealer installed it before I even had a radio put in. No fuel pump noise at all.

Now, there IS a GEM computer signal that shows up on many Fords, as well...drifts around the 145 MHz range. No fix for that one, but not a problem unless you use a repeater in its signal range.

Rick, the FT-901DM is an excellent radio but bear in mind this: The FT-901DM and the newer FT-902DM have 7, yes, seven, mechanical relays installed within them that are prone to fail. These relays are not very expensive, about $6 each but it is quite time comsuming to replace them all. IF you were to send this radio to Yaesu for service, they would, by default, replace all relays and align the radio. Cost: expect a $300+ repair bill. So, a $450 radio can quickly become a $700+ investment.

<rant mode on>

Have you called IFR and asked them for the generic Gates or industry part substitution number (if one exists)? Have you requested a Gates catalog that has some pictures? Do you have the manual set for your IFR (which might have technical drawings)? If not, then you aren't working as hard to help yourself as you seem to expect others to do.

Have you tried contacting local radio service shops that might have one you could look at? Chances are that SOMEONE within 20 miles of you has an IFR 1000, 1200, 1200s, 1500 or 7550 you could look at.

I fail to understand why everyone's answer to your request isn't "good enough". I thought the physical description was good enough to understand why there were two bolts there (that WAS your question after all). Take some measurements, do a drawing, and keep it in your wallet! Do you expect a description so detailed (or pictures!) that you can recognize a dead battery pack at a ham fest so you can buy it for $1.00? If so, then ASK for it that way.

You are not likely to find such a specialized battery pack and cover just lying on a table at a ham fest or on a shelf at Radio Shack. You are also unlikely to find a web site with pictures and a complete cross-reference guide.

When the answers you want aren't available, you go to the source, look elsewhere, or modify the question instead of whining about it. We all like to help, but few enjoy being told their effort to help isn't good enough. I think the original question wasn't nearly good enough for the answer you are apparently expecting!

I'll second this opinion. I have had a TS-850 for four years, and it is
a very nice rig, particularly the receiver. At roughly $1000 on the used
market, it's one of the best deals out there.

If you need to leave some money for other items, and you don't mind a
ham-band-only rig, the TS-830 is a good choice. I have one, and use it
quite a bit. I wouldn't part with it (or with my TS-850).

From: Jeff Kilgore <kilgore@dev.tivoli.com>
Message-ID: <35D2FCC6.6C3D42D2@dev.tivoli.com>
Source record: 135051

But that's actually one of the nice things about the HTX-202. By not attempting to serve double duty as a scanner, the performance on the 2-meter amateur band can be optimized with tighter filtering. I've owned a few HTs with extended receive capabilities, and I was not pleased with receiver performance of any of them. The HTX-202 is my second-favorite HT of the ones that I have owned. My old Icom IC-O2AT was my favorite; I wish I hadn't sold it. But the HTX-202 is a close second IMO.

Hi Neal,

I've owned the TH-79A for three years now. I've found the batt life to be great! I'm only using the the stock 6v 600mah pack with it, but it seems to be enough. Infact, I just ordered two more of them today. It's really the longest lasting "low power" batt I've seen for an ht. I can usually get four to five days worth of receive out of it, and last year during a ARES exercise, I was able to get two days with a lot of transmitting tossed in there. I did top the pack off for 5 hours, but still, it's pretty good. A lot better then the packs that come with the HTX-202 and the old Yaesu FT-811 I have over here.

1400. FORSALE - MINT Kenwood TS-520S + VFO-520S, great starter rig

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-13 00:00:00 UTC
From: jpl@hoserve.ho.lucent.com
Message-ID: <6qvhfe$7sj@nntpb.cb.lucent.com>
Source record: 135056
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,nj.forsale

I have a mint Kenwood TS-520S plus the optional matching remote
VFO-520S that I would like to sell. In my opinion, the 520
and 520S are some of the best rigs around and would make a
fantastic beginner station or a great backup rig.
The remote VFO is a wonderful option to have and gives
the capability to either run split frequencies or to flip-flop
between two frequencies.

For any novices not familiar with this radio, it is all solid state
(discrete components, so its very easy to repair if ever needed)
except for a tube driver and a pair of very
robust 6146 tubes as the finals. It has a builit in power supply,
but can also run off of 12VDC with an optional DS-1A
DC-DC convertor (not included). It also has connections for the
Kenwood DG-5 digital display.
It covers 160,80,40,20,15, and 10 meters in CW and SSB (upper and lower) modes.
The receiver section is excellent and I always get excellent audio quality
reports. Many folks say that these older Kenwoods are some of the best
sounding rigs on the air.

This rig also has the optional 500Hz CW filter
installed (genuine Kenwood option).

The price is $400 firm + shipping. You might find one for a few $ less,
but NOT is this great condition.

options
>are limited (one band at a time).

Programming is just a matter of getting used to having less than a full DTMF keypad with triple functions in each button, remeber the FT-23? Nobody complained back then...I think we are all getting to comfy.
With ADMS software, you can do this little trick: check the 'Allow any band' button (or was it in the .ini file?) and then you can program any frequency from any band into any other band, except broadcast MW.
For example, in VHF band, I have 145.65, 166.55, 453.95, 79.6, and 85.35 MHz, and it will scan no problem.

>The sensitivity is great. I can hear distant stations without
>removing it from my belt. The audio is superior. It scans all bands at
once.
>AND, its 5 watts.

So, but the battery doesn't last that long. And, my VX-1 is about 10 times as sensitive as my FT-50 in the 85MHz region, even with the stock antennas.

73s, and have fun, you can do it with both radios. I like the punch and heavy-duty feel of the 50, and also like the size and weight of the VX-1.

Comparing them is like apples and oranges.
The VX1R was released to the ham markey, because Yaesu needed
something FAST that would get lots of buyers (they did real good too).
As being an owner of both, the FT-50 is a far superior radio, but it
is lacking some MAJOR parts.
The VX-1R is a good radio if you want a scanner. If you want a ham
radio, forget it. The new Icom is really slick, and is lots better
than the VX-1R.

One day a local farmer came across his neighbor weeping
bitterly. He asked what the matter was. The other farmer
blurted out that he had been training his horse to do the same
amount of work but cutting the feed down slowly, day by day.
Just when he had trained the stupid horse to do all the work
with no feed, the horse dropped dead.

You can't have it both ways.

The pros know this, and such "cross-banding" causing
interference to public safety communication has one of the
highest enforcement priorities.

>2) Just as commercial interests are able to get attention focused to
>allow illegal FM pirate stations from blocking their signals, we should
>have the same invesigational power.

"Commercial interests" do not have any greater investigative
(legal) power than anyone else who can afford to hire the
necessary engineering and legal talent. Believe it or not,
this "talent" exists in the amateur community as well (many of
the pros are hams).

>If it requires some type of
>"professional bounty hunter" to afford the equipment/legal status, then

Bad policy if either gets a "slice of the fines". Opens the
whole business to abuse.

McPaul6 wrote:
>
> Is it posible to modify the newest Ft-50's. I read somewhere that you can
> perform the mod using the Yaesu software only. Has anyone done this on the
> latest version of the radio? Where can I get detailed instructions.

I have performed the mod with my older "hardware moddable" ft-50. I
downloaded the instructions on how to modify from one of these groups a while back.
But the instructions are somewhat confusing and I had to read it several times before
I figured it out.
Because everyone seems to want to know how this mod works, and how to do it,
I'm going to re-write the mod instructions for everyone and post it once a week for a
month or so.
That should be done tonight or tomorrow.
In the mean time, you need to get the computer interface kit for the radio,
and a hex editor.
My personal favorite hex editor for Windows is HEdit. You can find a copy
with the ftp search engine http://ftpsearch.ntnu.no/ and searching for "hedit.zip".
It's small and simple and wirks with Win 3.1 for those with '95 phobia.

A final note about the software mod, if you reset the radio with the keypad
reset, you don't loose the mod, it acually survives the reset.

If your 202 is displaying ER2 during transmit and you're using the included antenna and battery, then it probably needs service. I bought a new 202 earlier this week and 4 out of 5 transmissions caused the radio to lock up and display ER2. I took the radio back yesterday for an exchange and, guess what, no ER2! The salesman tried to point the finger at me and suggested running the rig at low power or buying the fancier telescoping whip that they sell. IMHO I told him that there's no reason why a 202 can't run flawlessly on high power with its standard battery and antenna.

No, read: If we contact out elected officials and demand that they force the FCC to do their job or cut their bureaucratic staff they will do it! We should be involved in the policing process to keep it "honest", and at the same time we should volunteer to pay a regular re-licensing fee to help cover the cost of more aggressive enforcement. 73, DavidC AA1FA

I'm with Casey & Don. Tuning up a tube rig really isn't that hard.
(I thought I might have forgotten after 10 years of solid-state gear,
but then bought an amplifier with a 3-500 & it all came back to me<g>)

It *is* a bit more trouble to change band or go from CW to SSB. I
wouldn't worry about it unless you intend to do some serious contest
operating - but even then, people contested seriously with tube rigs
for many years. You can always stick index cards behind the knobs &
mark the settings on them. I never had to retune when QSYing within a
band segment. (i.e. from 3510 to 3575, or from 14175 to 14275)

The TS-520, TS-530, TS-820, and TS-830 are all excellent choices. If
you have the choice, go for the 530/830 as they cover the WARC bands.

>If it were me, I'd settle for a used Kenwood TS-430S or Icom IC-735 (oh,
>you'd better figure on the price of a 12 volt supply for those radios).

These are also decent radios, though as Randy mentions you have to
factor in the price of a power supply. (tube rigs usually include a
supply) You could use a deep-discharge marine battery & a car battery
charger as a power supply - ugly, but cheap.

I like the 706MkII.

I have the DSP module (paid for it, since my 706MkII is an early one).
Not wonderful, but worth what I paid for it.

Hmmm..surprised that is legal (but it may be). In CA I believe you have
to hold the call (FCC paper) to get the plates.

FWIW:
in 1952 when I received my call and license Part 97
was about 10% of what it is now. The rules, as constructed
today outlaw all modern forms of communications and most
experimentation.

Packet is firmly stuck at 1200 baud. Ask any 14 year old
about 1200 baud and you will be laughed at.

Sometimes I think that ham radio is firmly stuck in
the year 1936(at least some would like it that way).

Spectrum is just too valuable today to give it away
to the folks that have turned to stone sitting in their
chairs looking straight backwards.

> would be no need to consider or administer any medical waivers for
> high speed code since there would be no high speed code exams.
> What do you think the FCC wants to do? W4SCO

The FCC need only refer the cases to the medical boards, and the media, the rest will sort itself out -- the physicians lobby is easily overwhelmed by public outcry against frauds and incompetents -- and the outcry is on the upswing (though it is the socialist Clinton failure of managed care that is really hurting people ... another topic for another group ...).

The FCC wants to do what all bureaucracies want to do, take the course of least resistance. They will evaluate the input of those who care enough to respond, they will consider the desires of the commercial sector (those who sell gear, and those who want our bands), they will consider the emergency/technology issues, and they will decide based on what is likely to get the job done while keeping the squeekiest wheels greased!

I don't mind if they eliminate the code ... if they replace it with restructured exams (read: near-impossible to memorize and pass, must-know-the-stuff!) that will perform a similar serious-candidates-only-need-apply function that the code has provided in the past.

But they still must figure out a way to perform the enforcement function that their "charter" requires of them or they are just rearranging the chairs on the deck of the Titanic -- Ham radio as a means of civilized and valuable emergency communications is dead, and soon, if we don't get protection from the anarchists. Nuff said. 73, DavidC AA1FA

Source record: 134939

FS: Yaesu HT FT-416

Yaesu FT-416 (same as 415 but in Grey)
2 meter HT (moded) w/ DTMF enc/dec

(Spare 416 not working included for spare parts project. Completely intact other than the fact that there is no audio and the TX light does not turn off)

2 Duck antennas

2 FNB - 25 batteries 2 watt

1 standard wall wart charger for FNB 25's only

1 (never charged) FNB-27 5 watt batt. by W & W assoc. (Cost me close to $40 alone.)

1 telescoping Larson 2 meter antenna ($24)

1 "the pouch" neoprene holder ($35)

Incl. orig. Box, Manual and quick ref. card.

Radio Shack ear/mic works great! ($20)

Radio Shack Sucktion cup window mount ant. extender. ($15)

Great for the begining HAM or anyone interested in 2 Meter mobile.

Prefer to sell together.

Let me know what you think its worth. Seems my asking price might have been too high.

Thanks,
Ken

Hello I have the following for sale:

1.Kenwood SW-2000 swr/pwr meter,with the SWC-3 coupler 1.8-54mhz,2
scales 0-200, 0-2k watts.
On a scale from 1-10 it is a 8.There is a blemish on the top right
edge of the metal case,no
scratches or dings just a faded paint blemish.I also had to replace a
resistor inside on a pc board to
for the lighting to work with 12volt bulbs .Meter works very well.
I dont have the box but i do have the manual,service manual,power
cord for PEP function & lighting.
$90.00

2.Kantronics KPC-3 TNC with/128k,Ver 5.1,also have ver 6.0 for gps,the
6.0 was never installed.
Includes cables(excluding a rs-232 DB-25),manuals,+ software,no box.
$80.00

3.Icom OPC-589 Mic Adaptor, for the IC-706,Molex to 8pin mic connector.
$20.00

4. (2) Kenwood PG-4H cables,they are used to connect the Kenwood
TM-241/441/541 ect to
the kenwood IF-20 interface.I bought a total of (6) and i used (4)
cables.
I re -wired the 4 i am keeping as molex-to-8pin female for use of
newer style molex mics to
use on 8-pin female kenwood rig.
The 2 i have for sale are NOT rewired for using mics,so it would
work fine on a IF-20.
But If intrested I can re-wire these cables for the use of using
newer molex mics to older
kenwood rigs.I did'nt realize that mfj made these cables where I
could just crimp a molex
connector on the other end of a 8-pin female.
That is why I went crazy buying 6 cables.
$12.00 each.

5. Heil mic cable for icom 8-pin female model (CC1I) to use with the
HM-10 mic.
$20.00

All prices DO NOT INCLUDE SHIPPING,will NOT ship COD!

If intrested please remove the " AR " so e-mail reads

Icom IC-2100H 2 Meter rig Runs 55W, never mobil, with all original docs and packaging $200 plus shipping.

Yaesu FT-8100R deluxe dual bander, mint, with all original docs and packaging. $395 plus shipping.

All the rigs listed above have been used only slightly, and are in true mint, as new condition. I offer 5 day return privelege on the above items only.

JPS NIR-10 DSP in good condition with box and docs. $90 shipped CONUS.

Astron RS-20A Power Supply, 20A rated in perfect condition. Mint, $75 shipped CONUS.

Astron SS-25 Power Supply, 25A rated in perfect condition. $95 shipped CONUS.

Astron RS-12A Power Supply, 12A rated in excellent condition. $45, you pay freight.

HM-46A Speaker/Mic for IC-W32A HT, excellent $45 Shipped.

HM-54 Large Speaker/Mic for IC-W32A HT, excellent $50 Shipped.

Van Gordon 1:1 BALUN New in the package, $12 shipped CONUS.

MFJ-8621 Packet Tranceiver, works fine as a packet rig on it's stock freq of 145.01. Unit is in mint condition, working perfectly, with original docs and box, $85 shipped CONUS.

SOLD MFJ-1026 Signal Enhancing Noise Filter. Used briefly and then I fixed my noise problem so it's surplus. $85 shipped CONUS.

Diamond SX-200 SWR Bridge, in as-new condition with original docs and box. Bought an MFJ-259B (great piece of gear!) right after I bought this, and never used it. $70 shipped CONUS.

Terms are postal M.O. payment, I'll supply phone # and references if requested. Shipment will be via Certified Priority Mail.

Thanks and 73,
Ron Ricketts WA5VFA

Does anyone know of an easy way to amplify 2m rf from about 1/4 (250mw) up to 2-3 watts. Most "brick" type amps require 1-5 watts input. I'm looking for something that requires less input and only boost output up to the 1-5 range.

Thanks in advance,

Scott Bridges

If you really MUST get a tuner for one antenna to cover 10/11 meters, pick up an MFJ tuner (such as model 901 or its replacement model). Any ham mag has MFJ advertised. Or call 800-647-1800. No shack should be without an MFJ catalog!

>trying to commercialize the joy of rolling your own, but it used to be cheaper
>as well as fun and gratifying to build your own rigs.

the reason this could be so was that the major cost was the skilled labor involved in all the point to point wiring in those rigs, usually in the form of a special wiring harness. modern parts let you put entire systems on a board doing away with lots of that sort of thing.

modern assembly is very automated and has minimum human fussing.

low labor content = hard to get any price advantage in just picking the parts and putting 'em in a bag (especially if you need things like leaded parts...)

Sounds like your problem with the 706mk2 is an issue that should be
delt with at the service shop. The clubs 706mk2 always does a power
on check beeping twice and checking rf output every time it turns on
but for one is an option you can turn on or off and when it does that
it doesn't reset itselft.

Subject: X-band repeater and station ID
Date: Thursday, July 02, 1998 8:06AM

Greetings and thank you for your time.

I'm have been running a crossband, remotely controled repeater. The X-band repeater is accessed and controled by my HT using DTMF tones. (Kenwood TH-79A and TM-V7A). Since I'm the Control Operator of my HT and I'm also controling the repeater, I assumed that simply giving my call sign a minimum of every 10 min and at the end of every communication adequately identifies myself and my repeater. A friend of mine contests that his reading of part 97 states the repeater must self identify regardless of my actions, just like our club repeater does.

Please clear up my confustion - am I actually operating outside the regulations by simply IDing as I have or must I also enable some kind of

automatic IDer on the repeater?

I've stopped using the X-band repeater functions entil I get this cleared up.

Thank you

Tate:

Here's the discussion on cross band repeaters taken from the 10th Edition of
The ARRL FCC Rule Book;

"Crossband repeaters"
Modern dual band VHF/UHF rigs often have the capability to do crossband linking. When operating in this mode, they are called "crossband

repeaters,"
but in fact are usually operated as remote bases. Generally, they are used
to allow an operator to access a repeater with a hand-held radio (H-T) from
a location where he or she would normally not be able to do so. For example,
a hiker in a remote location might leave his car where his dual band mobile
rig can access a 2-meter repeater. Leaving the mobile rig on, he then takes
his UHF H-T with him, and can access the 2-meter repeater via his mobile

rig. This is okay as long as two conditions are met: (1) The user links to
his crossband rig on the UHF side. This serves as his control link, so is an
auxiliary station and must be above 222.15 MHz. (2) The unattended mobile
rig is capable of identifying on its UHF output. Since this is a remote
base, the user's ID over the UHF link to the dual band radio serves also to
ID the VHF side; in the other direction, however, there is no way for the
user to identify the UHF output of the remote base, so some form of
automatic ID must be employed. Few manufacturers include this ID capability
in their rigs."

I found that to be true with most of my instuctors in my undergraduate
school, it mite take me down a letter grade, but it don't kill me.
But there was a few instructors that though writeing come befor what
they was teaching, and I did porly in those classes. Enough to bring
my GPA down to a 2.9
Also now of days you don't alwas have to do a thises, some schools you
can do like 2 reports instade, or some schools you can just take more
classes. I have seen this an the masters leavel, not so sure about the
Phd leavel, but I am not really going for a Phd at this time.

Hello...

I have a couple of nice, working, NC-109's for sale.

Pix available by return email

$140.00 each, shipped CONUS.

tnx

Craig

>
>3.) Structuring a license class system which rewards higher license
>classes with meaningful rewards, and an explanation of how more
>bandwidth can possibly meet the criteria.

One of the things I'd suggest would be to junk these two ideas. They
are a failed paradigm. We've had 30 years experience with this
sort of system, and the result is the demographic crisis in which we
find ourselves.

>I suggest you should forget "regulatory benefit". Surely you can see
>how the undertaffed and under-motivated FCC has no reason to consider
>"benefits" unless they reduce the amount of regulations they are charged
>with enforcing. The regulatory history of the last 20+ years clearly
>has shown this trend.

And deregulation is one of the goals we should be pursuing. We appear
to do our utmost to make amateur radio as restrictive as possible rather
than trying to make it as open an experimental environment as we possibly
can. We should strive to minimize as much as possible the burden of regulation
we place on amateurs. We should make amateur radio as much of a free lab
as possible consistent with public safety and order. Lyle Johnson has said
that Part 97 could be reduced to a 3x5 card listing the amateur bands and
a note saying "These are the band edges, stay inside of them, follow good
engineering practice, and have a nice day." I could live with that.

We've structured a system designed to make those wishing to become
amateurs as unwelcome as possible. That's a mistake. We need to structure
amateur radio so that licensing requirements are the minimum necessary to
assure that we can handle the responsibility which goes with the privileges we
are granted. The sort of system we have today is exactly the wrong course.
It incentivizes the wrong things. It sends the message that the highest aspiration
an amateur can have is to receive Morse Code quickly. That is so out of touch
with modern reality that it casts a pall over the entire service.

>What is needed, in my opinion, is a way to find the magic that used to
>light up the eyes of young people in awe of being able to talk (without
>wires) - not just across town - but around the world! That was the lure
>of amateur radio - not the technology which is obviously strong in your
>argument. The love of the technology comes from the curiousity of "how
>it works" and "how can I improve it".

Indeed talking to those in distant lands was a lure of amateur radio, but now we guard it jealously. We place as many roadblocks as possible between the young person and experiencing the thrill of talking to people in distant lands. You don't catch many fish when you keep your best lure locked in the tackle box.

Of course in today's global electronic village, I don't think that lure is as strong as it may once have been. Daily we see live video of the most distant places. The internet, cellphones, and other modern communications tools give us instant and inexpensive communications with the world without requiring special licensing. It is no longer a novelty to talk to people in strange and distant lands. And those lands are no longer so strange, nor do they seem so distant, as they once did.

I don't think it wise to disparage the technical curiosity that people bring to amateur radio. It is probably the most important facet of amateur radio. Amateur radio is a great hands-on laboratory which lets you explore how things work. That's one of its primary, and unique among radio services, facets. You aren't relegated to the status of user or customer. You can actually lift the cover and tinker with the works. That's a rare and precious thing.

On a more sociological level, the thing which most attracted me to amateur radio as a youngster was the way I was treated as a peer by my fellow amateurs. I think that's by far the greatest lure of amateur radio to a young person. There are very few activities in which a teen can be engaged where people of all ages treat him as a peer. That's heady stuff to a kid whose life is mostly ruled by others, and whose main lot in life is to jump through an apparently never ending series of hoops held by arbitrary authority.

At the time I was licensed, amateur radio was one of the few activities which did so. There were few artificial divisions. We all had the same privileges. We all engaged in much the same activities. And we were judged by how we operated and behaved on the air, not by the papers we might have hanging on the wall, or by whether or not we had to shave every day.

At 14 I was elected by my peers to serve as a net control for our state traffic net. They judged me on how I operated, not on who I was or what credentials I held. Many were surprised when we met later face to face that I was just a kid. I'd earned my wings the only way that counted, by showing up every day and conducting myself in a workmanlike manner on the air.

>That is how amateur radio became the driving force behind the careers of
>many noted contributors to the state of the art - not the adolescent
>"wisdom" that this was the success path to follow in electronics or that
>higher education alone can instill this wonderment and inventive drive.

It is the freedom to experiment and explore in an unstructured way which
is the best fuel for the sense of wonder and creative drive that you appear
to want to foster. The very best and most creative work comes from those
places where rigid schedules, timetables, and milestones are not enforced.
The old Bell Labs produced so many wonders because the people there
were given a place to work and instructions to do what piqued their curiosity.
That sort of free lab is a precious and increasingly rare thing. Our educational
systems and our corporate systems today are structured in such a way as to
stifle the sense of wonder and curiosity which fuel innovation. They hold out
an unending string of hoops to jump through in an attempt to crush the spirit
and instill a sense of drab conformity and robot-like obedience to arbitrary
authority.

>The goal at this time should be to keep amateur radio alive - not
>redfine it into extinction by internal arguement and strife.

Very true, and the way our demographics are tending, we don't have
a lot of time to do it either. Can we recapture what we've lost over the
last 30 years? I don't know, but I'm sure we won't if we don't try to
break free of the stifling and divisive structure we've created.

The end for Heathkit came when it became cheaper to buy an assembled
and tested product with better features and performance than to buy a kit.
Too few people were willing to pay a premium for the privilege of doing
minimum wage electronic assembly work.

Homebrew can still make sense today when you want features you can't
get in commercial equipment, or when you want to try out a new circuit
idea. But paying a premium just so you can get some practice soldering
isn't a very good reason to build for most people.

There is somewhat of a dearth of equipment in this range. A *linear* amplifier
with 10 db of gain can do it. Most of those want at least a few watts drive to
activate their RF sensed T/R circuits, but they usually have a manual way
to T/R them. In other words, a linear amp specified as 5 watts in and 50 watts
out will give you 2.5 watts out for 0.25 watt in, but only if you manually key its
T/R line.

Your other option is to build something. There are a number of CATV transistors
which are suitable for use in this power range.

This is misleading at best. If you are actually operating a crossband repeater, both the input and output must be on frequencies where repeater operation is permitted. But you can operate the HT on *either* band. This is *not* "remote base" operation, this is ordinary repeater operation, so auxillary rules do not apply. You can ID both sets of frequencies merely by switching the HT from one band to the other and giving the ID on each of the repeater inputs at the required 10 minute intervals. The repeater itself does not need to have an IDer. It is always legal for you to ID the repeater this way. It does require that you have a dual band HT of course.

The repeater is operating under automatic control (via its internal COR function). That's legal. It does need to have a time-out timer,

however. Many of the cross band repeater capable radios do have provision for setting a time out, so they are legal.

Now if you actually are operating "remote base", you do need to operate the HT on a frequency where auxillary operation is permitted. But you can set the crossband rig for *one way* repeating. Then you can ID it with the HT. This requires a dual band HT so that you can hear the distant repeater you are accessing via the remote base directly, of course. Generally, that's workable because you can usually hear a repeater much further than you can work it with a HT. Again the remote base needs an automatic time out timer.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder

on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760

email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

For the "Allow Any Band" scannign option, A105 and A106 both work, it's the
freeband mods that don't work with A106.

The mod to allow any band "takes" on v1.04 of the ADMS-1 software program,
but I haven't tried playing around with the Home and transition freqs to see
if it will work.

I am not disappointed in the least with the performance of this little unit.
But then again, i am really spoiled living in a populous valley in Southern
California, with hundreds of repeaters surrounding me.

> Gary

Gary,
Crossband repeating isn't anything new. I was doing it in the early 80's,

This may have been the first "Remote Access" Mobile link/repeater!

In the early 80's, during my employment with Rockwell International, I build a dual band mobile lcrossband linking repeater using an Icom 2AT and 3A. The radios were controlled with a logic board that provided linking capabilities from 2 meters to 1 1/4 meters. Using an amplifier, the trunk mounted system ran 50 watts on 2 meters. I used a modified speaker/microphone from a Hygain CB radio to control the 2meter rig from the car. The microphone interfaced to a "hump mounted" console that included a 4X4 DTMF key pad. The standby current drain from the whole system was about 50 ma.

The IC-2AT was modified by installing a "D" 25 connector on the rear case. The logic board (or docking fixture) was mounted in a slim line case and mated with the connector on the 2AT. It also interfaced to an Icom IC-3A through the external mike and speaker jack. To key up the 2AT, the squelch signal from the IC-3A was DC coupled to the to the control logic. The 1 1/4 meter XMT was VOX operated. There was also an automatic ID'er, link time out, and speech synthesizer chip that read back the 2 meter frequency on the 1 1/4 meter side. It even had a 2 meter frequency scan mode.

When the IC-2AT's thumb wheel switches were set to 140 MHz, the synthesizer BCD lines were switched to a high impedance and allowed the logic board to gain frequency control. When the HT was removed from the fixture, it regained normal operation. The up/down and simplex/duplex switches were also controllable.

Remote frequency control was possible using DTMF tones on the 1 1/4 meter side or by keying in the same commands from the hump mounted console. I used a second IC-3AT as a hand held to communicate back to the link. With 50 watts on the 2 meter side, the link provided enough output power to work just about every repeater in the Chicago area.

I demonstrated the system to Icom at the 1984 Dayton Hamvention. I even had offers from Hams to buy my system but I never pursued it. A few years later, Icom and others introduced several dual band radios with linking capabilities.

A few years ago I restored the IC-2AT by removing the D25 connector and replacing the case. Eventually I sold all three hand helds at local hamfest and last year my link (the logic board and case) was disassembled and found it's way into my junk box. I now own an Icom IC-Z1 hand held and an IC-2700 dual band mobile. I use the linking capability of IC-2700 and the 70 centimeter band on the IC-Z1 to remotely control the link.

Once more .....

The FCC is a creature of The Congress and marches to its beat.
If and when The Congress gets serious about reconstituting the
agency as an effective law enforcement agency (which it was
prior to the late Congressman John Moss emasculating that
function several decades ago) a solution may be had.

Getting The Congress to act does not mean complaining to one's
local Congressrep about WX0XXX jamming the local repeater. That
sort of complaint will result in a one-shot referral to the
agency which will solve THAT problem on either the
squeeky-wheel theory or the sweep-it-under-the-carpet theory
and it will have no effect on "the big picture" other than to
show THAT Congressrep that "the agency can do something"
(leaving out the "for ME") when in fact the net result is to
not solve the enforcement problem at all.

The Congress' key to "better enforcement" is two-fold: give the
agency sufficent resources (money) to once again get, train,
and deploy sufficient enforcement staff, and keep "hands off"
and let the professionals do the job.

As I keep on saying - all it takes is money.

Source record: 134990

Hi,
Looking for person with an Owner's Manual and accessories for a Hallicrafters receiver model 1200 (AKA TW-1200 and R-1200). A portable solid -state multimode 12 band receiver sold for one year in 1979. This radio was made in Japan and was sold when Hallicrafters was under the ownership of the Braker Corporation of Grande Prarie, Texas.
I have checked all the usual manual sources and have found out that the only place a manual may be found is with an owner of one of these radios. This is what I found out so far:

From: Duane Fischer <dfischer@tir.com>
FYI: I received notification Saturday, that no manuals exist for the TW-1200. According to internal Hallicrafters documents, it was produced in Japan in 1978. Some units were delivered to the United States about a month before Hallicrafters closed down. The only manuals in existance are with owners who bought one new and saved it. Not even a copy is available. The accessories are also pretty rare. Such as earphone, patch cords,
cigarette lighter dc adapter and external antenna.

I would like to talk to anyone owning this radio.
Thanks,
Jerry

Gary, many thanks for your clear and well thought-out treatise. The only point of debate is whether the "stifling and divisive structure" you mention has caused a problem - or whether the passage of time and resultant changing attitudes have been the culprit.

I don't find the current situation any more stifling or divisive than when I was licensed at age 15. I shared many of the same experiences you cite, and felt the same "heady" feeling - your experiences paralleled mine. Reading your description brought back fond memories of many of those moments back in the 1950s.

The older hams (our mentors - and yes, equals) were exceptional people by today's standards. But, they brought with them an appreciation that the "equality" was the result of a hard-earned fraternity status. I guess I have the bigoted fear that, unless some fairly high degree of difficulty is involved in the licensing process, we will let in many people who "aren't like us". Boy, what a bigoted statement!!! Ham radio has always made me feel special and I have worn my call leters like a merit badge. In business, they have opened many doors for me at the technical/engineering level that were closed to my unlicensed peers. The fraternity spans the social gap in new relationships. I wouldn't want a diminishment of the accomplishment of attaining a license.

Anyway, thanks again for the comments!!!

Randy,

With barely my ticket in hand I had a TR-3, a DX-40, a 2-NT. It
really is not that hard to learn to tune these rigs. You are making
it sound like a black art or something that takes months of experience.
I learned to tune mine with either or both help from the manual
and tips from BA enthusiasts in the NGs. It's just not that hard.

Of those rigs, however, the 2-NT is probably the most rugged and
easy to tune. Those can be had, by the original poster, for around
$100 +/- and add a Heathkit VFO for around $50-75 and a 2-C receiver
for another $100 and he'd have quite a nice starter rig, a poor
man's C-line, for about $300.

==========

I'm a relatively new ham (Aug 1997). I started out as a Tech+, am now
general. Here is what I bought/built/traded for to get started:

USED
Kenwood TS-430s with all filters, hand-mike, FM-430 board
(this is a 160 - 10 meter solid state rig, about 14 years old.)
Kenwood PS-30 power supply
$660.00

USED
RadioShack HTX-202 (2meter handy-talkie)
RadioShack 30 watt amplifier for 2 meters
various accessories, battery packs, charger, speaker-mikes
$200.00

USED
450 ohm ladder line (150 feet)
$15.00

USED
MFJ Electronic Keyer
Bencher Iambic paddles
$75.00

USED
MFJ-941 300 watt antenna tuner (had burnt 12 position inductor switch)
$5.00

USED
generic 30 watt amp for 2 meters

$20.00

NEW
switch to repair tuner (MFJ replacement part)
$8.00
NEW
MFJ-939 W9INN balun
$40.00

NEW at RadioShack, hardware store or hamfest
coax cable
copper antenna wire
connectors
antenna insulators
various parts for several simple interfaces
fuses
capacitors
copper ground strap
8' ground rod
less than $200.00

My math brings that to $1,023.00

So with that, I have a complete base station, and also a
mobile/portable 2 meter station.

At my base station, I use a homebrew 134 foot center fed dipole, as described in the ARRL Handbook. Took about an hour to build and hang in the trees. I feed it with 69 feet of 450 ohm ladder line (be sure your feed line IS NOT equal to 1/4 wave of any operating frequency.). The ladder line connects to the balun. From the balun I use 10 feet of coax to the tuner. This antenna is up 50 feet in the oak trees. I can easily tune all HF bands, anywhere on the band.

For base 2 meters, I use a homebrew 3 element Yagi. I built a "TINY 3" using the plans at:
http://www.qth.com/antenna/tiny3.htm
It is a 3 element Yagi, that has 6.5 db gain, and is also a direct connect. I started out with it at 10 feet above the ground, worked every repeater within 150 miles with 30 watts. Construction time was about an hour.

I have built a couple of interfaces to utilize FREE ham software for digital modes, such as RTTY, CW, PACKET. (I do not count my PC as part of my ham investment, because I already had it)

I use the 2 meter HT in both the base station and in the truck, with an external antenna. Also have a 30 watt amp in the truck now, and run it and the HT from the power jacks (lighters) in the truck.

Just recently bought a used dual bander for the truck, so my HT is my base 2meter rig.

Works like a charm, I am happy.

"Chris Neuman" <cneuman@nospam.com>
shared these priceless pearls of wisdom:

->If this is really true,
->
->You ought to spend more time figuring out how to secure your data.
"Flight
->Test" sounds pretty important. Your post leads one to believe tha t any
->bozo with an Av radio can corrupt your data......so who's the BOZO ????
->
->Nah...can't be true.....then again you might be a government contractor.

Yup, any "Bozo" can do that. Nope, I'm just one independent testing lab with myself as the only customer. We design and manufacture aircraft radios, and thus need a relatively quiet frequency on which to do airborne testing. A lot of our testing has to do with antennas and antenna patterns, and extraneous noise or carriers does a real number on the data.

You must remember that everything in the aircraft band is AM (Ancient Modulation) and we don't have the wonders of capture effect that FM would provide us. Some "bozo" keying up 20% of the carrier received is noted as a 20% increase in signal level. There are ways we can get around this with modulation schemes, but the AM heterodyne is always the wildcard. In most instances, carrier level is the only way to obtain the data.

"So who's the BOZO????" Well, a lot of surplus WWII military aircraft drivers think that they "own" this frequency because they chose to use it a long time ago in open defiance of the FCC rules. A lot of airshow performers found this was a wonderful "quiet" frequency and started to use it during the performance. A few airlines decided that to chat amongst themselves as they proceeded across the country would be great on this frequency. Of course, NOBODY uses call signs, because EVERYBODY is aware of the rules. So find the Bozo. The only way is to use signal strength, hope the Bozo is using the airport closest to you, and nail them as they come off the runway.

As a private businessman, I have absolutely no enforcement powers over the rights granted to me by my license for this frequency as a test station. All I can do is turn over my observations to the local FCC field office and hope for the best. Of course, I have discussed the matter with the local feds and told them of my concerns, so there is a certain predisposition to at least listen to the observations.

Hell, we don't want to "bust" people. Education is a lot better than enforcement. But to get to the end of a two or three hour test, with all the expense of keeping an airplane in the air for that time, only to be

told to go f<>k yourself by "flight leader" passing the time of day with "ace in space" as they traverse the area is just a little maddening. Especially as regards trying to correlate the prior data with something we take later and then trying to tell the regulatory agencies why the data points aren't contiguous in time.

As for "DF" on the offending aircraft, we can do that until we are blue in the face. Most of the offenders are tracked from horizon to horizon and are gone in half an hour, heading for some airport 300-500 miles away.

It is a frustrating problem.

Congress is not going to give more money [more taxes] to the FCC or any other agency. WE are trying to cut back the debt and the size of the federal government.

I will NOT vote for a Congressman who votes to increase the size of any federal agency.

> As I keep on saying - all it takes is money.

Agreed!

1) Maybe a good approach is to show that pirate operators do not only threaten HAM operations, but commercial operations as well. The same nuts that jam our repeaters, can, as easily (with a "Mod'ed" radio) go and bother other communications as well. Once they get bored with us, the problem will continue.

Failure to stop the problem here may well threaten the value of the spectrum still to be sold off, as well as the safety of the communities being served by the police and fire agencies.

2) Just as commercial interests are able to get attention focused to allow illegal FM pirate stations from blocking their signals, we should have the same invesigational power. If it requires some type of "professional bounty hunter" to afford the equipment/legal status, then split the fines between the privitized enforcement and the FCC. If there

were dollars to be made for tracking these guys down, and the fines were made to stick as easily as the average traffic ticket, many things would quickly change. And without Congress even redirecting (our) money to make it happen!

I have to disagree strongly. The older Kenwoods (TS-520,530,820,830) are
excellent rigs and would be great beginner rigs. If you had the intelligence to pass you
novice or tech-plus exams, you can easily master "the art of dipping
and tuning" tube finals -- especially if the finals are 6146s like in the
Kenwoods. Also, you don't have to tweak if you change frequency a "little bit" (of course,
an undefined amount here).

Don't stay away from those older rigs -- there great.

Harry OM,

I highly recommend the TS820 or TS820S. They are easy to use, rugged
and reliable, have pi-net output (can match anything within reason on
coax feed), cover 160-10M plus a spare band position, can be modifed for
WARC bands if you find you really want them (I modified mine for 30M),
has BUILT IN power supply, has FSK built-in (For AMTOR, PACTOR, RTTY),
is REPAIRABLE if needed, and automatically selects the narrow CW filter
for FSK receive, something the TS430, TS440, TS530 cannot do (they all
have no FSK, the button labeled 'FSK' on the TS430S notwithstanding).
The tuning of an output pi-network is a trivial process you will learn
in about a minute or so of practice. You can find them for $400 and it
will be worth about that whenever (IF) you want to sell it in years
hence. I have been using mine for CW and FSK daily for 19 years now,
and I would not part with it.

'Nuff said?

Yes,

The TM-V7A does have a time out timer, least that part is covered.

I guess what I'm reading in your comment is that as long as I don't use the remote control functions it's not a remote base? Maybe I need to better understand what "Remote Base" is.

Taking a read through the FCC legaleze, they mention "Any transmission" must be identified. Since the only ID coming out of my x-bander on the UHF side is from whoever I'm talking to (or the 2meter repeater when it self IDs), does that then mean that whoever is talking to me (via the 2meter repeater and the x-bander) is then the control operator of the x-bander? Since I consider myself the control operator (especially since I have DTMF control over the thing) I'm fairly sure it must be IDed with my call - somehow. Current plan is to just input to the X-bander on the 2meter side and ID from the HT, that seems to be a common solution. It's clearly in the spirit of the rules - but does it match the letter?

The example included by ARRL matches what I was doing with my setup, almost to a "T". I leave my vehicle on a hill top where the mobile X-bander can hit the in town repeater while I drop into the valley with my HT and fly rod to harrass the local trout poplulation. Apparently, at least ARRL is calling this a "Remote Base".

What am I missing here or am I just reading too much into ARRL's comments in an over enthusiastic attempt to follow the rules?

There is nothing gentlemanly about your carrying on about a transmission mode that has many adherants around the world.

If you want to promote the many benefits CW/AM/FM/digital mode activity in the Amateur Service, go ahead - amateur radio will be the better for it.

On the other hand, if all you want to do is complain about SSB (which many people enjoy) and do nothing positive about promoting the other modes, then you should seriously think about handing in your amateur licence - we have enough whingers and knockers without you contributing to the melee.

Some people enjoy SSB. Anything you say or do will not change this one iota. Get a life and do something positive!

>Radio Randy

Humm,

The Kenwood TS850 is a very good rig and is totally solid state... no tune
but it does cost about $900 used.

But I do tune my amplifier to this day and learned on radios you have to
tune. In fact most HF amplifiers sold today require tuning. It's a good
thing to know and is easy. Also makes you able to operate almost any
station in emergencies if you get into the emergency communications part of
the hobby.

I'd stay away from the Kenwood 430 as it had slow switching and did not work
well on digital modes like Amtor.

I would emphasize the radio with what available money you have and then
build around it as you get into the hobby and more time to save up. Don't
skimp on the radio too much inorder to have lots of other gadgets at this
stage of starting into the hobby. I would do with out is a radio that has
the WARC bands, 30 meters, 17 meters, and 12 meters included.

My all time favorites that perform well are Icom 765, 735, Kenwood 940, 440
and 830 or even the well known 520 and 530's ($350+). The 830, 940 and 850
were very notable. If you want to go mobile someday then get a solid state

this time around and when you upgrade, use the old radio for your mobiling needs. You will save money in the long run and generally the 440 or 735 fit well into this category.

Good luck.
Have Fun

Gentlemen

This thread is being echoed to several newsgroups
that are far removed from those interested in
Rec.Radio.Amateur.Policy or MIsc., including
forums for antique phonos and audio tubes!!!!

PLEASE do not add further comments to this thread!

Regards

Peter

1511. Old GE Progress Line transceiver - info??

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-15 00:00:00 UTC
From: Steve Phipps <sphipps@clandjop.com>
Message-ID: <6r4u0d$ga5@news3.newsguy.com>
Source record: 134762

Hi all,

Recently I picked up a 1960s era 144 to 150 MC GE "Progress Line" 50 watt base transceiver with manuals for next to nothing and I'm thinking about getting in on 2m. The manual doesn't even mention if it's AM or FM. Does anyone have any info on them? Are they good or bad? Is it worth my time to modify?

Thanks,
Steve

1512. Velocity Factor . . .

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-15 00:00:00 UTC
From: Ken Bickel <ac4vvNoSpam@qsl.net>
Message-ID: <6r53v0$1k9$1@news.megsinet.net>
Source record: 134763

I would like to know what the velocity factor of THHN building wire is. I saw the figure at one time, but have searched my reference books in vain looking for it. If you know what the published figure is I would sure appreciate knowing.

I intend to build some antennas using #14 THHN, and need to know the velocity factor to calculate the length.

Thanks in advanced

Ken

Murch Electronics Model UT-2000-A (See July 1970 QST article, by Lewis McCoy). - THE ULTIMATE TRANSMATCH - Continuous coverage 10 through 80 meters (actually general coverage from 3.2 mHz to 33.1 mHz using rotary inductor and turns counter). Condition: Appearance is like new, shows very minor usage .... at present the pop out spinner on the rotary knob is misplaced but I will find it. Operation has been tested to max legal output using a pair of 4-1000A's on all bands. COST is 110.00 USD plus shipping via UPS (weight is 8.5 pounds). Payment by money order or certified check shipped same day .... Personal checks must clear first (sorry but I have been burned before). Contact me by my EMail if you are interested .... Thank you es 73!

Ok guys:

I expected a LOT of feedback on that post. I'm not condemning radios with tube finals, hell, I still own an FT-101ZD and am currently using IT in my shack instead of the 735. But then, I've been around tube rigs for awhile now and, other than tube replacement cost, am quite comfortable with them.

There are a number of advantages to solid state rigs including general coverage receivers and no tuning requirements. These are coupled with lower power requirements while running mobile (you CAN'T argue THAT) and a compact design. Let's not forget memory channels (No, I know you can plug crystals into an old radio, but why?)

You guys can talk all you want about the virtues of tube finals but I would STILL insist on a solid state rig for our club station. That way, all new hams (even the ones who can't program the local repeaters in that new handheld) can operate with a minimum of assistance.

Besides, I've NEVER owned a tube rig that could run 100 watts on RTTY like my 735 can.

I have the following for sale:
1 Kenwood TR-7950 2mtr mobile with mic, no bracket or manual,
$65.00. Works great, volume pot is noisy, very good condition
1 Kenwood TM-731A 2mtr/440 dual band mobile with mic, manual and
duplexer, no bracket. $120.00. Works great, very good condition, can do
crossband repeat
1 Alinco DJ-S41T micro 440 handheld, new, manual, box, warranty
card. $65.00. Would work well in a city environment, doesn't quite cut
the mustard out in the sticks where I am!

Please email billp@idsely.com if interested. Prices include shipping.

I have a TK-730, the programming software and the factory programming cable... Am guessing that they will also program the TK-760 radio's??? Does anybody know for sure if this is so and if so do you know how to put the 760 into program mode? I have no problem with the 730 but the buttons are different and the 730 doesn't seem to want to go into program mode.

If not any idea where one could find some software to program the 760's???

Thanks a bunch

Hi,

My newly acquired Yaesu FT-50 transmitts in the range 140 - 174 Mhz in the VHF band. I would like to have the radio transmitt down to 138 MHz. Is this possible ?

I have tried to interrupt the programming by pulling the plug like discribed on several sites on the net, but this mod doesn't work. Newer firmware ?

Any help would be greatly appreciated.

Tore

I had one. It took forever to order. Once it finally came in, I was happy with it. I used it with my ICOM 726. When I got my TS690S, it didn't make much sense anymore, so I sold it. Pre-amp worked great. I pushed it in to some strange loads, like a 10M dipole and an ICOM discone. Of course, the cushcraft 5el 6M beam worked best.

We've added a ton of new radio listings at the BONEYARD.

"What IS The Boneyard?" you may ask!

This is a list of observed asking prices for (mostly older) amateur radio and shortwave etc. equipment. Hence the name "Boneyard."

The latest additions are for some VERY obscure radios that you have probably never heard of. Some of them were a big flop and never made it in the amateur market, but you never know, there MIGHT be a few floatijng around out there in a dusty box under a table at a hamfest... ah the joys of digging under those folding tables!!!

Visit the BONEYARD today for a free guesstimate on a radio's price (no guarantee of accuracy, use at your own risk etc. etc.)

http://www.mnsinc.com/bry/ham/boneyard.htm

ENJOY!! 73 de AF4K 'Bry'

The cells cool down during the top-off period, so if you're going to judge
temperature the only accurate way to do it is to interrupt the charging
and pop the top at the end of the fast-charge to look for hot potatoes.
(Or tape the lid latch down so it thinks it's closed, and leave it open).

SWR is becoming unfashionable these days. What use is SWR to anyone. What we would like to know is percent of Tx power which is lost in the feedline - its efficiency !

Instrument-wise, what we really need is a handheld, self contained, R + jX measuring instrument, 2 digital displays, from 1 to 30 MHz.

Quite possible with modern technology and not too expensive for amateurs.

>was about 10% of what it is now. The rules, as constructed
>today outlaw all modern forms of communications and most
>experimentation.

Well, the technical rules could certainly stand revision, and
some of the regulatory restrictions need to be removed too,
but there's still lots of wiggle room in current regulations for
interesting experimentation.

> Packet is firmly stuck at 1200 baud. Ask any 14 year old
>about 1200 baud and you will be laughed at.

Very true, but that isn't primarily the fault of restrictive regulation.
We've been running 56 kb here since 1986, and the FCC has given
us an entire band devoted to that (219-220 MHz). It is not twitchy,
it works, and it is solid. The reason most hams are still stuck at
1200 baud is that they consider packet an accessory use of their
FM voice radios. That just won't cut it when you need speed. You
need a purpose designed data radio. The WA4DSY RF modem
and a transverter give you that. No muss, no fuss, plug and play.

> Sometimes I think that ham radio is firmly stuck in
>the year 1936(at least some would like it that way).

I sometimes get the same impression, but there are people
doing interesting things. You can be one of them.

> Spectrum is just too valuable today to give it away
>to the folks that have turned to stone sitting in their
>chairs looking straight backwards.

That's certainly true too.

I bought an FT-50 and live in the remote Cumberland Mtns of Tennessee. It is pretty much useless. I can hit the Frozen Head repeater from here but folks tell me that I am weak and breaking up. Receive is okay... I can hear them... when somebody is there... not very often. I only turn on the unit about once in 3 weeks now, just to see it light up and scan for a few minutes. Oh well, that was $350 for a lesson in wasteful spending. Even with an MFJ external antenna its not much better. A few have tolerated my poor signal for a QSO, but usually gave up after losing me altogether. I think I'll go mow the grass for some fun...

>"Remote Base" is.

No. You can exercise control operator functions on a repeater too. It isn't that simple. There are three different kinds of control. There is local control which is what most of us use. That's when we have direct physical access to our equipment. Any station can be operated by local control. There is remote control. That's when we control a station by wireline or by an auxiliary radio link. Any station can be remotely controlled (and would colloquially be called a remote base). And there is automatic control. That's where the station controls itself based on certain parameters programmed into it by either hardware or firmware. A repeater can operate under automatic control or under remote control, or under local control.

Normally, a repeater operates under automatic control. Only when it is handling third party traffic (for example a phone patch) does it have to be under the remote or local control of its designated control operator (who is *not* the user making the patch). Operating ancillary functions of a repeater, like bringing up a patch, is *not* acting as a control operator. To operate as a control operator, you must be able to positively control the transmitter at all times regardless of any activities on the input of the repeater. The automatic control circuits do this, or a control operator does this. A *user* never can do this.

>Taking a read through the FCC legaleze, they mention "Any transmission" must be
>identified. Since the only ID coming out of my x-bander on the UHF side is from
>whoever I'm talking to (or the 2meter repeater when it self IDs), does that then mean
>that whoever is talking to me (via the 2meter repeater and the x-bander) is then the
>control operator of the x-bander?

No. The radio is operating under automatic control, just as the 2m repeater is. A user is just a user. He is not the control operator.

>Since I consider myself the control operator
>(especially since I have DTMF control over the thing) I'm fairly sure it must be IDed
>with my call - somehow. Current plan is to just input to the X-bander on the 2meter
>side and ID from the HT, that seems to be a common solution. It's clearly in the
>spirit of the rules - but does it match the letter?

Yes. It isn't necessary for the repeater to automatically ID. You can ID it manually by saying "This is KE4ZV via the KE4ZV repeater". That satisfies the ID requirements for *both* stations. But you have to do that so that it comes out on *each* frequency on which the crossband repeater transmits.

As you suggest, just flipping the HT to the other band lets you do this. Remember, ID is required every 10 minutes during operation, and at the end of operation. We used to have to ID at the start of operation too, but that isn't required anymore. It is still a good idea to do it anyway. So when you set up the crossband repeater for operation, ID it both ways, do that every 10 minutes while you use it, and ID it a final time before you shut it down.

>The example included by ARRL matches what I was doing with my setup, almost to a "T".
>I leave my vehicle on a hill top where the mobile X-bander can hit the in town
>repeater while I drop into the valley with my HT and fly rod to harrass the local
>trout poplulation. Apparently, at least ARRL is calling this a "Remote Base".

The difference between a remote base and a repeater can sometimes be a fine one. A remote base is nothing more than a remotely controlled station. Control can be by wireline or by a radio link operated under the auxiliary regulations. A remote base cannot operate under automatic control. Its transmitter can only be activated by the control operator. Since in your setup the transmitter is activated by COR (automatic control), it can't be operating as a remote base. It is operating as a crossband repeater, and must follow repeater rules. But if you exercise positive control over its transmitter at all times, then it can be called a remote base. This would require you to transmit a control signal each time you wish its PTT to be activated *in either direction*. Your crossband rig won't operate this way without modifications, so it isn't a remote base.

>What am I missing here or am I just reading too much into ARRL's comments in an over
>enthusiastic attempt to follow the rules?

Yeah. This subject can be subtle. IMHO the folks at the League who offer these rule interpretations, and the folks they talk to at the FCC, often aren't familiar with the operation of these systems. So we sometimes get interpretations that don't really apply to the situation. You're operating a *repeater* under automatic control, and have to follow the *repeater* rules. You need a timeout timer, which you have, you need to ID each frequency on which it transmits, which you can, and both frequencies have to be in *repeater* subbands. Don't try to operate either one in a simplex segment. This trips up lots of people. If you had positive control of PTT, which you don't, you could operate it as a remote base, and the control link could be on any frequency authorized for auxillary operation, not necessarily a frequency authorized for repeater use. But you can't do that because PTT is under the automatic control of the COR in the radio, so you have to operate it as a repeater.

>bottle again.

What you've described is *exactly* the role of the Amateur Auxiliary
under current rules. The problem is, once the information is brought
to the FCC, they *don't do anything with it*. That's because virtually
all of the field engineers are *gone*. They were RIFed so that the
funds used to pay their salaries could be used to pay *lawyers* in
the DC office to handle spectrum auctions. All of the monitoring
stations are closed, and the FCC mobile vans sit in a Maryland
parking lot because there is no one to operate them. Enforcement
is gone because those qualified to do enforcement are gone. We

won't get enforcement back until we get those people back.

The ARRL proposed giving the AA the power to act as FCC field engineers, but the AA aren't sworn officers of the federal government, so they can't legally do that. They can only bring citizen complaints, and as you noted, such complaints have to then be investigated by impartial federal officers, who can properly and legally investigate the complaint, before formal charges can be lodged. And those federal officers are *gone*. Any enforcement solution is going to hinge on finding ways to get those positions staffed again.

Actually, there is another way, and it has been used in a few localities. That's to bring a civil action against the troublemakers. It is expensive, and you have to find civil grounds for a suit, but it has worked in a few cases. In my home town, one ham sued another for malicious mischief and won. In California, a repeater club sued jammers in a civil trespass suit and won. This isn't a good answer, but it may be the only answer we've got if we can't get the FCC field organization staffing back up to working levels.

Maybe the national ham organizations could be the ones to file the
civil suits? But the NPRM did make reference to hams presenting some
form of new paperwork to the FCC before they would take action. I need
someone who understands that idea to explain it to me.

The Greater Buffalo Hamfest and Computer Show is comming up next Sunday August 23 at the Hearthstone Manor in Depew, NY.

This event is sponsored by the Lancaster ARC with the cooperation and assistance of several othe Amateur Radio Clubs. It will be the Amateur

Radio and computer EVENT OF THE YEAR for the Western New York Region.

There are still some indoor vendor spaces available so please contact Bruce KG2IC at 716 625 8800 to make your reservation.

The following is a brief description of the show which is located near the intersection of Walden Ave. and Dick Rd.

Time: 6:00am to 3:pm for outdoor, Indoor starts at 8:00am

Over 3 acres of outside fleamarket area

13,000 sq. ft of inside Vendor space

Food, VE exams, free parking

Easy to get to, Right off NYS Thruway I-90

Prize Drawings every 1/2 hour

Inside Hall opens at 8:00am

Talk-in 147.255+

Check In Prize

Tables available

Tailgating spaces are FREE

THIS HAMFEST WILL BE HELD RAIN OR SHINE. THERE IS A LOT OF INDOOR SPACE!!!

FOR MORE INFORMATION, PLEASE CLICK ON:

I have a nine year old 940 that has never given me a problem. I noticed in the manual, however, that there are two memory back-up batteries that should have been replaced by now. Anybody have any experience with replacing these batteries?

Ther plates actually belong to the State of California.
They DON'T belong to you!!!
I know, a lot of guys collect them anyway.
BTW, these plates are worth about $5 bucks each.

You could privatize the FCC, but you can't privatize police
power, that's a government monopoly. And how would you
privatize the spectrum they're charged to manage? That's
a public commons, and only governments represent the
interests of the public (in theory anyway, that's their job).

Source record: 134852

You have to replace the button... not a hard thing to do. The button
has on the inside end a rubberized treated conducting compound which
contacts the curcuit board to turn on. These things can wear out just
like membrain type keypads do.

To replace it, follow any of the posted mod disassemble notes.... remove
antenna and knobs, remove sticker under battery to get at screws for
keypad, remove keypad, radio will pop (carefully pry!!) out of front
plastic shell.
You rplace the button in the front shell and put back together.
Yeasu will mail you a replacement button for free from their tech
support web page... they have a shorter button which corrected a problem
of the radio turning on while in yr pocket,etc...same button , just abt
a 32nd shorter in height.

Tom

I am sorry to say but that problem you are having is not isolated. My father and I both purchased TS930s way back in 1982. I had a great run (problem free) until about a year ago. Exactly the same problem as you describe then occurred.

My father had that problem after only 3years. I am told it can be repaired but at a cost that you would be better off getting another rig.

I'm sorry and wish I could give better news to you. The TS930 in general were duds. Some though have been lucky . But a hell of a lot of us bought 'duds'.

>> I will NOT vote for a Congressman who votes to increase the size of
>> any federal agency.
>>
>> W4SCO
>
> If that opinion is predominent then we all will have to live with the
>result-more of the same only worsening continually.

I think the KEY to future FCC enforcement action can be seen in the Clinton/Monica sex scandal [possible Impeachment case]. Linda Tripp made tapes of Monica and took those tapes to the prosecutor, who possibly could not use that evidence in a court of law ... at least not strong enough evidence upon which to IMPEACH a sitting president. So what did he do, he went to the FBI [federal law enforcement body ... not the FCC agency here for comparison] who then did a 100% LEGAL wire sting on Monica ... that could be used in court.

If you follow that same approach to handling our interference problems on the ham bands ... [the FCC appears to not have the resources to handle the problem] we locals hams who might hear someone causing problems on the ham bands ... we would atempt to record that information and possibly even to locate the person responsible. BUT we would then take that evidence [we collected] to a national ham orgization who would then write up the "legal paperwork" that the FCC has asked for in their NPRM that would ask the FCC to formally investigate [possibly thru the FBI] and only then after that formal legally useable [in court] evidence has been collected would the FCC take action on the matter against the ham or other person who was the basis of the original complaint.

I further suggest that matters concerning satellite interference might best be refered to AMSAT for referal to the FCC ... packet problems to TAPR, general HF problems to ARRL, etc. No sense in giving one ham organization like the ARRL so much power when specialized national ham organizations know better how to address the concerns of their members [users]. It also spreads out the work because it will cost time and money to do this. But I believe it is the ONLY way we stand a chance at getting control back on the ham bands ... before it gets so far out of control [like 11m] that we can never put the cork back in the bottle again.

as I understand it user fees go into the GENERAL FUND that runs the
WHOLE government unlike the Postal Service that operates from its
revenues? If so our paying fees would have no effect on the FCC's
enforcemnt ability ... just more money for the general fund.

Dave,

Interesting review, thanks.

I just wanted to add a note re. something you mention on your review page re. the Saitek Charger (I have one from Real Goods, which is called ECO Charger, but it's the Saitek - it says so on the bottom).

I've been using it for NiCads for about 9 months and it's great! I also top up my alkaline batteries with it. The readout shows charging time nicely and it discharges NiCads before re-charging.

I was told by Real Goods last week that it might not do a full charge on NiMh batteries - (I've just bought a Nikon Coolpix 900 camera and am switching to metal hydride for that) so I found your review of interest.

From: Martin <kb0haespam.stinks@usa.net>
Message-ID: <35D7B674.FC91C30D@usa.net>
Source record: 134658

Hi everyone. Can anyone tell me if the Kenwood BC19 rapid charger charges the pb39 and/or pb39 battery packs when the battery packs are not attached to the radio? Does anyone know of a third party charger that will chatge these battery packs when they are not attached to the radio? If I can only charge packs when they are attached to the radio, I will not buy the TH-G71A as I am now contemplating.
Thanks

I seem to have misplaced my instructions for doing this mod. However,
the Tx vco won't operate over that spread. You might get, at most, TX up to
about 162 MHZ, and even then you start to get distorted TX deviation in the
ham band.

Hi Pat:

Well, this will be my first post so I hope everything goes well.

Read your request for the "most accurate clock." I don't have any information where you can get an old Heathkit which they don't make anymore, but I have some information that will give you a big jump in the correct time into the 21st century. And you don't have to put it together and suffer the agony if it doesn't work.

Would you believe that there is a watch that has a built in radio receiver that works in the VLF range and receives a signal from the atomic clock in Fort Collins, Colorado. The accuracy of this arrangement will give you billionths of a second over a million years. Can't beat that!

They have a web site that you can connect to: http://www.arctime.com. I will give you a little tip. I just received a flyer from them and they have a $79 watch that is not listed at the web site. That might be a price range that is hard to beat. They call it a digital sport watch. Check it out.

I have owned the desk clock for over a year now, and all the watches and clocks have the same time, because I reference this clock to the others. Pretty neat stuff.....

I have always been a bug about the correct time, but not being on time.....

See Ya!!!

I use mine mobile, with the unit remoted. Few other HF radios will let you do that, and for me it is a must (sold the TS-50, which otherwise was a fine HF radio).

Yaesu is supposed to introducing a competing model (FT-100?). But I do not know much about it.

If you do not need mobile, then there are lots of choices, some likely better in the same price range.

From: Dean Kastoris <n8ihs@flash.net>
Message-ID: <35D741E5.BD071D86@flash.net>
Source record: 134736

I have two Icom IC2350 dual band mobiles for sale. One of the radios has only been powered up for 10 minutes to make sure it worked out of the box when I bought two of them from AES. I am asking $325.00 for the new IC2350 and $300.00 for the other IC2350 that has very little time on it and is absolutely flawless. I am the original owner and have all the paper work and boxes. I am also looking for a mint Icom 471 A or H model and would consider using one of my IC2350 as partial payment for an IC471.

1637. Help with TS-850 "power out "twitching"

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-16 00:00:00 UTC
From: Dave K9NX <n7ex@athenet.net>
Message-ID: <35D75707.78A8@athenet.net>
Source record: 134742

My TS-850 has recently begun to display an odd behavior. If you hold the key down in the CW position (or in tune mode) the power deflects downwardly ever so slightly on a pulsed basis. It "twitches" so to speak on a period of approximately one second. The problem becomes more pronounced after the rig has been on for 30 minutes with the momentary power drop reaching as much as 15 watt. The problem is hardly noticeable when the rig is first truned on.

Anybody out there been here..done this, and can give me some ideas on where to look (voltage regultor oscillating somewhere?)?. I have a service manual, am capable of and have done repairs on the 850 in past so please no suggestions on where to send it to get it repaired. The TS-850 is not all that hard to service if you have the tools. Got my can of "kool it" and going hunting!

Thanks in adavnce reply here or direct to n7ex@athenet.net

My point was more the following. Suppose his call is re-issued and the new holder wants call letter plates. He will then be the only one authorized to have them in use on a car. I was not thinking in terms of a collector, which was probably me being dense (not uncommon)!

1641. Advice on a Radio Shack 2m HT

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-16 00:00:00 UTC
From: "Christian D. Guevara" <cdmrga@dakotacom.net>
Message-ID: <35D76973.2C8B@dakotacom.net>
Source record: 134746

I'm in the process of getting my tech license and my local Radio Shack has a great deal on a 2m HT. The actuall brand name on the radio is Realistic, but I guess it's a subsidary. It's output is 5W. I was just wondering if anyone knew anything about this radio. I'm new to ham so any help would be greatly appriciated

1642. Ground Plane Question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-16 00:00:00 UTC
From: Jeff <jeffj@scott.net>
Message-ID: <PNR525866214t@scott.net>
Source record: 134747

If I wanted to use a mag mount mobile dual band antenna at my house, is it acceptable to place the antenna on a piece of tim or some other type of metallic surface to form the ground plane? How big of a piece of tin should I use under the antenna? My reason for asking is that I don't need an exotic antenna and due to restrictions I can't have an outside antenna so I would like to put one of my MJF mag mount dual band antenna's in the attic. Any insight or suggestions would be welcomed.

I would have to add the Icom IC-751A to that list too. I just bought one used and love it! This radio holds it's own when even compared to today's NEW radios. It has a hot receiver and all the bells and whistles anyone would need in a first HF rig. I would recommend the 751A to anyone looking for a quality used radio. Just my 2 cents... 73

Source record: 134785

Ah, a 'Prog Line', brings me back...

Good radio for its time, but of course rather obsolete in this day and age. Replacing the vacuum tubes alone would be enough to make the project not very cost effective. Not that these are bad radios, but more modern equipment (like '70's vintage... :) would be a much more practical project. They are FM, by the way, and manuals are probably still available in the amatuer community. I bet there are even a few still in commercial service somewhere...

I believe that there are several federal agencies that are now privitized; the Postal Service [they have postal inspectors], many parts of the defense dept are being privitized, there is talk of the doing the same to the FAA, the Tenn Valley Authority, etc.

>Radio Randy

I would agree with getting solid state over tubes if the money outlay is even close or you hope to do any mobile HF work. But if money is tight, there are lots of good inexpensive tube rigs out there that allow you to get into the hobby without shelling out a lot of dollars. If you do any CW, I would hold out for a rig that had WARC band ability in solid state or tube.

The 735 may run 100 watt RTTY well because it does not have a power supply built in to cool and the Kenwood 850 runs cool on RTTY and SSTV too. But power supply ability needs to be adequate for long duration transmit times. It should be noted that a power supply (or batteries with a battery charger) is an extra cost item in the equation of buying a solid state rig, something that was not mentioned in the previous posts and needs to be considered as one looks at all the options and cost tradeoffs.

Either way, jump in and have fun.

Does anyone have a modification for the Yaesu FT-8100R dual band mobile radio? I am in Civil Air Patrol and an Air Force MARS member and I need to modify this radio to transmit out of band. If you don't have the mod, any good web pages could be helpful. I've checked alot of pages already, but this mod is not listed yet.

Thanks,

Rick Heis, N8PPH

> It is just about useless...

Well, you said it yourself: "I live in a remote region..."

NO HT will satisfy you. Sure wish you had done a little more homework and discovered that fact on your own. Instead, you make a purchase of an excellent HT, and then tell us all it is worthless.

You may be able to improve your situation with a directional antenna and rotor setup.

I can sense your frustration, though. Talk to the owner(s) of that repeater you occasionally hit. Look around at the nearby homes and see who has anAmateur antenna erected, and ask them what they're doing with Amateur Radio.

The Yaesu FT-50 is an excellent radio. But you have requirements from Amateur Radio that no HT may be able to fulfill.

I have a Kenwood TH-G71A handheld with the 6 watt battery for sale! Hardly used, still have the box and the manual - all new. Bargain deal. I'll pay shipping in US. Excellent radio, MIL-SPEC rating. It's a real heavy duty rig. Easy to use and learn, a great beginning radio, and great for experienced too, because of its advanced features. Little, cute, and a deal. $240.00 or best offer. E-mail me at CLPerschon@aol.com fast, before someone gets to it first!

73's,
Charles

Phil,

Overall, how does it compare with the other competitors in its price range? I started to look at it because it had 2 as well as HF capabilities; All in a small package (XYL friendly). The DSP seemed a bonus.

I note that the price out of the UK is about 60% more than the US price (when allowing for currency conversion) so whatever I get will most certainly be coming from the States.

Rgds,

Don't despair, Johnny. There are two ways to improve your performance...
either get a roof mount antenna, or a power booster amplifier for your
radio. Personally I would try the antenna first, since that is normally
the cheapest solution. Talk to other area hams to see whether they would
use a directional antenna. Then you could "aim" the antenna in the
direction of the repeater, or add a rotor and get really fancy! The power
amp would help too, but I really think that a good antenna will do the
job.

No, the Post Office is run by a postal commission which is somewhat
insulated from politics, but it isn't privatized. Postal workers are still
government employees. The military is certainly not privatized, though
of course it may employ some civilian workers, but they are still government
employees even though they aren't soldiers. Contractor employees are
private, employed by the contractor rather than the government, but
contractor employees have no authority to enforce government regulations.

I use HyperLog and there are no problems in doing what you want.
You just set the correct offset between your local time and UTC, then the
program will log the QSO's with the time you want.

Tim,
I have the pre-MKII 706 in my Jeep and I have the FT-847 at my QTH.

You can compare them, but I see them as two very different radios. Sure, they state that the 847 is a mobile rig, but how many mobile satellite stations do you see (I am sure someone does it but not that many)? I do consider the 706 to be a good mobile radio, and would not use it at the QTH mainly because of the small front panel and sub-menus, which is what makes it perfect for mobile use.

When Yaesu gets their FT-100 on the market, then the IC-706 will have direct competition.

Sorry, but you must be a young one. Heathkit made their name for general electronics kits first. Then amateur radio kits. Then electronics test instruments. Then hi-fi electronics. Computers didn't even enter their realm until the late '70s.

So no, the most logical place to talk about Heath products is either sci.electronics.equipment or rec.radio.amateur.equipment -- a lot more logical than just comp.sys.zenith.z100. Besides, my H-8 predates you H/Z-100 by several years.

Source record: 134618

Greetings,

Several of the small push buttons on my TS-850S have become intermittant. They include the up/down band switch, "F. Lock," "ENT," and "Mem In." I have had some success removing the front panel and spraying them with contact cleaner (DeOxit D5) but the problem eventually returns. I have a similar problem with the rotary memory channel selector. The rig is seven years old, but has quite low milage. Any suggestions for a fix?

Thanks in advance,

Clark, KD9QI

None of the other ICOM product prices seem to have changed at the HRO Phoenix web page, so it is probably not the value of the yen affecting this. I wonder if ICOMJAPAN is trying to reduce inventory before the new FT-100 (Yaesu?) comes out, which will probably reduce demand for the 706MK2 drastically (at least it will in my shack).

Cross-posted to: rec.radio.scanner,rec.radio.amateur.equipment,rec.radio.swap

I pick up this radio scanner made by Sears and Roebuck Co., called Sears5band. It is a 16 channel user programmable using a plastic punch card. My question to you all is what is the programming logic for these punch cards. What holes do I punch to get what frequencies?

The card has 16 rows of punchable holes for 16 channels, and each row has 16 holes. The only channel currently working is ch16 which has WX 3 162.475.

Any info is appreciated. If any one has extra puch cards I'll be interested in them also. If anyone has a Sams Photofacts SD-14, which has this radio informations, please let me know.

Thanks in advance.

1700. TS-830S & FL-2100B info. needed

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-17 00:00:00 UTC
From: Michael Melland <badger@vbe.com>
Message-ID: <35D8850F.4752@vbe.com>
Source record: 134625
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

I recently purchased a very nice Yaesu FL-2100B amplifier. I intend to use it with my Kenwood TS-830S. The amp specs are as follows: 12 volt keying relay, -5 volts dc max ALC, 100 watts peak to peak max. rf input. The TS-830S specs are: Keying relay rated for 100 volts @ 1 amp, ALC is <-10 volts dc.

I have been advised not to utilize the ALC hook-up but rather to add RF NFB resistance (20 to 30 ohms) in the line which controls the input to the cathodes of the 572B tubes. This reportedly allows the rig to drive the amp without overdriving it by limiting rf input to the tubes. Ordinarily, the rf output of the rig can be lowered by the carrier control in CW but in SSB the only control is the mic gain which may drive the SSB ALC but which does not really control output. The TS-830S puts out about 120/130 watts peak to peak RF on SSB.

Interested in information from those who have done this mod to lower rf to an amp or those with other ideas on this amp/transceiver pair.

If you are located somewhere in the middle of, say, NY and Jamaica, heres what you could do.

A). AM Radio, low power, 10,000 watts: This will give you coverage of a metropolitan area.

B). AM Radio, 50 kW. Will send your signal down through the east coast and the carribean in the night.

C). FM Radio: You will need around 100 translators. This will cost tons of money a year thinking of all the translators needed.

D). SW Radio: If you have a 50 kW Transmitter, you would get perfect coverage. Register a 9 or 11 MHz Frequency and you will be fine. This would cost $2300 a year for a license, I do not know transmitter costs, however much electricity is used.

E). Satellite Radio: Satellite Radio Space is expensive, but works well.

F). Internet Audio: Sending radio via the Internet is cheapest, and works best. However, many people in the Carribean do not have internet access.

I have a Radio Shack radio and found it to be a pretty good radio for the $$. It is not my main HT but it works well for a backup. However, I too have had the radio in the shop on more than one occasion and have friends that have had theirs in the shop as well. It seems to me that if you get a good one you won't have problems. But from talking to toher hams it seems more likely you'll get one that will have problems. I would certainly get the extended warranty.

Yes. Even though the newer radios have been modified to make it harder to FreeBand, the MARS/CAP mod has been unaltered.
Remove the battery pack, and antanna and whatever other accessories you have on it. On the back there'll be two stickers, remove the lower one with the ni-cad warning on it. Be careful when you do so because underneath there'll be some pots for adjusting the radio. DON'T MESS WITH THESE! You'll see on either side of this pot window two screws. Loosen them til they almost come loose, then push them in with your thumb. The keypad on the front will then come off. Take the screws off all of the way now and set them and the keypad aside. At this point it's best to put the red rubber seal (might be a different color for you) back around the keypad. As you're removing it from the case, you'll see how it goes.
Now that you're inside, look at where the keypad was. You'll notice in the lower left corner three very tiny solder pads. The first on the far left has a blob of solder in it, the next two have a little solder on them but are unbridged. Removing this first blob of solder to match the other two will MARS/CAP the radio.
Above these solder pads is a row of five surface mount resistors. Removing the first, then after re-assembly of the radio, changing some of the radio's settings will be what the old FreeBand trick was. But with the newer radios you shouldn't even bother with this.
Re-assemble taking care of the rubber seal around the keypad and make sure it goes back the way it's supposed to or teh water proofness of the rig will be compromised if ever wet.
When putting the screws back in, here's a trick, rest them into the holes where they go. With your screw driver, slowly turn them counter clockwise with a tad abount of pressure pushing into the holes. You'll feel the screw at some point before a full 360 degree turn make a slight "pop" or "snap". This is it going over it's origional grove. Go a smigeon farther, then reverse and screw it in normally til tight. This'll help preserve the slightly cheap screw holes which are just plastic lined. If you don't do this and repeatedly screw and unscrew the face (you'll have your reasons) you'll eventually wear it down til the screw holes are stripped.

That's how to do just the mars / cap mod...

> I have tried to interrupt the programming by pulling the plug like
> discribed on several sites on the net, but this mod doesn't work. Newer
> firmware ?

Alas, that only worked for early radios to make them go into European mode so that one could listen to cell. But that was before someone discovered the true freeband mod.

If you want a way to modify the radio, without touching a soldering iron, I'll be posting tonight (after getting around to exploring a few things with my radio) to the groups a way to freeband the radio so that it x-mits (or thinks it x-mits) 50 - 540Mhz (really acually only doing about 125 - 230 and 310 - 500mhz) and RX's 50 - 540, 590 - 999mhz will full cell. This'll be done via the interface cable, and won't (or shouldn't, lord knows what Yaesu's policy is on this) void the warranty. But at least you won't have to touch a soldering iron, open the radio's case, buy any additional tools, and you won't even have to re-program your freqs.

Stay tuned...

1726. Cordless Phone Freq

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-17 00:00:00 UTC
From: Someone <Someone@Somewhere.Space.Sun>
Message-ID: <6rdbrf$75$1@nntp2.ba.best.com>
Source record: 134651

Hello,

I have a Yaesu VX-1r and was wondering if anybody else out there has this radio and was able to pick up the cordless phone frequency in the 49/46 MHz freq?

Also, any possible ways to modify the scanner so that you can see the freq display for BC Band???

Thanks!

This posting is for a fellow amateur. Please make sure you reply to him per
the information in this advertisement.

==========

Amateur Radio Equipment---Sale-About half of retail cost.

1. Kenwood TS850AT-All Band HF ----------$950.00
* DRU-2 Digital Recording Unit----------Incld
* VS-2 Kenwood Voice Synthesizer ----------Incld
* YK-88SN-1 Kenwood 1.8 KHZ SSB Filter----------Incld
2. KAM Plus (Kantronics) All Mode RS-232 Interface--$150.00
3. Heil FS-1 Footswitch w/4 foot cable----------$ 10.00
4. Heil HM-10-Dual-K Microphone for Kenwood---------$ 75.00
5. Heil BM-10K-4 Boomset 8 pin Kenwood----------$ 75.00
6. IAMBIC-B Brass Racer IAMBIC Model Keyer----------$ 25.00
7. AL-80B Ameritron 1KW AMP w/3-500Z----------$850.00
* QSK-5PC Ameritron PC Board T/R Switch----------Incld
8. MFJ-989C 3KW Tuner, Roller----------$200.00
9. Connect Systems Private Patch V----------$350.00
* YAE DVS-3 Voice Memory Unit----------Incld
* P5-3 Aux Relay for Private Patch----------Incld
* TSU-32P CTCSS Board - Private Patch----------Incld
10. Yaesu HD 23 SQ FT Rotot/Prset G-1000SDX---------$375.00
11. Rohn 48' HD Tower ----------$100.00
* TB-3 Rohn Thrust Bearing ----------Incld
12. Force C-4 40/20/15/10 Antenna Beam----------$500.00
* Force B-1 Balun Qty two----------Incld
13. Timewave DSP-59+----------$150.00
14. SGC Power Clear DSP----------$225.00
15. Yaesu FT5200 Dual 2m/440----------$400.00
16. Kenwood SM-230 Station Monitor----------$750.00
17. Quantum Ham Battery Pack w/charger----------$ 95.00

All Amateur equipment is about (1) one year old and includes documentation.
I am moving so if interested in the entire package I would be willing to let
the package go for $4,000. That would represent an overall savings of nearly
$1,400 over my already reduced price.

1728. For Sale Kenwood TS570D HF rig via auction

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-17 00:00:00 UTC
From: pjbhk@my-dejanews.com
Message-ID: <6r8enpfcm1@nnrp1.dejanews.com>
Source record: 134661
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Kenwood TS570D, 0-30Mhz HF radio.
Clean, bought Dec. 97, used only a few times.
Original box, mic, no mods.
Leaving country and moving to a land of tiny apartments.

Since I'm not sure what this is worth, I'll let you guys tell me
by bidding on it. It goes to the highest bidder, and to bid you
need to go to www.ebay.com and search for "Kenwood HF rig".

OR YOU CAN CUT AND PASTE THIS UGLY LINE INTO YOUR BROWSER:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=25971724

There is a reserve price of roughly 50% of what I paid in Dec.97.
I don't think thats unreasonable. If I can't get that much, I can always
donate it to a club and write it off my taxes.

AS FAR AS EBAY GOES, I've been selling most of my ham stuff here along with
the rest of the stuff in the place... I got raped on packet, but got my money
out of my HT ($260 for a FT50R) and vhf/uhf mobile ($350 for a TM733). The
SELLERS pay all fees on EBAY, so when you sign up to bid, you won't need a
credit card or anything like that. Just name and address so sellers can
contact you when you win.

73s and good luck
KI6CQ

1729. Re: help ant install on jeep w/glass top

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-17 00:00:00 UTC
From: ve3jtr@rac.ca
Message-ID: <6r9lt8tbk1@nnrp1.dejanews.com>
Source record: 134662

Here is how I mounted my 5/8 wave 2m antenna on my Jeep.

I used a Larsen "L" mount, and mounted it on the side of the engine compartment, in exactly the same spot where the AM/FM antenna is mounted, but on the drivers side. I drilled the three holes into the side of the Jeep (yikes!) and used plenty of silicone to keep the joint dry and avoid rust.

The coax can be easily fed into the engine compartment, and fed through into the cab along with the rest of the wires and such. Works great and looks like a factory installation. I got the L mount that is covered in a black plastic type covering, and a black coil for the 5/8 and it looks great!

Yes. DX4WIN does exactly that. In the Preferences settings you can state your offset from UTC and the program will make the corrections automatically. Great program... and fabulous support. There's a demo version available on the web site: http:\\www.erols.com\pvander

Jeff-

The mag-mount will usually work OK on a large cookie sheet as long as you don't plan to use an amplifier.
My experience has been that an amp will drive the SWR out of sight on such a setup. At 5w, the HT will work reasonably well.

Just another idea: I have used a $17.00 Rat Shack base-model scanner antenna will good success even at 40w, with about 40' of cheepie RG-58 run down through the scuttle hole in my rented duplex to the spare bedroom. SWR is acceptable on BOTH 2m and 440, and the price is right. You can get away even cheaper by using an SO-239 connector and some 14ga. copper wire to make a ground plane with 4 radials. just make the elements 19 1/2' long to start and make sure the radials are at 45 degrees from the radiating element. adjust the angle to get the best SWR.

Have fun!

de Steve, N3RNY

Jeff wrote in message ...
>If I wanted to use a mag mount mobile dual band antenna at my house, is it acceptable to place the antenna on a piece of tim or some other type of metallic surface to form the ground plane? How big of a piece of tin should I use under the antenna? My reason for asking is that I don't need an exotic antenna and due to restrictions I can't have an outside antenna so I would like to put one of my MJF mag mount dual band antenna's in the attic. Any insight or suggestions would be welcomed.

There really isn't anything to compare it to. That's why it has been such a big hit for Icom. I look forward to comparing it to the yaesu ft100 soon. I'm a sucker for these small radios...

You'll get frustrated initially with the complex menuing. You do get used to it...If you are operating mobile and you use phone patch you will need the dtmf microphone. 2 meters at 20 watts is marginally powerful enough. I added an amp...switching in 140 watts sometimes helps when I travel...Plan on buying the narrow filters especially if you do much cw...An outboard speaker is a requirement if you remote it. I'd recommend one anyway just because the puny one they provide isn't adequate in a car when the radio is under the dash or on the backseat. Spec wise it is on par with many other middle of the road radios. I don't have the DSP unit yet but plan to add it soon. Would I buy the radio again? You bet! Love it!

Message-ID: <6r895t$6fp@sjx-ixn3.ix.netcom.com>
Source record: 134677

I just bought my first HF radio, A Yaesu FT-840. I live in an area with the tall high power lines one block east and 2 blocks south of my house. I get a regular S4 to S5 reading of background static. I thought the radio may be bad, but this weekend I went mobile and background noise is almost zero when I get about a mile away (maybe it occurred closer but I am using my parking distance).

Any thoughts on how I can reduce the background noise. BTW, the radio is grounded to a cold water pipe and I an using a Pro_Am Valor hamstick or a longwire of about 40 feet. In both cases I am using an MFJ 969 tuner.

Thanks
Cal

Hi All,

I have an Icom R71A which has an option board installed I would like to identify.

The board is labeled SPRINTPAK and ICOM/AD. It has a RS232 line driver IC (1488) on the board, therfore I assmue it is a type of PC interface.

Any help would be appreciated.

Regards
Aaron

1746. IC-551 6M For Sale

Newsgroup: rec.radio.amateur.equipment

Hi,
My friend Harold, AD4BD has an ICOM IC-551 6 Meter All Mode Transceiver For Sale. This includes the FM board which is very rare and goes from 1-10 watts output. Includes memory channels, 2 VFOs, and a digital display. This radio is in very good condition, the only problem is that the needle sticks at an S5, which is fixable. Harold is asking $450.00 OBO and he will pay for shipping.

Thanks and 73, Tim KU4IY

Rather than cure the noise at your end, maybe you could attack it at source... I had the same problem some years ago, so I went out for a few days around the area - equipped with a large hammer, 7X50 glasses and a low frequency [LW] portable radio. I could hear the noise getting worse if I approached a sub standard 'joint' and I could then inspect the insulator with the binoculars, which allowed me to home in on those with suspect joints. I eventually found that giving the electricity poles a hard whack gave me a different sound on the radio and I eventually came to the offending pole with poor/damaged contacts. When I whacked it, the noise went sky high... The appropriate power authority manager was pleased to send out a team and they very quickly cured the problem...QED - Good luck de Ken/G4MPQ

If all you want is the correct time, and not specifically the Heathkit clock, take a look at the "TAC" kit that TAPR sells. See

www.tapr.org

The TAC uses the GPS satellites as a source of timing information, and is *much* more accurate than the old Heath clock ever was - less than a microsecond error if you choose the right GPS unit, and a few microseconds error if you choose the cheapest GPS. You still may need a display of some sort, but a PC running "showtime" or "Tac32" will do that.

: I have tried to interrupt the programming by pulling the plug like
: discribed on several sites on the net, but this mod doesn't work. Newer
: firmware ?

: Any help would be greatly appreciated.

: Tore

The "pulling the plug" method has not worked for quite a while.
Questions:
1.what are the first 4 characters of your serial #?
2.what mods have been performed already?

If your unit allows it, the standard "BAND-FREE" mod will allow the unit
to go well below 138 mhz!

VSWR measurement, along with knowledge of the Smith Chart, remains a valuable tool. Only if you don't understand what the measurements are trying to tell you can you get into trouble. Unfortunately, the group which doesn't understand is quite large.

>Instrument-wise, what we really need is a handheld, self contained, R + jX
>measuring instrument, 2 digital displays, from 1 to 30 MHz.
>
>Quite possible with modern technology and not too expensive for amateurs.

And two of those do exist, the MFJ259B and the AEA CIA. Of the two, the CIA is more flexible, but the MFJ259B will suffice for many measurements.

They supply a copy of the communication protocol if you send a message to Yaesu tech support about the 847 requesting it. I may have it here, if so, I will attach it to a private email. I can't recall whether I got the Yaesu reply here or at home. If I got it at home, it is not mirrored here. If I got it here, I should still have it.

Go to the yaesu web site and leave a message for tech support about the updated communications protocol for the cat port and I'm sure they will email you an attachment...they did me, and I didn't even ask for it. I was just asking the serial number question to which they replied quickly and accurately. 73

>DAVE....

Since you posted this in the equipment discussion group instead of
in rec.radio.swap where equipment buy and sell posts belong, I feel
free to make some comments about this radio.

The IC-745 has a serious problem dealing with strong signals, as did
a number of other early generation solid state rigs. It easily overloads
due to strong signals on frequency or on nearby frequencies. The IC-735
which replaced it does a much better job of dealing with this problem.
Several critical parts for the IC-745, including the microprocessor, are
no longer available, but you can still get parts for an IC-735.

The IC-745 is still a useful radio, but it is now very far behind the
performance curve. IC-735s sell in the $500 to $600 range, so
asking $500 for your IC-745 is a bit much, even with paddles and
the CW filters. Just a caveat emptor note for any novice buyers
who may not realize what they're getting with this old radio.

> I have a friend who is on his fourth one. RS fixing each of the others 3
> to 4 times each. Buy the extended warranty.

I disagree. My kids and I own a pair of HTX-202's, and although they
have both been in repair, it was due to abuse each time. I hooked up
mine to a shorted antenna, and theirs developed a broken antenna wire.
In general, extended warranties are beneficial mainly to the company ...
which is why they sell them in the first place. Duh. Buy a warranty
only if (a) you are truly paranoid, or (b) you know for a fact it's a
piece of crap. Choice (b) is not true here.

To answer the original poster, the HTX-202 is a solid radio and a good
purchase for a new ham. It is not sexy - nobody ever accused RS of
being a leader in design or features - but it is solid and reliable.
Be careful not to torque the antenna connector by sitting on it while
belt-clipped. The wire inside tends to break. The 202 is more resistant to
intermodulation than other HT's due to its excellent front-end filtering.
It *cannot* be modified to receive outside the ham bands, also due to its
front-end filtering.

The touch tones in 202's typically are set at too high a deviation for
most repeater systems. There are directions on the net for adjusting
them so they work for phone patch, etc. The audio deviation is usually
set too low, on the other hand. Talk with your mouth *very* close to
the mike.

I've heard of sales prices around $150, and *certainly* don't pay the
list price $250. You should be able to get one for no more than $199.

The AEA CIA-HF does not have all the flexibility advantages: the MFJ
covers at least one more amateur radio band than the AEA. In the UK
it covers two more because we have an extra band between 6m and 2m.

One disappointment to me is that, as I understand from Mike N7ML of
AEA, the CIA-HF's PC software will be unbundled and will be sold as
an accessory for an additional price, he guessed maybe around $49.
This was not what I had understood from what I was told at Dayton.

Icom IC-821H Dual Band Sattelite Xcvr, covers 2M & 70 CM. This is Icom's top of the line sattelite rig and works great as a base station too. In mint condition, and complete with all original docs and packaging. Only $1050 Shipped.

Icom IC-W32A 5 watt dual band HT, like new in perfect condition. Transmits on 2M and 70 CM, and had extended coverage on receive. Includes rubber duck, optional leather case, wall charger, and all original docs and packaging. Priced at $250 shipped CONUS.

Also have E.H.Yost rapid smart desk charger, and two additional BP-173 battery packs (1 Icom, 1 E.H.Yost) for the above. These packs were used as reserve spares, and have been used only one time. A complete accessory setup for someone, and priced at only $125 shipped CONUS.

Yaesu FT-8100 Dual Band Mobile Xcvr, Mint with all accessories and original docs and box. Ready to go and works perfectly. This is a super radio, and I've used them with great satisfaction. Priced at $425 shipped CONUS.

All the radios listed above are like new and
are only a few months old. No mods, tweaks, or additions. They are guaranteed to be as represented, and I'll allow a 5 day return privelege on any of them.

TNC's:
KAM Plus dual port TNC, supports HF and VHF packet, as well as CW, RTTY, AMTOR, PACTOR, and a variety of other modes. Firmware level is 8.2. This unit works perfectly, is mint in appearance, and ready to go for only $245 shipped CONUS.

KPC-9612 1200/9600 TNC, excellent condition, firmware level 8.2, with original docs. $145 Shipped CONUS.

Antennae:
M2 Eggbeater for 2 meters, with optional radial attachment. This is the perfect antenna for Mir, has superb radiation characteristics at both low and high angles. Shipped disassembled, with original docs, for $90 shipped CONUS.

M2 Eggbeater for 70 cm, with optional radial attachment. As above except for 440 Mhz. Combined with 2 meter version on a suitable rig, you can work many of the amateur sats. Shipped disassembled, with original docs, for $80 shipped CONUS.

Diamond X50A dual Band compact base antenna. I have used these in my attic with superb results. Compact, just a bit over 4' in length, they provide excellent gain on 2 meters/70 Cm. Includes original docs, brackets and are ready to install. Used only inside my attic, so are indistinguishable from new. Only $70 shipped CONUS.
(2 of these available)

Cushcraft 124WB wideband 4 element 2 meter beam. These are compact with a boom length of about 4 feet, and are super for installation in areas with limited space. I used these in my attic with good results. These are shipped dissassembled and have an extra set of mounting holes midway down the boom. Includes all required hardware and a set of assembly instructions. Only $35 shipped CONUS. (3 units available)

Larsen Dual Band NMO mobile antenna, including trunk lip mount, coax, ready to use with no additional hardware. Used only a few months, perfect working condition, no damage of any sort. $40 shipped CONUS.

Alpha Delta DX-EE shortened dipole, covers 40-10 meters, and WARC bands with tuner. Compact in size, I used it in my attic. Will ship it assembled so you can uncoil it and use it immediately. It is unmodified and has not been trimmed or tweaked. Since it was used in the attic, has no visible wear. Complete with original docs. Only $50 shipped CONUS.

MFJ-259B HF/VHF Antenna Analyzer. this is the NEW version of the best inexpensive antenna tool on the market. This one is only two months old, and was used briefly at field day. Still using the original set of batteries. Also includes the foam carrying case, and a 12 volt external power supply. List value of all this is more than $270, but I'll ship it to you for $210 and pay the freight in the lower 48.

Ameritron RCS-8 Remote Antenna Switch. This will switch 5 antennae to 1 radio, or vice versa. Rated up to 250Mhz, I have used these for 2 meters and below with no problems. Includes local switch box, remote relay box, and I'll include about 60' of PREWIRED connector cable so you don't have to do anything but plug it in. Only $95 shipped CONUS.
(2 units available)

MFJ extended rubber duck for dual-band HT. Full quarter wave on 2 meters for enhanced performance. Like new and fully functional. Only $12.50 shipped CONUS.

MFJ portable 2 meter j-pole. Will roll up and is easily carried in a pocket. $7.50 shipped CONUS.

MFJ-1750 5/8 wave 2 meter ground plane antenna. This is NEW and is in UNOPENED original box. Cheapest good antenna you can get anywhere. Pay me $20 (list price) and I'll ship it ***FREE*** in the lower 48, and no tax either!

Accessories:
JPS NIR-10 DSP in good condition with box and docs. $85 shipped CONUS.

Astron RS-20A Power Supply, 25A rated in perfect condition. Like New! $75, will split freight.

SOLD Astron RS-12A Power Supply, 12A rated in excellent condition. $45, you pay freight.

HM-54 Speaker/Mic for IC-W32A HT, excellent $45 Shipped.

HM-46A Speaker/Mic for IC-W32A HT, excellent $45 Shipped.

Van Gordon 1:1 BALUN New in the package, $10 shipped CONUS.

MFJ-8621 Packet Tranceiver, works fine as a packet rig on it's stock freq of 145.01. Unit is in mint condition, working perfectly, with original docs and box, $80 shipped CONUS.

Diamond SX-200 SWR Bridge, in as-new condition with original docs and box. Bought an MFJ-259B (great piece of gear!) right after I bought this, and never used it. $60 shipped CONUS.

The Legal Stuff:
Terms are postal M.O. prepayment, I'll supply phone # and references if requested. Shipment will be via Priority Mail for small items, UPS ground for radios and expensive items.

Many thanks to all the folks who have purchased items from me recently. Your business is appreciated!

Thanks and 73,
Ron Ricketts WA5VFA

I have a 98 Wrangler and my antenna mount is on the spare tire mount
on the back of the Jeep. You can find several mounts available from
Comet or Diamond that can be modified to fit. My antenna come up
between the spare tire and the rear window.

I have to agree, I bought one new in 95, went in for repairs 5 times before being replaced by them 6 months ago. This one I've had no problems with. The service contract was well worth the money, they even replace the battery if it dies.

1776. Re: ICOM 745

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-18 00:00:00 UTC
From: Don Frank <dhf@writeme.com>
Message-ID: <35D9DF4C.AD7478D8@writeme.com>
Source record: 134459

Gary, I too owned a 745 for about 12 years, and was quite happy with it, but I must admit that I
was not able to subject it to high signal levels, as, due to antenna restrictions, I only had a ground
mounted vertical antenna, and never operated below 40M. I was able , however, to work and confirm over 300 DX countries, and that really is 'work' with a vertical. ;-) The point being that if you can't hear them, you can't work them, and hearing 'them' in a pileup with the California KWs 'over your shoulder', indicates
that in general usage, the 745 was not a poor performer, at least not for me.
WRT phase noise, I would like to direct you to an article in the 1990 ARRL Handbook, dealing with phase
noise, which just happens to give measurements on the 745.(Chapter 10, pages 23, 24) I recall reading this
data in its original publication in an earlier QST.
They conclude that the 745 "phase noise performance generally exceeds(is better than) that indicated by the
"good" curve in Fig 41" . Meaning that it was between good and excellent on the receiver they tested. I'm not suggesting that your measurements and observations were not valid, but you may have had poorly adjusted
units to test. It's an interesting article on Oscillator Phase Noise, that is worth reading.
Gary, I have always enjoyed your commentary on these newsgroups, and have learned from your insightful
observations and analysis. I hope you continue to provide it.
BTW, I sold my 745 so as to buy a 751A, which I had always wanted. I find it to be an excellent package of
features and performance,.....and it does have a switchable input attenuator, in the unlikely event that I ever have a signal too strong for the front end. Please G-D, let that happen ;-)

1778. Help, $$$ research on radios vs salary in the 70's

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-18 00:00:00 UTC
From: nw2m@qsl.net
Message-ID: <6rcu8l$9qn$1@nnrp1.dejanews.com>
Source record: 134461

Think back.... managers....

Radio prices vs salary during the 70's.

I continue to build information on the Yaesu FT-101 web page (http://www.qsl.net/nw2m/ft101.html) and need information on exactly how much it costs to buy a new rig....,actually, how much did you have to spend.

I would like to know what a new graduate's salary would be in the technical fields during the 1970's and a comparable 20 year veteran for the same year. The reason for this is to see how much a radio costs with respect to income during this period (1970-1980). Here is the link to the costs of Yaesu FT-101 radios: http://www.qsl.net/nw2m/ft101.html#prices

It would be neat to see what percentage of salary was needed to buy a new rig then vs. today. I think QST did something on this 10 years ago.

At the classic age of 21, I graduated in 1978 and had offers between $17k in Texas to $21k in Michigan for a BS in Computer Science degree. I have no idea what a 20 year made during this era. I just passed my 20th year this spring, and am outside of the 1980 cutoff my inquiry.

I need ranges of salaries (not yours) and in what technical area (computers, electronics, etc.). No names need/will be mentioned, and you can email me direct to: mailto:aor@gteais.com I will average the data and add this as a percentage to the top of the "What did it Cost" section to my web page.

Thanks in advance. Any help is a BIG help. If there is a link to labor statistics in the 70's... all the better.

I will keep you posted on this info as it is posted to the page.

73,

Al, NW2M

Yes, they sent me a copy of the updated bidirectional protocol and will send you one via email if you ask for it.

Also, Log-EQF now supports bidirectional communication with the FT-847...Tom worked on it over the last five days and I was one of the beta testers. He got it working perfectly yesterday and I am using it right now.

Hello Name is Dennis....
I have for sale a Kenwood SW-2000 swr/pwr meter with the swc-3 coupler
1.8-54 mhz,0-200 watts & 0-2000 watts.
On a scale from 1-10 it is a 7-8,there is a blemish on the top right
edge of the metal case,no scratches
or dings just a faded paint blemish,there has also been a resistor
replaced for the lighting to work.
Meter works great and is accurate!!!
Tired of looking for the optinal couplers,for vhf/uhf, yes this will
also work on vhf/uhf but must have
the swc-1 or swc-2 for that.
I dont have the box that it came in but I do have the manual,service
papers,power cord for pep &
lighting.
I will ship it to ur door for $90.00
Sorry no COD'S

1789. ft-50rd problems after freeband mod

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-18 00:00:00 UTC
From: simpsora@colorado.edu
Message-ID: <35da0b8a.7696066@nntp.netcruiser>
Source record: 134472

Hey all..

I just did the software freeband mod to my ft-50. it worked fine -- all the advertised frequencies come in now.

however, i have a small problem. it seems that the mod somehow affected the squelch. sometimes the squelch will open, even if there is no traffic on the frequency (checked with another radio). it doesn't happen all the time, but it does happen sometimes, and it makes it hard to scan.

anyone know what might have happened? i _may_ have accidently changed one of the settings around BAND and the signal meter settings. would that cause the problem?

any help is appreciated. thanks.

Icom IC-821H Dual Band Sattelite Xcvr, covers 2M & 70 CM. This is Icom's top of the line sattelite rig and works great as a base station too. In mint condition, and complete with all original docs and packaging. Only $1050 OBO Shipped.

SOLD Icom IC-W32A 5 watt dual band HT

Also have E.H.Yost rapid smart desk charger, and two additional BP-173 battery packs (1 Icom, 1 E.H.Yost) for the above. These packs were used as reserve spares, and have been used only one time. A complete accessory setup for someone, and priced at only $125 shipped CONUS.

Yaesu FT-8100 Dual Band Mobile Xcvr, Mint with all accessories and original docs and box. Ready to go and works perfectly. This is a super radio, and I've used it with great satisfaction. Priced at $425 shipped CONUS.

All the radios listed above are like new and
are only a few months old. No mods, tweaks, or additions. They are guaranteed to be as represented, and I'll allow a 5 day return privelege on any of them.

TNC's:
KAM Plus dual port TNC, supports HF and VHF packet, as well as CW, RTTY, AMTOR, PACTOR, and a variety of other modes. Firmware level is 8.2. This unit works perfectly, is mint in appearance, and ready to go for only $245 shipped CONUS.

SOLD* KPC-9612 1200/9600 TNC

Antennae:
SOLD M2 Eggbeater for 2 meters

SOLD M2 Eggbeater for 70 cm

Diamond X50A dual Band compact base antenna. I have used these in my attic with superb results. Compact, about 5' in length, they provide excellent gain on 2 meters/70 Cm. Includes original docs, brackets and are ready to install. Used only inside my attic, so are indistinguishable from new. Only $70 shipped CONUS.
(2 of these available)

SOLD Cushcraft 124WB wideband 4 element 2 meter beam

Larsen Dual Band NMO mobile antenna, including trunk lip mount, coax, ready to use with no additional hardware. Used only a few months, perfect working condition, no damage of any sort. $40 shipped CONUS.

Alpha Delta DX-EE shortened dipole, covers 40-10 meters, and WARC bands with tuner. Compact in size, I used it in my attic. Will ship it assembled so you can uncoil it and use it immediately. It is unmodified and has not been trimmed or tweaked. Since it was used in the attic, has no visible wear. Complete with original docs. Only $50 shipped CONUS.

MFJ-259B HF/VHF Antenna Analyzer. this is the NEW version of the best inexpensive antenna tool on the market. This one is only two months old, and was used briefly at field day. Still using the original set of batteries. Also includes the foam carrying case, and a 12 volt external power supply. List value of all this is more than $270, but I'll ship it to you for $210 and pay the freight in the lower 48.

Ameritron RCS-8 Remote Antenna Switch. This will switch 5 antennae to 1 radio, or vice versa. Rated up to 250Mhz, I have used these for 2 meters and below with no problems. Includes local switch box, remote relay box, and I'll include about 60' of PREWIRED connector cable so you don't have to do anything but plug it in. Only $95 shipped CONUS.

MFJ extended rubber duck for dual-band HT. Full quarter wave on 2 meters for enhanced performance. Like new and fully functional. Only $12.50 shipped CONUS.

SOLD MFJ portable 2 meter j-pole

MFJ-1750 5/8 wave 2 meter ground plane antenna. This is NEW and is in UNOPENED original box. Cheapest good antenna you can get anywhere. Pay me $20 (list price) and I'll ship it ***FREE*** in the lower 48, and no tax either!

Accessories:
JPS NIR-10 DSP in good condition with box and docs. $85 shipped CONUS.

Astron RS-20A Power Supply, 25A rated in perfect condition. Like New! $75, will split freight.

HM-54 Speaker/Mic for IC-W32A HT, excellent $45 Shipped. (2 units available)

HM-46A Speaker/Mic for IC-W32A HT, excellent $45 Shipped.

Van Gordon 1:1 BALUN New in the package, $10 shipped CONUS.

MFJ-8621 Packet Tranceiver, works fine as a packet rig on it's stock freq of 145.01. Unit is in mint condition, working perfectly, with original docs and box, $80 shipped CONUS.

Diamond SX-200 SWR Bridge, in as-new condition with original docs and box. Bought an MFJ-259B (great piece of gear!) right after I bought

this, and never used it. $60 shipped CONUS.

The Legal Stuff:
Terms are postal M.O. prepayment, I'll supply phone # and references if requested. Shipment will be via Priority Mail for small items, UPS ground for radios and expensive items.

Many thanks to all the folks who have purchased items from me recently. Your business is appreciated!

Thanks and 73,
Ron Ricketts WA5VFA

I just want to say that I have used LOG-EQF for several years and it is great.
You will not find another program that is supported by the writer as well as
this one. Tom does a great job.

Try pushing both the squelch and band buttons while you turn on the radio.
This will allow the radio to be used in extended receive. Probably the best
mod of any HT around!

I've had the exact opposite problem, the old button was so big that it always
came on if anything bumped it. I finally replaced it and have yet to have the
problem. The new button is slightly shorter than the old one, alleviating the
problem.
Having performed the swap and having taken the radio apart to do it, let me
tell you, it was pretty easy, easier than I thought. Just two screws to unscrew, and
the rest of the case unsnaps and slides apart. The only frustrating part was making
sure the rubber seals went into place properly when reassembling.

1807. Here's how to do the FT-50 software mods...

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-18 00:00:00 UTC
From: "Jack T.Dragon" <tdragonn@blarg.net>
Message-ID: <35DA63F7.70D0@blarg.net>
Source record: 134490
Cross-posted to: rec.radio.swap,alt.radio.scanner,rec.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Keep in mind that this is a beta posting and the faq will be re-written and cleaned up over the next couple of months. This is just a first draft. Any suggestions, please feel free to e-mail me, my address, and info on how to un-anti spam it, is on my sig below.

-----begin file-----

FT-50 software mod faq v.01

This faq was written based on an article by another who's name was lost. Credit for the idea goes to that person, but some credit goes to me for re-writing it into a simpler and easier to understand form for those unfamiliar with hex editors.
The following information is based upon exploration and tests performed with an FT-50 with 6H07 as the first four serial numbers, and ADMS software v1.04 for Windows.
Legal stuff: Transmitting outside of legally allowed bands is quite illegal, so just don't do it. This is even true if you have a liscense to operate on other bands and have other business radios that do that. The FT-50 isn't type accepted to x-mit on any other band other than amateur freqs and for MARS / CAP use.
By performing any of the following mods, you take full responcibility. If you get caught doing anything illegal or if you screw up your radio, don't come whining to me, it's your fault, not mine.

Now, the faq:

q.) What is the software modification and how does it differ from the hardware modification?

a.) The FT-50 is rather unique in the fact that unlike other radios where a series of diodes or resistors that connect to the CPU from outside of it and specify what frequencies the radio can operate on, the FT-50 stores this information as a series of two bytes of information in it's RAM in the CPU. No hardware is used at all to specify or control these bytes. The hardware mod above does nothing more than let you change these bytes with a menu system built into the radio. Removing the chip resistor in and of itself dosen't free anything up other than letting the user access this menu system.
Removing the blob of solder governing the MARS/CAP access is another thing. This is the only mod that is hardware affected. But it is possible for one to not FrEEband the radio but instead MARS/CAP the radio by the same software mod. But this dosen't change the country settings or let one switch to FrEE mode like the true software mod does.

For the software mod all one needs for tools is a Hex editor for
their computer, a personal computer, and the ADMS-1x interface kit.

q.) Hex editor, What's that?

a.) A hex editor is a program to edit a computer file at it's most
basic level, the individual hexadecimals.
Hexadecimals work like this: thay're just like the standard numeric
system, but they go a little farther. Like 0,1,2,3,4,5,6,7,8,9 then
repeating is what we're all familiar with, but hex numbers work like that
but 0,1,2,3,4,5,6,7,8,9,A,B,C,D,E,F then repeating. So 45 would be 2D in hex
or 2Dh. 157 would be 9Dh, 07 would be 07h, etc. The calculator that comes
with Windows does hex conversions so you can play around with them.

q.) How do I use a hex editor?

a.) Here's a crach cource for hex editors, you can read the readme and
help files that come with the editor to learn how to use it in more detail.
When you open a file, you'll see the following:

00000000 47 49 46 38 39 61 01 00 01 00 80 00 00 FF FF FF
GIF89aï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½
00000010 00 00 00 21 F9 04 01 00 00 00 00 2C 00 00 00 00
ï¿½ï¿½ï¿½!ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½,ï¿½ï¿½ï¿½ï¿½ï¿½
00000020 01 00 01 00 00 02 02 44 01 00 3B ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½Dï¿½ï¿½;

This is a 1x1 transparent GIF that I use on my web page, But you get
the idea.
The pairs of hex numbers represent a single byte.
On the left side is where you are, in the middle is the acual hex
itself, and on the right is a plain text translation of what the hex
represents.
You change the values by clicking on an individual hex character
with your mouse. It'll then start blinking. Now let's say you want to change
FE to 09, you wouldn't type in 9, you'd press 0 then 9 on teh keyboard. The
cursor will then go to the next hex to edit. You can use the arrow keys to
move the cursor up and down, back and forth. The only keys that'll work are
the 0-9,a,b,c,d,e,f, arrow keys and the tab key when within the hex side.
The a,b,c,d,e, and f are case insensitive, so you can have the caps lock set
to whatever you fancy.
By clicking on the plain text side or pressing the tab key you can
switch to full text mode. Here, whatever key you press on the keyboard,
except for the tab key, will generate ASCII text on the text side and hex
values for that text on the hex side.
So if you type in "Text Goes Here" you'll get:

00000000 54 65 78 74 20 47 6F 65 73 20 48 65 72 65 Text Goes Here

With hex editors when you type in text or change characters, the
rest won't move around like with Notepad or other text editors.
And finally, when you chenge any of the hex or text, what has
changed will change color from black to red. The acual colors may vary from
hex editor to hex editor.

To summorize, to change a 04h to a 6Eh, open the file into your hex editor. Scroll the side bar to where the byte is that you're interested in. Click on it with your mouse, then press "6" followed by "e". The hex char will change color and your cursor will move to the next char. Then select the "File" then "Save" from the menu. The color of the byte will return to what all of the other chars are, but the cursor will remain where it was left. You can now close the hex editor with your altered file now saved.

q.) Where can I get a hex editor from?

a.) They're all over the place. Search for one in Yahoo or Alta Vista. My hex editor of choice for the beginner and for occassional use is HEdit by Yuri Software. You can use the FTP search engine http://ftpsearch.ntnu.no/ and search for "hedit" to locate a copy of HEDit on a FTP server the 'net somewhere.

q.) Now that I know what a hex editor is and roughly how to use it, how do I use it and my ADMS interface kit to modify my FT-50?

a.) Ok, now onto the fun stuff, how to do the software mod itself. The ADMS computer interface let's one dump or download all of the information stored in the FT-50's ram. This is then manipulated and changed by the incuded software, and then uploaded back to the FT-50. When the memories are in the radio itself, there's no way to edit the individual bytes, but after downloading to the PC, it's quite vulnerable and can be easily edited and changed to whatever the user fancies then re-uploaded back to the radio. The only secret is knowing what bytes need be altered, and here thay are:

First, download your memory from the radio and save it as a file. This following information is based on tests done with ADMS software v1.04. If the files your ADMS software saves files that are 9184 bytes in size and have the extentions .TPL or .RDF then you can most likely alter the country byte. If you find that you can't alter this byte because Yaesu has had RT Systems change their ADMS software to not let users do this anymore, then you can get an older copy of the ADMS software from a friend or someone else who has it.
The two bytes that govern the country code are located at 5E3h and CE7h. Your hex editor should show you what byte you're on at the bottom of the screen.

000005E0 02 24 03 01 00 24 00 80 21 08 00 00 14 69 50 00
ï¿½$ï¿½ï¿½ï¿½$ï¿½ï¿½!ï¿½ï¿½ï¿½ï¿½iPï¿½
^ this one (5E3h)

00000CE0 FF FF FF FF FF FF 03 01 03 01 04 FF FF 64 40 FF
ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½d@ï¿½
^ and this one (CE7h)

In the example, some of the other bytes will vary from radio to radio, so don't be suprised if yours looks a little diffrent. But the country byte should be at 01 if your radio was sold in America.
The first byte is more of a security or protection byte that's supposed to keep you from doing what you're about to do. It must be set to

what your radio currently is at, or left alone, depending on the situation.
The second is what you change to get your radio to what country you
want it set to.

So, in order to freeband the radio, first download what's currently
in the radio and save it as a file. Now open it into a hex editor and find
the bytes of interest to you. You wouldn't change the first byte, but you'd
leave it alone. All you'd change is the second byte. You'd set that byte to
06 in order to freeband it:

000005E0 02 24 03 01 00 24 00 80 21 08 00 00 14 69 50 00
ï¿½$ï¿½ï¿½ï¿½$ï¿½ï¿½!ï¿½ï¿½ï¿½ï¿½iPï¿½
^ 5E3h

00000CE0 FF FF FF FF FF FF 03 06 03 01 04 FF FF 64 40 FF
ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½d@ï¿½
^ CE7h

You'd now save the file, then switch to the ADMS program and re-open
your file. Now upload it to the radio. If you get a CERR message on the
display, something went wrong either with the upload / download process, or
when you altered the byte. But 99.99% of the time, things will go without a
hitch.
Now confirm that you're radio has been freebanded by going into a
VFO and extering 50.00mhz. If it accepts this, then try and x-mit on this
freq. The radio should not x-mit, but make a pop sound for an instant then
just sit there not x-mitting. But you'll notice no "ERROR" being displayed
on the screen. If this happens, the radio has now been freebanded.
If all you're doing is freebanding is a friend's radio, you'd stop
here, but there's a problem if you have lots of other FT-50 memory files
stored that you use. If you try and upload them, you'll get an instant CERR
message if you try and do so.
So, you'll need to alter all of your other data files to match the
new country code setting.
Go in with your hex editor and change both the security byte and the
current country byte so that they both match the radio's current settings.
Like this:

000005E0 02 24 03 06 00 24 00 80 21 08 00 00 14 69 50 00
ï¿½$ï¿½ï¿½ï¿½$ï¿½ï¿½!ï¿½ï¿½ï¿½ï¿½iPï¿½
^ 5E3h

00000CE0 FF FF FF FF FF FF 03 06 03 01 04 FF FF 64 40 FF
ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½d@ï¿½
^ CE7h

You'll need to do this with all of your files, but then they can all
be used again.
If you want to reverse the freeband mod and go back to the country
code you had before, simply follow the above instructions, but use 06 as the
country you had before, and 01 (or whatever other country you want to use)
as the country you're going to set it to. Like:

000005E0 02 24 03 06 00 24 00 80 21 08 00 00 14 69 50 00
ï¿½$ï¿½ï¿½ï¿½$ï¿½ï¿½!ï¿½ï¿½ï¿½ï¿½iPï¿½
^ 5E3h

00000CE0 FF FF FF FF FF FF 03 01 03 01 04 FF FF 64 40 FF
ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½d@ï¿½
^ CE7h

q.) But from the old hardware mod I remember things like "BAND_B2a".
What you just said only changes "BAND_x2a", so how do I change the sub part
after the letter?

a.) That "BAND_B2a" stuff is part of the radio's internal menu system to
change the country code settings. The letter is the country, while the
number and letter after it specify details about the country. Like 1 is
without extended recieve where you can only recieve on the freqs you can
x-mit on and 3 is standard operation but with the ability to recieve almost
anywhere, like it normally is. The 2a and 2b settings involve the MARS/CAP
mod, and I have yet to explore those.

q.) So, how do I change the sub country setting with the software mod at
the same time?

a.) I haven't had much success doing this, but I soon hope to have this
cracked. From what I've been able to figure out, two bytes govern the sub
country setting. These are:

00000CE0 FF FF FF FF FF FF 03 01 03 01 04 FF FF 64 40 FF
ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½d@ï¿½
^ ^
| CE9h
CE8h

CE8h is the main one, it's at 00h for "1", 01h for "2a", 02h for
"2b", and 03h for "3".
CE9h controls the extended recieve. It's set to 00h for no extended
recieve and 01h for extended recieve.
If I change just CE8h then the ADMS software corrects the file and
set's it back to 03h if CE9h is 01h, and back to 00h if CE9h is 00h. It also
does this if I set it to 01h and 02h. :(Some byte needs to be set to
specify a MARS/CAP mod.
The good thing about this is that there's no security byte, you can
change these bytes to your heart's content in whatever file you want.
I'll soon have this cracked, but keep in mind that this is just a
beta FAQ.

q.) Well, have you at least figured out what all of the country codes
do?

a.) Most of them. Figuring out what the frequency bands took long enough,
I admidt to getting lazy and not figuring out what the default repeater
splits are, and what the other country codes do to other default settings.
Hey, it took me long enough to figure out what I did figure out.
Here's the byte settings as they relate to the old hardware mod:

```
| 00 01 02 03 | <- sub-country byte (CE8h)
---+---------------------+
00 | F1 F2a F2b F3 |
01 | A1 A2a A2b A3 |
02 | B1 B2a B2b B3 |
03 | C1 C2a C2b C3 |
04 | D1 D2a D2b D3 |
05 | H1 H2a H2b H3 |
06 | FrEE FrEE FrEE FrEE |
---+---------------------+
^- main country byte (5E3h & CE7h)
```

Here's what country each country byte goes to:

```
---+------------+
00 | ? |
01 | America |
02 | ? |
03 | ? |
04 | ? |
05 | Canada? |
06 | Freeband |
---+------------+
```

Hopefully someone can fill me in with what country codes go what
countries that I've lsited as "?".

q.) What bands does each country code let you operate on?

a.) Glad you asked, I spend three hours making this table:

```
country sub-byte (CE8h)
| 00 | 01 | 02 | 03 |
---+----------------+----------------+----------------+----------------+

I stopped hamming 15 years ago but recently got bitten by the bug again. I have purchased a used Kenwood TS 820s ;condition unknown. The receiver works but I haven't done a tune up in so long that I have forgotten how and I don't have the owners manual. Can some one please send me the procedure so I can see if it works ?

> -art clemons-

Seems to me that the FCC could delegate certain investigative functions within very clear evidentiary guidelines to the Amateur Auxiliary. If the evidence is then brought before an FCC official by the AA (with due notice to the accused) the FCC official can then decide if the FCC should further evaluate the evidence or stamp it approved and pass it on to the administrative law judge with a recommendation to act. This provides a buffer prior to the court but doesn't bog things down unnecessarily. 73, DavidC AA1FA

1816. FS: Icom IC-745 HF Transceiver

This is a kind of tail wagging the dog question. I live in a very small apartment, so when I get around to buying my first radio, it is going to hve to have a "small" antenna and a power output that won't fry my brain. So, what frequencies (tech level) should I consider?
Dennis

1823. What is a reasonable price for an ICOM IC3AT - the 220 version?

Hi,

As above, Icom IC-2SET 2 Metre HH for sale, good condx.

With case, charger, manual, antenna, carry strap.
With NEW internal NiCads fitted recently.
With CTCSS encode/decode board fitted.
Includes extra NiCad battery pack with new 750 mAh NiCads.
Includes charging adaptor for external NiCad pack.

AM airband RX, Marine etc.
Wide TX (USA etc)

All for only ï¿½90

Phone 01728 643020
Mobile 0411 192016

Email - bill.rothwell@bt.com
Also - bill.rothwell@btinternet.com

Cheers, Bill G0VDE.

39. SENCORE SUPER CRICKET Transistor / FET Tester TF 46
40. SENCORE AC "POWERITE" VARIABLE ISOLATION TRANSFORMER & SAFETY ANALYZER

MODEL PR 57
41. SENCORE UNIVERSAL VIDEO ANALYZER MODEL VA 62
42. SENCORE NTSC PATTERN GENERATOR MODEL NT 64
43. SENCORE COMPUTOR MONITOR ANALYZER CM 2000
44. SENCORE AM / FM STEREO ANALYZER MODEL SG 165
45. VIZ PULSE GENERATOR MODEL WR 549A
46. POWER SUPPLY AC ADJUSTABLE
47. SENCORE WAVEFORM ANALYZER MODEL SC 61
48. B&K SUBSTITUTION MASTER RESISTOR / CAPACITOR MODEL 2902
49. SENCORE CB ANALYZER MODEL CB 42
50. SENCORE VIDEO ANALYZER STEREO TV ADDER MODEL ST 65

Most of the test leads and probes that go with the items are still there. Some are factory Made and some are hand made. We also have old electronic magazines, sams, microfiche, electronic trouble-shooting helps etc. If you are interested in any of these things please contact Ron Long at:

isabjorn@aol.com

Serious inquiries only please.

1828. Re: What is a reasonable price for a simple 6 MTR FM rig?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-18 00:00:00 UTC
From: erlpnk4yz@aol.com
Message-ID: <1998081808021800.EAA20511@ladder01.news.aol.com>
Source record: 134526

Dear Bil,

For a new rig?...Yep, $50 won't even get you the manual! But if you like
to build, TenTec has a neat little line of FM transceivers for the V/UHF bands.
The 6M version is about $195.00

Also, Ramsey Electronics has a low-band VHF-FM rig that covers 40-60MHz
for about $140. It is also a kit.

Want one ready to plug and play?...Get out the check book or look for a
used rig!

73

Steve, K4YZ

PS: TenTec and Ramsey both have "catologs" on-line.

The NiCad Lady
17052 Alameda Drive
Perris, California 92570
(909) 789-0830
FAX (909) 789-4895

She has FNB-27 NiCads - like the original Yaesu product. But she also has NiMH cells with over 50% MORE CAPACITY in the same size pack.

Her Web site is at:

http://nicdlady.com/index.htm

MAHA also makes excellent battery packs - they're available at Ham Radio Outlets nation-wide.

What is a wrong with using the telephone and calling HRO? The call is toll free and they take plastic credit cards or cashiers checks or cash and they know exactly what a Yaesu FT-530 is. Of course there are other stores but probable the telephone will be the easiest method of communicating with them.

1835. Re: Band allocations at 420-432... Repeater?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-18 00:00:00 UTC
From: wmunsil@aztec.asu.edu
Message-ID: <6rbuf5$e8c$1@news.asu.edu>
Source record: 134533

In CA and AZ the Cactus Inter-tie - a closed system of "by invitation only" remote bases and repeaters operate between 420 - 430.

In response to the comment concerning ATV causing interference with FM: it has been demonstrated that as long as plus/minus 1 MHz on either side of the video carrier and plus/minus 100 Khz on either side of the audio and color subcarriers is left vacant, there IS no interference. This info from W6ORG, ARRL expert for HAM-TV and a major, longtime ATV equipment manufacturer.

From: ke4zv@bellsouth.net
Message-ID: <3615755e.712440084@news.atl.bellsouth.net>
Source record: 134534

On Mon, 17 Aug 1998 08:02:56 -0700 (PDT), Mrchess@webtv.net (dave archer) wrote:
>I think you are wrong I have never had any promblems with my radio ,I
>have been very happy with it,and I think you don't know what you
>areï¿½talking about

Back when the IC-745 came out, I bought one. Operating it side by side with a Drake R4C (a moderately good receiver of the tube era), it crunched badly. When copying the AMSAT 75m net, the overloading caused by activity on adjacent frequencies wiped out much of the net. By contrast, the R4C was able to handle it and allow reasonable copy. To make sure it wasn't just a broken radio, I borrowed two others, they behaved the same.

I pulled out the instruments to determine what was wrong with the design of the IC-745. I found that it had relatively high levels of phase noise in the synthesizer. This generated mixing products with the adjacent channel signals which then fell inside the IF passband. The front end and first mixer also had a relatively low IP3. I looked at the possibility of modifying it, but decided that would require too much rework to be practical. So I consigned it to less demanding roles and retained the Drake Twins for occasions when I had to pull signals out of a congested band.

When the IC-735 came out, I bought one of those. For the first time, I had a solid state rig that bested the R4C. It would copy the net at least as well as the R4C, and sometimes better. So I finally retired the tube gear. Now while the IC-735 design is quite long in the tooth today, it is still a reasonably competitive rig, though not what we'd call contest grade today. But the IC-745 wasn't even competitive with its tube predecessors, much less with more modern designs.

If you don't make much of a demand on the IC-745, then it can suffice for casual use, but it isn't very good compared to either its tube predecessors or more modern solid state gear. If you think it is, then I'd suggest you've never done side by side comparisons with it against good equipment under congested band conditions.

There are certainly worse radios on the used market than the IC-745, but there are also much better ones in the same price class as what you're asking for your IC-745. So a caveat emptor is warranted.

FS: Yaesu FT-50RD, $259 shipped conus.

Dual band, 5 watts RF out.
S/N 7L231336. 6 months old. Like new condition. Only used for 2
QSOï¿½s. With original packaging and accessories. Includes:

FNB-41 9.6v, 600 mA nicad battery pack.
NC60B battery charger
FTT-12 DTMF keypad with digital recording, CTCSS decode
DTMF paging, and DTMF code squelch.

No mods have been performed, and I have no knowledge about modification
potential for out of band transmit, cell band receive, etc.

Reason for selling: I just donï¿½t use it (strictly on HF these days) and
this fine radio should belong to someone who will enjoy it.

Your choice of terms:
1. I will pay shipping and insurance. I will ship UPS ground same day I
receive your postal money order or cashiers check, and email you with
the UPS tracking number. ORï¿½
2. I will ship UPS C.O.D. for the balance after I receive a $20 deposit,
but you pay the shipping, insurance, and COD fees (appx. $10-15) on top
of the sale price.

Any other questions, please ask.

But OTOH, it uses a crystal referenced synthesizer which can be used
as a signal generator as well as a swept source for the impedance
bridge. It produces frequency plots of the various antenna parameters,
and can display them in graphical or tabular form on its LCD screen.
It also has an impedance matching calculation ability built into it.

>One disappointment to me is that, as I understand from Mike N7ML of
>AEA, the CIA-HF's PC software will be unbundled and will be sold as
>an accessory for an additional price, he guessed maybe around $49.
>This was not what I had understood from what I was told at Dayton.

That's not much of a disappointment to me. In my discussions with
him I emphasized that the important feature was a documented data
dump from the instrument that we could easily analyze with our own
programs. As long as that is available so that we aren't trapped into
a proprietary PC software solution, I am content. After the Icom
PCR1000 fiasco, I am very leery of being trapped into a proprietary
software solution.

> price range?

There aren't a lot of good new rigs in that price range, but some very
good used equipment can be had around $900-1100.

Some candidates would be Icom-761, 765, Yaesu 890, 990, Kenwood 850, 940,
early 950's.

Shop around, including places like Burghardts, AES, etc.

73 and tight lines,

Hans, K0HB

From: Robert Lyons <boblyons@umich.edu>
Message-ID: <35D9BD33.95B23D40@umich.edu>
Source record: 134551

Does anyone know how much power an MFJ antenna analyzer puts out?
They advertise that you can tune up antennas 'without creating QRM',
but this isn't quite true. A while back, I was tuning up a 2M yagi
and noticed that I was keying up a repeater about 2 miles distant.
So - anyone know their output?

Bob, KI8AB

Source record: 134553

I'm way over stocked on some Sams Photofacts sets & I want to get rid of them so the following prices apply until the excess Sams are all gone. ONLY $1.50 PER SET (per SET, not per folder). 10 sets $7.50, 25 sets $12.50, 50 sets $20.00 & 51 or more sets at $0.25ea. All + S&H.

For a list of available numbers please visit my web site at
http://www.vintage-electronics.com
click on "Schematics" & check out the RED SALE SECTION down near the bottom of the page.
While visiting the site you may also find a radio or two that you'd like to have among the 2-300 sets that are listed. Also have some tube audio equipment, communications gear, test equip, vintage tubes & other collectible electronics.
Thanks
John

Source record: 134656

You can try VN10KM + VN66AF (or VN67AF) V-MOS switching transistor. They are not too expensive, works well at 2m and provide a good linearity. Maximum HF power is 2,8W (with 13V). Supply is 12 to 15V.
I got a (tested) 2 stages description using VN10KM + VN66AF.
It uses no exotic parts. With 60mW, you get 2,8W. So a 6 or 7dB attenuator before will do the job.
If you want, I can scan the description (in french) and email it to you.

>the performance?

I haven't tried one myself, but others have commented that the little
SMA-501 works about as well as any other dummy load. In other words,
not well at all - but OK for very short range.

The best antenna I've found is the Comet SMA-3. It's about 3 inches
longer than the stock antenna but works much better. Another one
worth looking at is the Comet SMA-503. It has a very thin "rat tail"
wire radiator with a stubby matching assembly at the base. The
non-flexible part of it is shorter than the SMA-501, so it has even
less "rib poking" power. The rat tail is very flexible. Total
length is a bit less than the SMA-3, but still longer than the
stock antenna. It works better than stock, but not quite as well
as the SMA-3. Despite this, the 503 is what is on my FT-50 most
of the time.

It takes an infared filter. Success probably depends on how hot the subject is.

> recently. They charged one hour labor and replaced the memory backup battery
> located in the "body" of the radio. Any suggestions?
>
> Harold
> AC5QY

There are several common causes;
1. Blown fuse(surface mount internal to radio
2. Cold solder joint on switching resistor
3. Damage to control board by leaking battery(traces eaten in two)

No 1. can be caused by unplugging the head while the radio has power to
it.

Sometimes can be solved by a hard reset(removing battery and letting
voltage bleed off).

Tony,

My old Tri-Ex catalog lists this as a guyed crank-up tower with 20 ft sections. The tower guy kits consist of 9 guys totaling 480 ft. It uses guys at 3 levels of the tower (every section) attached 32 feet out from the base. The date stamp on the catalog is Jan 15, 1969.

That is all the info I have.

I agree. The SMA-3 no doubt has the best performance, but I was thinking of it size. Hiking or skiing for example. The long SMA-3 would probably be little too bulky to carry on your side or in your inside pocket for skiing.

Is the SMA-501 really that bad?! Worst than the stock FT-50R antenna?

Source record: 134434

Ross wrote:
>
> anyone know what might have happened? i _may_ have accidently changed
> one of the settings around BAND and the signal meter settings. would
> that cause the problem?

Yep. If you accidentally changed settings in the "alignment menu"
like THSQ, TISQ, S1LV, or S9LV, your radio is basically hosed up
for good, unless you want to send it back to the factory for re-
alignment, or know a friendly ham or other RF technical guru with the
right equipment to put it back into shape.

These settings ARE NOT MADE BY ROTATING THE KNOB. In other words,
you can't turn them up or down like the other settings.

You set the THSQ setting by picking that option, injecting an RF
signal at -13dbu (or -43dbm if my brain is working right tonight)
and double-press the knob to "tell the radio" that this signal is the
proper strength to set the "Squelch Preset Threshold", then rotate the
knob to move on to TISQ. Here you inject a -5dbu signal, double-press
the knob, then rotate it to move on. And so it goes.

I screwed up mine accidentally. I guess I got "lucky" when my SMA
connector broke while the radio was still under warranty, and when
they fixed the connector they graciously re-aligned it too. (No, I
don't recommend busting your SMA connector to get a free re-alignment.)

Good luck.

Hello, all!
I would like to buy an FT-154 shock mount assembly for a BC-348.
Will be used as part of my ongoing assembly of a working WWII
aircraft radio display. Let me know if you have one to sell. Many
thanks!

Isecond the motion DX4WIN. I used DXBase for several years but Like
DX4WIN better been using it 10 Mo now. I have over 25,000 QSO's in the
database going back 25+ years. never had a problem by all means down
load the demo

LOG-EQF also has this feature, and, as with the rest of the program it works great. Use it in DOS, WIN 3.1, WIN 95 or WIN 98. About the only thing it won't run on is an abacus.

FS: Radio Tubes-Updated List

I have a number of rf and other small triodes & pentodes for sale. All are NOS, and all are tested for transconductance on my TV-7. Here's the list:

(5) 6F6 metal $5.50 ea.
(6) 6K6GT Sylvania, GE $4.00 ea.
(8) 6K6GT RCA $6.00 ea.
(15) New or used, tested 12BY7A $7.50 new, $3.00 ea. used
(6) 12GN7A $3.50 ea.
(50) 6CB6/A $2.00 ea.
(8) 6CM6 Sylvania (min. version of a 6V6) $3.50 ea.
(5) 6AR5 $4.50 ea.
(1) 6GK6 $4.00
(Many) 6AU6/A good US brands $3.75 ea.
(5) 6JD6 $2.50 ea.
(10) 6BH6 $3.00 ea. (4) 6JH6 $8.00 ea.
(5) 6JC6A $3.50 ea. (2) 6EH7 $2.00 ea.
(0) 6DL5 (2) 6EV5 $3.00 ea.
(10) 6AK5 $3.50 ea. (5) 6FV6 $1.50 ea.
(4) 6BZ6 $2.50 ea. (10) 6GY6 $2.50 ea.
(10) 6CL6 $3.00 ea. (3) 6HB6 $2.50 ea.
(4) 6CF6 $2.50 ea. (5) 6DK6 $2.00 ea.
(8) 6AC7 $2.50 ea. (3) 6GM6 $4.00 ea.
(20) 6AG5 $1.50 ea. (5) 12AF6 $2.00 ea.
(20) 6BA6 $2.50 ea. (10) 12SK7 $2.00 ea.
(13) 6BC5 $2.00 ea. (6) 12BD6 $2.00 ea.
(10) 6BJ6 $2.00 ea. (12) 12BL6
$1.50 ea.
(8) 6CY5 $2.50 ea. (3) 12DT5 $1.50 ea.
(15) 6BN6 $3.00 ea. (3) 12ED5 $1.50 ea.
(8) 6DE7 $2.50 ea. (1) 12EK6 $2.00
(6) 6DT6 $ 1.50 ea. (3) 12AB5 $2.50 ea.
(2) 6HR6 $3.00 ea. (8) 12CA5 $2.00 ea.
(2) 6SG7 $2.50 ea. (4) 12C5 $2.00 ea.
(5) 6SH7 $2.00 ea. (6) 12DB5 $2.00 ea.
(20) 6SK7 $2.00 ea. (3) 12FX5 $2.50 ea.
(1) 6SJ7GT $4.50 (6) 12AQ5 $2.00 ea.
(10) 6SJ7 $2.00 ea. (4) 12SA7 $3.50 ea.
(6) 6AK6 $2.50 ea. (4) 12SF7 $3.50 ea.
(8) 6BH6 $3.00 ea. (4) 12SQ7 $4.00 ea.
(9) 6AS5 $2.00 ea.
(10) 6BF5 $2.00 ea.
(6) 6CZ5 $4.50 ea. (6973 sub in most audio circuits)

(4) 6DT5 $2.00 ea.
(1) 6DW5 $2.00
(5) 6GC5 $2.00 ea.
(5) 6DE6 $1.50 ea.
(5) 6AH6 $2.00 ea.
(3) 6BD6 $1.50 ea.
(10) 6CU5 $2.00 ea.
(5) 6DB5 $1.50 ea.
(3) 6EW6 $3.00 ea.
(12) 6SA7 $2.00 ea.
(1) 6SB7 $2.00
(2) 6SF7 $2.00 ea.
(8) 6SJ7 $2.50 ea.
(15) 6SK7 $2.00 ea
(10) 6J7 $3.00 ea.

NOS Triodes

(10) 6AB4 (this is half a 12AT7) $2.50 ea.
(25) 6AF4 $2.00 ea., 10 for $19.00
(1) 6AM4 $1.50
(17) 6BC8/6BZ8 $2.50 ea.
(10) 6BK7B $2.50 ea.
(15) 6BN4 $2.50 ea.
(3) 6BS8 $3.50 ea.
(6) 6BZ7 $2.50 ea.
(9) 6CM7 $2.00 ea.
(3) 6CS7 $3.50 ea.
(10) 6CY7 $2.50 ea.
(8) 6DE7 $2.50 ea.
(8) 6DR7 $4.50 ea.
(10) 6ER5 $1.50 ea.
(1) 6ES5 $2.00
(8) 6FQ5A/6GK5 $4.50 ea.
(5) 6FH5 $3.00 ea.
(4) 6FY5 $1.50 ea.
(20) 6GU7 $4.00 ea.
(50) 6J6 $1.00 ea.
(4) 6JK8 $2.25 ea.
(4) 6K5GT $2.50 ea.
(40) 6S4A $2.00 ea., 10 for $19.00

All tubes (even new) are tested on a TV-7B military transconductance tester. Many other numbers in stock at very good prices, including thousands of triode/pentodes, and odd voltage tubes. Most miniature odd voltage tubes are $1.00 or less! Also many used tested tubes available at half price.

Shipping is free with a $50.00 purchase, otherwise it's additional (usually $3.00 for Priority Mail). Please e-mail me if interested. Thanks.

1918. Camcorder that sees through clothes?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-19 00:00:00 UTC
From: iftikhar@my-dejanews.com
Message-ID: <6rdfsu$1or$1@nnrp1.dejanews.com>
Source record: 134559

Is it neccessary to use red filter with that new Sony camcorder to see through clothes or its just a rumour because some say it does not work & some say it works.This is kinda interesting since its on the news & even Howard Stern wants to try it out.So if any1 has info about this camcorder & how to use this feature please let me know. Thanx.

>
>Thanks,
>Harry Reed, AB7YF
>

Hi Harry. Well, I've never seen the 850 manual on-line but there are a
couple of great articles at the following URL that describes operating tips and
hidden features of the 850.
It's a must-have for every 850 owner.

The URL is:
ftp://oak.oakland.edu/pub/hamradio/mods/

Go to the KENWOOD directory and look for the 850 mods.....I believe that there
are 3 articles.

I've had my 850 for over 6 years now and I wouldnt part with it for
anything....well, maybe a FT-1000D. The 850 has been a great rig. No
problems to date.

The only annoyance occurs when you have a tnc hooked up to the ACC2 port in the
rear of the radio. There is a nasty buzz on your audio if you use the
microphone for phone in ssb.
Kenwood says to properly adjust your ALC but that doesnt come close to a
solution.
I seem to recall seing a mod to replace some surface mount chip resistors in
the rig but it seemed to be an extreem mod for such a minor inconvience.
Whenever I want to work phone, which is rare, I just unplug the tnc from the
ACC2 port.

Let me know if you have any questions.

Have a good one!

1927. Repeater duplexer HELP!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-19 00:00:00 UTC
From: srwhite@ibm.net
Message-ID: <35da643a.0@news3.ibm.net>
Source record: 134568

I am having trouble with the duplexer for my repeater. I have a Sinclair Hybrid Ring (Yes, that's correct) for 2 meters with 600kc offset. The antenna system was recently given a clean bill of health so I have ruled that out at a cause. The duplexer itself was tuned using a spectrum analyzer and signal generator. The radio section was checked to see that RF wasn't getting in internally and it wasn't.

Okay, now to the problem... When the repeater is in transmit, noise is getting into the receiver, and I'm not just talking about what could be called typical desense, a general increase in white noise. Actually what I get is a static crackling sound on weak signals... Switch off the transmitter and the signal cleans right up. Sounds like a connector is loose, but everything has been checked.

Cabling on the RX side is brand new... All connections were cleaned of tarnish. Not familiar with hybrid ring?? Let me know I can send details.

Help!

Thanks,
Steve White

Subject: Camcorder that sees through clothes?
Is it neccessary to use red filter with that new Sony camcorder to see
through clothes or its just a rumour because some say it does not work &
some
say it works.This is kinda interesting since its on the news & even Howard
Stern wants to try it out.So if any1 has info about this camcorder & how to
use this feature please let me know. Thanx.

Like new Amp International LK450-NTC HF amp. Runs a single 3-500Z for
1000 watts PEP.This is the "no tune" model. Low time on tube. No manual.
Better hurry this is a great little amp that looks and works like new!
$450.00 + shipping.

(15) 6SK7 $2.00 ea
(10) 6J7 $3.00 ea.
NOS Triodes
(10) 6AB4 (this is half a 12AT7) $2.50 ea.
(25) 6AF4 $2.00 ea., 10 for $19.00
(1) 6AM4 $1.50
(17) 6BC8/6BZ8 $2.50 ea.
(10) 6BK7B $2.50 ea.
(15) 6BN4 $2.50 ea.
(3) 6BS8 $3.50 ea.
(6) 6BZ7 $2.50 ea.
(9) 6CM7 $2.00 ea.
(3) 6CS7 $3.50 ea.
(10) 6CY7 $2.50 ea.
(8) 6DE7 $2.50 ea.
(8) 6DR7 $4.50 ea.
(10) 6ER5 $1.50 ea.
(1) 6ES5 $2.00
(8) 6FQ5A/6GK5 $4.50 ea.
(5) 6FH5 $3.00 ea.
(4) 6FY5 $1.50 ea.
(20) 6GU7 $4.00 ea.
(50) 6J6 $1.00 ea.
(4) 6JK8 $2.25 ea.
(4) 6K5GT $2.50 ea.
(40) 6S4A $2.00 ea., 10 for $19.00
All tubes (even new) are tested on a TV-7B military transconductance tester. Many other numbers in stock at very good prices, including thousands of triode/pentodes, and odd voltage tubes. Most miniature odd voltage tubes are $1.00 or less! Also many used tested tubes available at half price.
Shipping is free with a $50.00 purchase, otherwise it's additional (usually $3.00 for Priority Mail). Please e-mail me if interested.
Thanks.

Subject: FT-50 vs. VX-1R
>>With ADMS software, you can do this little trick: check the 'Allow any
band'
>>button (or was it in the .ini file?)...

It's the .INI file - folks, please go to
http://www.icongrp.com/~sllewd/
for details on this modification!
>>For example, in VHF band, I have 145.65, 166.55, 453.95, 79.6, and 85.35
>>MHz, and it will scan no problem.
Mike - what VX-1R firmware code do you have???
>>I like the punch and heavy-duty feel of the 50, and also like the size
>>and weight of the VX-1.
My sentiments exactly. I am constantly amazed with my Vertex VX-10 and
Yaesu
FT-50RD...I mean, what other HT can you hold comfortably in your left hand,
and (a) change channels, (b) adjust volume, (c) key the mike, (d) open
squelch, and (e) turn on the lamp - ALL with ONLY using your thumb??!!

> 73, TINY W9ZRO
I've had the exact opposite problem, the old button was so big that it
always
came on if anything bumped it. I finally replaced it and have yet to have
the
problem. The new button is slightly shorter than the old one, alleviating
the
problem.
Having performed the swap and having taken the radio apart to do it,
let me

tell you, it was pretty easy, easier than I thought. Just two screws to unscrew, and
the rest of the case unsnaps and slides apart. The only frustrating part was making
sure the rubber seals went into place properly when reassembling.

>Harry Reed, AB7YF
>

Hi Harry. Well, I've never seen the 850 manual on-line but there are a
couple of great articles at the following URL that describes operating tips
and
hidden features of the 850.
It's a must-have for every 850 owner.

The URL is:
ftp://oak.oakland.edu/pub/hamradio/mods/
Go to the KENWOOD directory and look for the 850 mods.....I believe that
there
are 3 articles.
I've had my 850 for over 6 years now and I wouldnt part with it for
anything....well, maybe a FT-1000D. The 850 has been a great rig. No
problems to date.
The only annoyance occurs when you have a tnc hooked up to the ACC2 port in
the
rear of the radio. There is a nasty buzz on your audio if you use the
microphone for phone in ssb.
Kenwood says to properly adjust your ALC but that doesnt come close to a
solution.
I seem to recall seing a mod to replace some surface mount chip resistors
in
the rig but it seemed to be an extreem mod for such a minor inconvience.
Whenever I want to work phone, which is rare, I just unplug the tnc from
the
ACC2 port.
Let me know if you have any questions.
Have a good one!

Subject: Logging program for Amateur Radio?
LOG-EQF also has this feature, and, as with the rest of the program it
works great. Use it in DOS, WIN 3.1, WIN 95 or WIN 98. About the only thing
it won't run on is an abacus.

From: srwhite@ibm.net
Subject: Repeater duplexer HELP!
I am having trouble with the duplexer for my repeater. I have a Sinclair
Hybrid Ring (Yes, that's correct) for 2 meters with 600kc offset. The
antenna
system was recently given a clean bill of health so I have ruled that out
at
a cause. The duplexer itself was tuned using a spectrum analyzer and
signal
generator. The radio section was checked to see that RF wasn't getting in
internally and it wasn't.
Okay, now to the problem... When the repeater is in transmit, noise is
getting into
the receiver, and I'm not just talking about what could be called typical
desense,
a general increase in white noise. Actually what I get is a static
crackling sound
on weak signals... Switch off the transmitter and the signal cleans right
up.
Sounds like a connector is loose, but everything has been checked.
Cabling on the RX side is brand new... All connections were cleaned of
tarnish.
Not familiar with hybrid ring?? Let me know I can send details.
Help!
Thanks,
Steve White

n3fif@my-dejanews.com wrote:
> I'm interested in getting a new HT. Dual band would be nice, however not a
> must. I am open to all suggestions.

The only intelligent suggestion, in my opinion, would be to join your local Amateur Radio club and learn from others in your region what is happening on the amateur bands.

Only when you learn what's AVAILABLE to you will you be able to make a sound, intelligent equipment purchase.

Heck - after joining clubs in my area, I bought a HT (actually two of them) that I would hardly ever recommend as a "first HT" to anyone - although it is a first-class unit. After I did a little homework and saw what was available, I purchased Standard's C228a 220MHz HT. It suited MY needs perfectly then (still does), and I was thoroughly satisfied with the purchase.

So join your local group. Find out what band(s) you want to be involved with. Get equipment recommendations from others who live near you who are doing EXACTLY what you want to do.

If you need assistance locating a local club, please go to

http://www.arrl.org

and look 'em up!

From: #fleet@mbl.edu
Message-ID: <#fleet-1908981030440001@pom1.mbl.edu>
Source record: 134582

I've noticed a couple of references to the fact that the price is now 999.95 for this radio. The assumption is that it's the devaluation of the yen, if you look at other Icom equipment prices they haven't changed. I would think Icom is about to announce a replacement (maybe competition for the announced FT100) radio and they're trying to sell as many 706's as possible before then!!

>use this feature please let me know. Thanx.

All CCD imagers are sensitive to IR. This is normally considered a problem, and an IR blocking filter is included in the optical block of the camera to stop this. The camcorder in question appears to have left out this IR blocking filter to allow it to be used as a quasi-nightscope.

By using a filter which passes IR and blocks most visible light, IE the red filter, the camera can be used for IR imaging in areas with high ambient visible light. Without the filter blocking visible light, the image in a lighted area would be dominated by wavelengths in the visible range. But if you operate in a darkened area, the red filter is not necessary since there is little energy in the visible range present, so the IR signal will dominate.

Cheaper cameras don't always use a good IR blocking filter, so the Sony model may not be unique in this area. If you already have a camcorder, point an IR remote control at it and see if you can see the IR LED. If you can, your camera, like the Sony, doesn't have an effective IR blocking filter. If it is also sensitive enough to work in low light conditions, it'll perform like the Sony does.

What you describe is the classic "desence" popcorn popping , crackling
sound on weak signals.

>
> Cabling on the RX side is brand new... All connections were cleaned of tarnish.
> Not familiar with hybrid ring?? Let me know I can send details.

Is it a new problem? Or has it always been there since you built the
repeater?
What type of radio equipment? Power levels? Rx pre-amp? Do you
remember how much isolation you measured with the sig gen/ spectrum
analyser?

As you have noticed, close spaced freqs leave little room for error.
Another thought, if you still have access to a spectrum analyser, try
tuning the transmitter for cleanest sig, not maximum power out. Or you
could tee into the antenna line with a sig gen and iso-tee, and tune the
transmitter for minimum desence on a really noisy signal. Sometimes you
can get another 10 dB of isolation that way.

Icom IC-821H Dual Band Sattelite Xcvr, covers 2M & 70 CM. This is
Icom's top of the line sattelite rig and works great as a base station
too. In mint condition, and complete with blank warranty card, all
original docs and packaging. Only $1050 Shipped.

SOLD Icom IC-W32A 5 watt dual band HT

SOLD Yaesu FT-8100 Dual Band Mobile Xcvr

All the radios listed above are my personal radios, kept and used in a
NON-SMOKING environment. They are like new and are only a few months
old. No mods, tweaks, or additions. They are guaranteed to be as
represented, and I'll allow a 5 day return privelege on any of them.

TNC's:
KAM Plus dual port TNC, supports HF and VHF packet, as well as CW,
RTTY, AMTOR, PACTOR, and a variety of other modes. Firmware level is
8.2. This unit works perfectly, is mint in appearance, and ready to go
for only $245 shipped CONUS.

SOLD KPC-9612 1200/9600 TNC

Antennae:
SOLD M2 Eggbeater for 2 meters
SOLD M2 Eggbeater for 70 cm
SOLD Diamond X50A dual Band compact base antenna
SOLD Cushcraft 124WB wideband 2 meter beam

Larsen Dual Band NMO 2/70 mobile antenna, including trunk lip mount,
coax. Add a PL-259 and you're ready to go. Used only a few months,
perfect working condition, no damage of any sort. $40 shipped CONUS.

Alpha Delta DX-EE shortened dipole, covers 40-10 meters, and WARC
bands with tuner. Compact in size, I used it in my attic. Will ship it
assembled so you can uncoil it and use it immediately. It is
unmodified and has not been trimmed or tweaked. Since it was used in
the attic, has no visible stains or corrosion. Complete with original
docs. Only $50 shipped CONUS.

MFJ-259B HF/VHF Antenna Analyzer. this is the NEW version of the best
inexpensive antenna tool on the market. This one is only two months
old, and was used briefly at field day. Still using the original set
of batteries. Also includes the foam carrying case, and a 12 volt
external power supply. List value of all this is more than $270, but

I'll ship it to you for $210 and pay the freight in the lower 48.

Ameritron RCS-8 Remote Antenna Switch. This will switch 5 antennae to 1 radio, or vice versa. Rated up to 250Mhz, I have used these for 2 meters and below with no problems. Includes local switch box, remote relay box, and I'll include about 60' of PREWIRED connector cable so you don't have to do anything but plug it in. Only $95 shipped CONUS. (1 unit available)

MFJ extended rubber duck for dual-band HT. Full quarter wave on 2 meters for enhanced performance. Like new and fully functional. Only $12.50 shipped CONUS.

SOLD MFJ portable 2 meter j-pole

MFJ-1750 5/8 wave 2 meter ground plane antenna. This is NEW and is in UNOPENED original box. Cheapest good antenna you can get anywhere. Pay me $20 (list price) and I'll ship it ***FREE*** in the lower 48, and no tax either!

Accessories:
BC-601 rapid smart desk charger, and two Icom BP-173 battery packs. These packs were used as reserve spares, and have been used only one time. A complete accessory setup for someone, and priced at only $125 shipped CONUS.

JPS NIR-10 DSP in good condition with box and docs. $85 shipped CONUS.

Astron RS-20A Power Supply, 25A rated in perfect condition. Like New! $75, will split freight.

Icom HM-54 Speaker/Mic for IC-W32A HT, excellent $45 Shipped.

Icom HM-46A Speaker/Mic for IC-W32A HT, excellent $45 Shipped.

Van Gordon 1:1 BALUN New in the package, $10 shipped CONUS.

MFJ-8621 Packet Tranceiver, works fine as a packet rig on it's stock freq of 145.01. Unit is in mint condition, working perfectly, with original docs and box, $80 shipped CONUS.

Diamond SX-200 SWR Bridge, in as-new condition with original docs and box. Bought an MFJ-259B (great piece of gear!) right after I bought this, and never used it. $60 shipped CONUS.

The Legal Stuff:
Terms are postal M.O. prepayment, I'll supply phone # and references if requested. Shipment will be via Priority Mail for small items, UPS ground for radios and expensive items. All shipping is included EXCEPT where noted.

Thanks and 73,
Ron Ricketts WA5VFA

Yes it works, it must be outside in sunlight and only works with certain colors (ex: Black, dark blue, dark green) and you have to use a filter and put it into night-vision mode. Don't have one, don't want one, but saw it done at a local store after the news was reported.

Radio Shack is having a sale right now on Koss Speed Zone headphones for use with scanners and communications radios. They are $49.99 down from $59.99. I bought a pair for use with my FT-757GX II. They are monaural and designed for use in a high noise environment like racing tracks (hence the name Speed Zone). The part number is 20-284 and you may have to have one shipped to your store if you do not live near a major race track like Indy or Daytona (there were none to be found in the New York City area and Radio Shack told me they were all sent to racing towns. But the store can get them if you want).

I can agree with Hasan, I have been using the Log-EQF prgm with the 847 and it works great.
Tks to the hard work of Tom Dandrea (N3EQF , of course), he got it working in less than a week.
To those registered users, the patch for Version 8.78 (need new version for the 847 because it require main prgm rework along with the Rig file) will prob be up today at the site;
http://www.itis.net/eqf

Unreg'd users can chk out the working version (minus utils and extras) from the same site.

Tom AA2VK
(ps ... normal deal... just a very satisfied user!)

It's a problem with the off-switch curcuit,... Yeasu will repare under warranty.
Otherwiise to stop the problem , it requires a half second hold on the off button
after it appears to turn off.
Solved my problem (must drain the curcuit allowing full current cutoff)

What's the best replacement antenna for the Yaesu FT-50R? The stock antenna is not very good.

I heard that the Comet SMA-501 good and is only 1.5" tall - but how's the performance?

Anyone like to share their experience.

Jerry.

pls. post your replies here.

An excellent suggestion. You'll probably get plenty of opinions about
what models are best and why. Not only that, but these people will
probably let you *use* their HT's for a few minutes at least, and you'll
find out whether they fit in your hand, whether the controls make
sense to you, how heavy the are, etc.

I have a bad SL6440C IC that needs replacing in a British radio. Have had great difficulty trying to locate such a beast. I know that Plessey makes (made) it, but don't know if there are other sources.

If anyone has a source for these (especially in the US) I would be most greatful. Please email any responses to swithrow@nyx.net

Thanks in advance.

I recently purchased a Kenwood TH-22AT handheld, and would be interested in purchasing some accessories for it. I am looking in particular for extra batteries (especially 9V or AA case), external microphones/speakers, and antennas that would attach to a car for mobile operation. This is a standard BNC connector, so most 144mhz antennas would work. I am also looking for DC/cigarette lighter adaptors.

Thanks,
Eric

It's an excellent meter for the money. I had the Yaesu YS-60 and the WM-1
far exceeds it in performance, etc. One thing though on the WM-1: I had to
adjust the high power reading with a Bird in line since the Autek was off by
about 200 watts at the 1500 watt level.....W4VR

I just verified with Yaesu that the "clicking" VX-1R HTs exhibit during a battery charge cycle is, indeed, quite normal. It occurs when the battery charging circuit switches to a slow/trickle mode.

Sorry if y'all already knew this...it sure was weird hearing it the first time this morning!

1978. Re: Best replacement antenna for Yaesu FT-50R HT?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-20 00:00:00 UTC
From: kjsmith@fletch.fix.net
Message-ID: <6rhttc$qbr@fletch.fix.net>
Source record: 134319
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment

I've tried a number of antennas for the FT-50, and have a fair amount of money invested in antennas that I never use (during that search for the "perfect" antenna). Here are my opinions (FYI: I use mine for ham, but also do extensive public safety listening, from 143-173 MHz and 430-470MHz).

Stock Antenna: Works ok in the ham bands, awful out of band.
Icom FA-S2/70: My "stubby" antenna of choice. Better performance than the stock antenna out of band, but pretty horrid on VHF (esp. working simplex).
Diamond 6" rattail: The worst antenna I've ever used. Rx is better with a paperclip than with this antenna.
Premier 6" rattail: Only slightly better than the Diamond. Junk.
Comet SMA-503: My antenna of choice. Excellent performance, kinda long, but so thin and flexible that it's quite unobtrusive.
Comet SMA-3: Seems to work a little better than the SMA-503, but the extra size isn't worth it.

Go with the Comet SMA-503. It's a great antenna. Trying to save a few bucks buying the Premier (ANLI...whatever) will cause you major grief. I've never owned an ANLI product that I've liked. The Icom FA-S2/70 is the smallest antenna I'd bother with, and frankly, I haven't used this one much since I purchased the Comet SMA-503.

For sale:
VHF Motorola Micor repeater.
The Micor was a mobile unit that I converted to a repeater. It has a COR
and a small amount of audio control. It does not have an ID'er.
There is a GE power supply with it.
This unit is on 146.94/146.34 presently.
It can be recrystalled and retuned for any part of this band.
The repeater comes in a rack cabinet with front door and sides.
The cabinet is 48" high and has wheels.
The duplexer is a six can telewave.
GE Power supply: 13 volt 10 amp Magnetic regulated.$100.00 Can or $68.00 US
Cabinet 4' 19" rack with door, sides and wheels. $250.00 Can or $170.00 US
Motorola Micor with Motorola preamp..30 watts.. $125.00 Can or $85.00 US
TeleWave TPRD 1556 6 can duplexer..Cost $1,370.00 US will sell for $800.00 C
an

or $544.00 US .. The whole package would be $1000.00Can or $680.00 US
I know what it cost me but I will be reasonable. Make me an offer.
I will sell it whole or in pieces.
If you are interested and would like any further information, just send me
some email.

I have a Uniden VHF repeater/base station.
It is in a case measuring 5"h x 17"w x 14"d
It comes with a built in power supply.
I got it with crystal for 151.115 Tx and 153.230 Rx. I have since tuned it
to 157.530 Rx and 163.XXX It seems to work almost anywhere I tune it..
The front panel has a switch that says repeat and local. This turns the COR
on or off..
It has a CTCSS encoder decoder so it can be used as a subtone repeater..
An ID'er could be installed easily.
The power output is around 10 watts.
I have no service manual on it.
This would make a nice unit as a club station.
I am asking $ 150.00 Canadian or $102.00 US OBO

It seems to me that the Federal Code of Regulations (Part 97 and all
that)
prescribes what are legitimate motives for being a ham. It doesn't
use quite the same words, but I seem to recall specifying public
service,
maintaining technical and communications skills, etc.

We're not each supposed to be making up our own motives.

Best depends a lot on your criteria. Mine was "small". I only use 440, so
I stuck a quarter wavelength of very flexible
wire into a sma connector. Now you can stick the radio in your pocket
without getting poked in the eye.
Works about as well as the stock duckie. It's an even better choice for a
VX-1R. You have to search for the radio in
your pocket.

Icom IC-821H Dual Band Sattelite Xcvr, covers 2M & 70 CM. This is Icom's top of the line sattelite rig and works great as a base station too. In mint condition, and complete with blank warranty card, all original docs and packaging. Only $1050 Shipped.

Astron RS-20A Power Supply, 25A rated in perfect condition. Like New! $75, will split freight.

BC-601 rapid smart desk charger, and two Icom BP-173 battery packs. These packs were used as reserve spares, and have been used only one time. A complete accessory setup for someone, and priced at only $125 shipped CONUS.

Larsen Dual Band NMO 2/70 mobile antenna, including trunk lip mount, coax. Add a PL-259 and you're ready to go. Used only a few months, perfect working condition, no damage of any sort. $35 shipped CONUS.

Alpha Delta DX-EE shortened dipole, covers 40-10 meters, and WARC bands with tuner. Compact in size, I used it in my attic. Will ship it assembled so you can uncoil it and use it immediately. It is unmodified and has not been trimmed or tweaked. Since it was used in the attic, has no visible stains or corrosion. Complete with original docs. Only $50 shipped CONUS.

Ameritron RCS-8 Remote Antenna Switch. This will switch 5 antennae to 1 radio, or vice versa. Rated up to 250Mhz, I have used these for 2 meters and below with no problems. Includes local switch box, remote relay box, and I'll include about 60' of PREWIRED connector cable so you don't have to do anything but plug it in. Only $95 shipped CONUS.

MFJ extended rubber duck for dual-band HT. Full quarter wave on 2 meters for enhanced performance. Like new and fully functional. Only $12.50 shipped CONUS.

MFJ-1750 5/8 wave 2 meter ground plane antenna. This is NEW and is in UNOPENED original box. Cheapest good antenna you can get anywhere. Pay me $20 (list price) and I'll ship it ***FREE*** in the lower 48, and no tax either!

JPS NIR-10 DSP in good condition with box and docs. $80 shipped CONUS.

Icom HM-54 Speaker/Mic for IC-W32A HT, excellent $45 Shipped.

Icom HM-46A Speaker/Mic for IC-W32A HT, excellent $45 Shipped.

Van Gordon 1:1 BALUN New in the package, $10 shipped CONUS.

MFJ-8621 Packet Tranceiver, works fine as a packet rig on it's stock freq of 145.01. Unit is in mint condition, working perfectly, with original docs and box, $70 shipped CONUS.

Diamond SX-200 SWR Bridge, in as-new condition with original docs and box. $50 shipped CONUS.

The Legal Stuff:
Terms are postal M.O. prepayment, I'll supply phone # and references if requested. Shipment will be via Priority Mail for small items, UPS ground for radios and expensive items. All shipping is included EXCEPT where noted.

Thanks and 73,
Ron Ricketts WA5VFA

>transmit on 6 meters. The phones, of course, operate at 49 MHz.

[remainder of sad tale snipped]

Marty ... unless you are prepared to buy him new phones (a course
of action I would NOT suggest, since the problem is certainly NOT
your fault), I would suggest that you explain to the best of your
ability
that the problem/deficiency is with his phones and NOT with your
station. (The ARRL may be able to provide some materials that
would help you explain this ...)

His phones are clearly subject to fundamental overload ... again,
NOT your station's faut. The reality is that he has NO recourse
against you, as such unlicensed devices are at the bottom of the
RF "food chain" and are SPECIFICALLY denied ANY and ALL
protection from licensed services ... they must not interfere with
licensed services and must accept any interference they receive
from properly operating licensed devices.

A 900 MHz phone would likely solve his problem ... at least until
you decide to operate in THAT band :-)

As far as his being "cut off from the world" ... that's his fault for
buying the cheapest piece of crap phones around (46/49 MHz).
After all, what does he expect for a product that can be bought
new today for $19.95???

I would politely explain HIS problem to him and politely refuse
to allow him to make it YOUR problem ... again, after explaining
reality to him in a kind and non-agressive way.

> Sounds like a connector is loose, but everything has been checked.
>

I found a problem like this was caused by loose things on the tower. One of them was the guy wires. Try shaking the tower while a weak signal is being received and the transmitter is on.
Not likely, but another problem was found in a set of phelps Dodge cavities. The cavities were sent back to them, but came back with the same problem. Turned out to be we were mounting the cavities upside down and about a table spoon full of solder droppings were in one of the cavities. They fell to the botom when the cavities were setting on the floor, but fell in the 'works' when they were inverted.

Motorola GP-68.

Anybody stateside have one of these? Anyone use it for 2M ham operation? As far as I can tell these are scarse in the US but are widely used overseas (Motorola intended them for the overseas market). I rarely see anything about the GP-68 from US residents/hams or anyone else in the newsgroups. I know some of you folks out there have one of these nifty radios and I just want to know what you think about them!

Just curious.

The exposed end of a colour negative film makes a really good Visible light filter a few layes only pass IR. IF you look at the film with an IR passing visible light filtred camera it looks transparent! These cameras are only near IR not Far IR which means they are not thermaly sensetive and require quantities of IR ilumination (plenty available during the day!!!). Far IR detectors require cryogenic cooling with liquid nitrogen or a peltier effect device. (othervise they are swamped by local thermal noise!

Happy viewing. Most light synthetic clothing is IR transluscent.
Cheers
ERIC.

Source record: 134372

Wonder if anyone else has had similar problems with this trcvr?
The radio is set up in my car with the remote head harnessing fitted (using the shortest of the 2 cable options available).

1) From time to time, the radio will tx at 5W & perhaps 10W, but at 20W/50W the tx power level bar will oscillate very rapidly and the radio will not tx. THIS IS NOT ASSOCIATED WITH ANY LOW VOLTAGE TYPE PROBLEM! (at least not in my case).
I have virtually convinced myself that the problem is due to RF on the DC leads from the radio coupling into the remote head harness but cannot conclusively tie it down to that. Generally speaking if the problem manifests itself and I seperate the cables a little better, it seems to start working correctly. However, another day when I go back to try and work on the problem, I cannot re-create it by having the cables closely coupled.

2) The radio lately, when going back to rx after tx had the audio muted. Opening the squelch made no difference. S meter was functioning. (No it is not associated with tone squelch being enabled).
Powering off/on, then physically disconnecting trcvr from power source did not cure problem. However, changing to another memory channel made the rx burst into life and it was then OK back on original frequency. Weird.

Any similar experiences or relevant comments?

Alan

Hi Marty I had the same problem but it was with my wife and our cordless phone. I tried all kinds of things to the phone and station. After many hours of testing and troubleshooting the solution was quite simple. I bought a 900 mhz phone. That took care of everything. Iwould have been money ahead to just do that in the beginning. I fello ham here that lives in town has the same problem you do.His neighbor had been a good one no complaints of his antenna hanging over her yard until she could no longer use her phone which she did alot. He fixed the wired phone but her faviorte was the cordless. I made the suggestion of the 900mhz and he did after a couple more weeks. Neighbor happy ham happy. So I would belly up to the bar and get hi a 900mhz. You can get them for under $100 now I believe it will be money well spent. When he sees that it works I bet he gets another one himself. Also the 900mhz works alot better anyway no static fading etc. Good luck 73's Larry WA9VRH

2027. Yaesu FT50 Battery Drain - SOLVED !

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-20 00:00:00 UTC
From: rick1959@juno.com
Message-ID: <6rh5cm$4t8$1@nnrp1.dejanews.com>
Source record: 134374

To All, With help from several readers of the thread "FT50 Battery Drain", I was able to get this info regarding mod. Hope it helps ! Rick Flynn N1YYH

YAESU FT-50 Battery Drain (while Switched Off) Repair-
From phone call to Yaesu Tech 19 Aug 98.

Open the back of the radio.

Locate a corner of "Control Unit" where locations R2-102 and R2-103 surface mount resistors reside. These locations, I'm told by Yaesu Tech, should be easy to find with out a schematic. I haven't looked myself, but I've heard this may not be as easy as Yaesu says.

Replace existing resistor at location D2-102 with Yaesu P/N J24185563.

Replace existing resistor at location R2-103 with Yaesu P/N J24185103.

After this mod, you should have no more battery drain than would be normal for the Ni-Cad's normal discharge rate.

A couple of observations:

1. These are small, hard to unsolder/solder parts. Not for the inexperienced solderer ! 2. Yaesu can do this repair for you, BUT I understand they will also modify the radio to NOT receive cellular Freq's. So you may want to have someone else do this, if it is an important issue to you. 3. Yaesu will send you these parts FREE if you call their Parts Dept. at (562)404-2700 (Yaesu USA) BUT, does anyone know if there is a readily available substitute part(s) for this application ? 4. SUPPOSEDLY, FT-50's affected were produced for a time, up until a few years ago. BUT, does anybody have better handle on this ? 5. You'll know you radio has a problem if it loses a charge in a week or two with battery attached. 6. Recent vintage (within the past year or so ?) don't have this problem, I'm told.

I sold one FT50 awhile back for this very issue. Hopefully, this will help other frustrated FT-50 owners, to once and for all, solve this problem.

Rick Flynn N1YYH

Wonder what your neighbor would do when his 49Mhz cordless
picks up baby monitors, or the "kiddy" walkie talkies that also
operate on 49Mhz? Like you told him, read the FCC notice on the
base unit of the phone or in the owners manual. If his cordless phone
was causing interference to your 6mtr operations, what would he do?
Probably nothing. His best bet is the newer 900Mhz or the old fashioned
twisted pair phone. This will cure his problem of listening to you call CQ
or ragchewing, the baby lullabies, baby crying, or Johnny and Joey down
the street playing secret agent and/or GI Joe! :)

2032. Need C64 Pinouts for Hamtext Program

Newsgroup: rec.radio.amateur.equipment
Date: 1998-08-20 00:00:00 UTC

I recently obtained a CP-1, the Hamtext cartridge for the C64 and all the manuals. However, the CP-1 to C64 cable was not included. The Hamtext manual does not contain the pin connections for the C64 user port. Does anyone have these?

I like the Diamond RH77CA, worked AO27 with it. Requires a adapter that I highly recommend is TIGHTLY attached. If it is not, the blinken center pin shears off FLUSH inside the SMA connector.

I use Xmlog and I like it alot. It's Freeware, obtainable from:
http://www.xmlog.com Check it out.
